Subject:
Proposed Groundwater Monitor
Chevron Environmental Manager
Lovington Paddock Remediation
Lea County, New Mexico
OGRID No. 4323
Case No. 1R272

Dear Mr. Billings:

At the request of Chevron Environmental Manager, Arcadis U.S., Inc. (Arcadis) is proposing to request the reduction of groundwater monitoring frequency for the Lovington Paddock site (Site).

The Site is located within the Lovington Paddock Unit, an active oil production field located in Lea County, New Mexico, and approximately 6.2 miles southeast of the City of Lovington (COL). The Site is in the south ½ of the southeast ¼ of Section 1, Township 17 South, Range 36 East in Lea County, New Mexico. The site coordinates are 32° 51' 31.09" N latitude, 103° 18' 05.41" W longitude.

Groundwater monitoring began at the Site in November 1998, and the Site is currently monitored semi-annually from a network of 25 monitoring wells. The Site groundwater flow is generally to the southeast. All monitoring wells with groundwater present are currently sampled during both sampling events. Several existing wells tend to go dry during the 3rd and 4th quarters due to pumping of nearby irrigation wells. The constituents of concern (COCs) in groundwater include benzene, ethylbenzene, toluene, xylenes (BTEX) and total petroleum hydrocarbons (TPH).

For additional site-specific background information please refer to the GHD, 2018 Groundwater Monitoring Report, dated July 30, 2019. The 2019 Groundwater Monitoring Report will be submitted by the end of the third quarter 2020.

The proposed monitoring well schedule and reduction of sampling is approved for the following wells: MW-CR, MW-D, MW-D2, MW-E, MW-F, MW-G, MW-J, MW-L, MW-M, MW-N, MW-Q, MW-R, MW-S, and MW-W. MW-R will be sampled if MW-P is dry or contains insufficient water to sample during the reduced sampling event. This plan is approved for the Chevron Lovington Paddock Remediation Company (CEMC), Site.

PROPOSED REDUCED SAMPLING PLAN

The following Workplan outlines the specifics of the proposed reduced sampling plan and the methodology for the selection of those monitoring wells. One semi-annual monitoring event will include sampling all site wells as currently conducted. The second semi-annual sampling event will be reduced to only sampling select monitoring wells based on the following proposed sampling methodology. The groundwater sampling frequency will be assessed yearly based on the results of the sampling events for the lifespan of the project and will increase to quarterly for a minimum of eight consecutive quarters prior to closure request for the Site.

CEMC also requests to defer TPH analysis for all wells sampled during the reduced second semi-annual sampling event as concentration trends have been established and there are currently no New Mexico Water Quality Control Commission (NMWQCC) standards for these constituents.

The following sections provide specifics for the proposed reduced groundwater monitoring plan:

Sampling Reduction for Non-Impacted Monitoring Wells

Site monitoring wells with COC concentrations reported below NMWQCC exceedance standards for two consecutive years or longer will not be gauged or sampled during the second semi-annual monitoring event.

The Site wells currently selected for reduction from the second sampling event include: MW-CR, MW-D, MW-D2, MW-E, MW-F, MW-G, MW-J, MW-L, MW-M, MW-N, MW-Q, MW-R, MW-S, and MW-W. MW-R will be sampled if MW-P is dry or contains insufficient water to sample during the reduced sampling event.

The previously referenced monitoring wells have been evaluated based on historical concentration trends, historical concentration trends of nearby monitoring wells, potential receptors, and the groundwater gradient.

The proposed reduction list of monitoring wells and associated laboratory analysis for the semi-annual events are presented on attached **Table 1** (Sampling and Analysis Plan).

The proposed Site monitoring wells that will be sampled during the reduced event are presented on **Figure 1** (Potentiometric Surface Map) and are presented with current groundwater constituent concentrations on **Figure 2** (Proposed Groundwater Monitoring Reduction Plan).

The Summary of Historical Groundwater Analytical Results is presented in **Table 2**.

CONTACT

Arcadis is prepared to initiate the scope of work immediately. If you have any questions or comments, please contact either Scott Foord by phone at 713 953 4853 or by e-mail at william.foord@arcadis.com or Greg Cutshall by phone at 859 327 4626 or by email at greg.cutshall@arcadis.com.

Notes:

- 1) RCRA Metals Analysis by Environment Protections Agency (EPA) Methods 6010B and 7470A.
- 2) Groundwater Quality by EPA Methods 160.1, 300.0, and 310.1.
- 3) Highlighted values indicate concentrations above NMWQCC Other Standards for Domestic Water Supply.
- 4) ¹ NMWQCC Human Health Standards Per NMAC 20.6.2.3103A.
- 5) ² NMWQCC Other Standards for Domestic Water Supply Per NMAC 20.6.2.3103B.
- 6) NA= Not analyzed
- 7) DUP = Duplicate sample
- 8) D = Dilution factors are included in the final results. The result is from a diluted sample.
- 9) * = Likely an order of magnitude higher than actual result; however reported value was verified by the laboratory

Note:

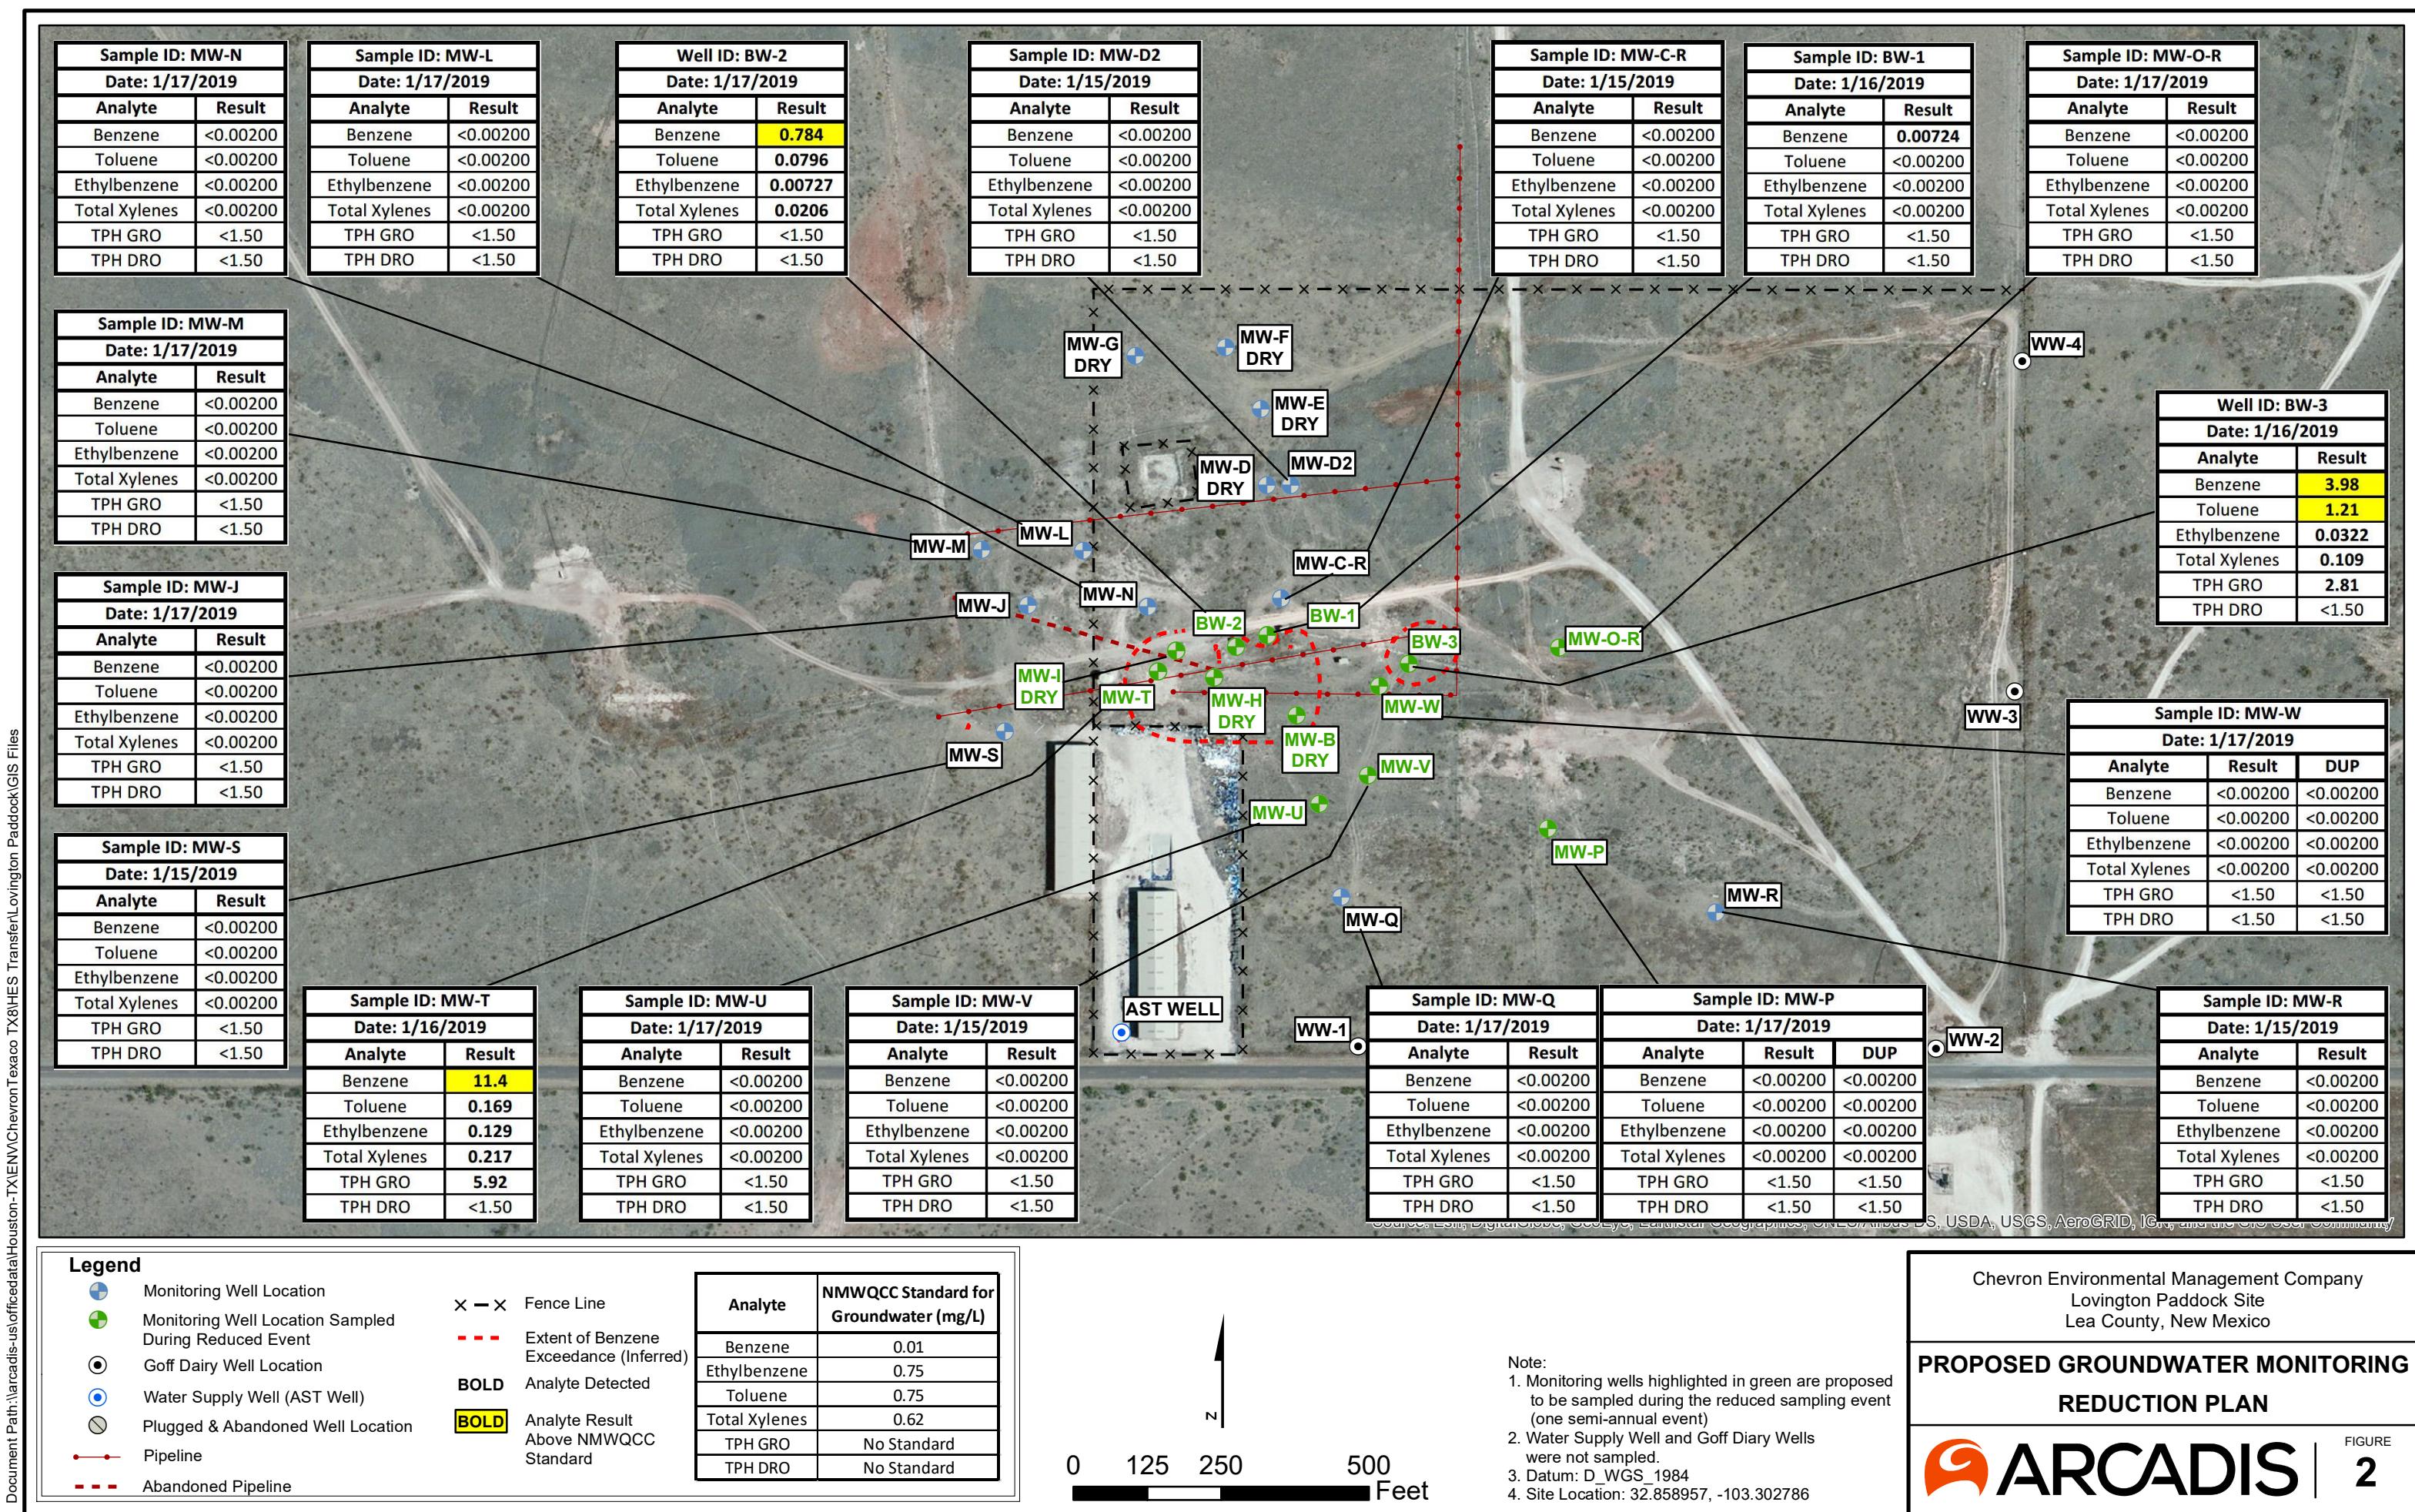

1. Monitoring wells highlighted in green are proposed to be sampled during the reduced sampling event (one semi-annual event)
2. Waterford Supply and Recovery Wells were not sampled.
3. Datum: D_WGS_1984
4. Groundwater gradient = 0.02 ft/ft
5. Site Location: 32.858957, -103.302786

CONDITIONS

Created By	Condition	Condition Date
michael.buchanan	The proposed monitoring well schedule and reduction of sampling is approved for the following wells: MW-CR, MW-D, MW-D2, MW-E, MW-F, MW-G, MW-J, MW-L, MW-M, MW-N, MW-Q, MW-R, MW-S, and MW-W. MW-R will be sampled if MW-P is dry or contains insufficient water to sample during the reduced sampling event. This plan is approved for the Chevron Lovington Paddock Remediation Site.	2/21/2025
