INCIDENT LOCATION: C-01-T26S-R33E

NMOCD REF. NO. NAPP2102637490

Pima Environmental Services, LLC (Pima) has been contracted by Devon Energy Production Company (Devon) to perform a site assessment, remediation, and prepare this Deferral Closure Report for a produced water release that occurred at the Seawolf 1-12 CTB 1 (Seawolf). The initial C-141 was submitted on January 25, 2021. This incident was assigned Incident ID NAPP2102637490, by the New Mexico Oil Conservation Division (NMOCD).

RELEASE INFORMATION

NAPP2102637490: On January 10, 2021, a pinhole leak in water piping off of the three-phase separator caused a produced water spill. The released fluids were calculated to be approximately 9 barrels of produced water. The C-141 Cause of Release states that all fluid remained on location but the C-141 also notes that the volume recovered was 5 barrels.

SITE CHARACTERIZATION

The Seawolf is located approximately twenty (20) miles west of Jal, NM. This spill site is in Unit C, Section 1, Township 26S, Range 33E, Latitude 32.07917228, Longitude -103.52616097, Lea County, NM. Figure 1 references a Location Map.

Per the New Mexico Bureau of Geology and Mineral Resources, the geology is in the Ogallala Formation and Alluvial and eolian deposits, and petrocalcic soils of the southern High Plains. Locally includes Qoa. The soils in this area are made up of Simona-Upton association, 0 to 3 percent slopes and Pyote and Maljamar fine sands, 0 to 3 percent slopes according to the United States Department of Agriculture Natural Resources Conservation Service soil survey (Appendix B). The drainage courses in this area are well-drained. There is a medium potential for karst geology to be present around the Seawolf (Figure 3). A Topographic Map can be found in Figure 2.

According to the New Mexico Office of the State Engineer, the depth to the nearest groundwater in this area is greater than 55 feet below grade surface (BGS). According to the United States Geological Survey (USGS), the nearest groundwater is 180 feet BGS. The groundwater information from C-04628-POD1, which is located approximately 1,026 feet to the north of this release area, establishes a lack of groundwater at 55' bgs. This POD was drilled and recorded by Atkins Engineering Associates, Inc. on June 9, 2022. The bore was left open for the required 72-hour timeframe then checked for saturation. No saturation or water-bearing soil was encountered; the well was then plugged on June 13, 2022. Closure criteria for the release at the Seawolf will be classified 51'-100' depth to groundwater section of Table 1 19.15.29.12 NMAC. The regulatory

limits are as follows: Chlorides should be less than 10,000 mg/kg, TPH (GRO+DRO+MRO) should be less than 2,500 mg/kg, BTEX should be less than 50 mg/kg, and Benzene should be less than 10 mg/kg. The closest waterway is Red Bluff Reservoir located approximately 24.29 miles to the southwest of this location. See Appendix A for referenced water surveys and water-related maps.

SITE ASSESSMENT, AND SOIL SAMPLING RESULTS

On February 20, 2025, Pima mobilized personnel to the site to begin collecting soil samples from the spill area to delineate the release. Forty (40) discrete samples were collected for the purpose of vertical delineation from eight (8) different sample points within the release area. These samples were collected from depths of surface, 1', 2', 3' and 4' bgs. Forty (40) discrete samples were collected from the edges of the release area from eight (8) different sample points for the purpose of horizontal delineation. These samples were collected from depths of surface, 1', 2', 3' and 4' bgs. One (1) sample was collected at 1' bgs in the pasture to serve as a background sample. A total of eighty-one (81) samples were immediately put on ice, jarred, and delivered to Envirotech Laboratories for official analysis of all constituents listed in Table 1 19.15.29.12 NMAC. All sample results can be found in the Data Tables in Figure 4. A corresponding Site Map can be found in Figure 5. Complete laboratory reports can be found in Appendix E.

REMEDIATION ACTIVITIES

On May 28, 2025, Devon dispatched a construction crew to begin excavating the affected area. The areas underlying S1, S2 & S8 totaling approximately 600 square feet were excavated to a depth of 1' bgs, removing approximately 23 cubic yards of contaminated material. The area underlying S3 totaled approximately 200 square feet and was excavated to a depth of 2' bgs, removing approximately 15 cubic yards of contaminated material.

After submitting a 48-hour sampling notification (Appendix C), Pima returned to the Seawolf to conduct confirmation sampling on the excavated area. Pima collected four (4) 5-point composite bottom samples labeled CS1-CS4 and four (4) 5-point composite sidewall samples labeled CSW1-CSW4. 5-point composite samples were collected representing no more than 200 square feet from the base and walls of the excavated areas. A total of eight (8) samples were immediately put on ice, jarred, and delivered to Envirotech Laboratories for official analysis of all constituents listed in Table 1.19.15.29.12 NMAC. All sample results can be found in the Data Tables in Figure 4. A Confirmation Sample Map can be found in Figure 7. Complete Laboratory reports can be found in Appendix E.

On June 6, 2025, an official laboratory report was received and confirmed that all contamination had been sufficiently removed. Clean backfill material was brought in and utilized to restore the excavated area, returning it to its original state. One (1) 5-point composite backfill sample was collected to ensure backfill material was clean. A complete Laboratory Report can be found in Appendix E. Photographic Documentation of these events can be found in Appendix D.

DEFERRAL REQUEST

In total, 38 cubic yards of soil were excavated and properly disposed of. Areas located beneath the separators and lines were not excavated as they would require deconstruction of equipment. These areas were fully delineated and do not show high levels of contamination, and do not pose imminent risk to the environment based on the depth to groundwater at the Seawolf. The gross impacts have been removed from the site via excavation and the limited residual impacts are located under the separators, preventing full excavation. Based on the excavation activities, and existing delineation data, Pima respectfully requests deferral of final remedial actions for this incident until the well is no longer

needed for production or further drilling operations, and the pad is reclaimed. At the time of reclamation, any residual impacted soil will be excavated and disposed of at a NMOCD approved disposal facility.

CLOSURE REQUEST

After careful review, Pima requests that this incident, NAPP2102637490 be closed.

Devon has met all applicable closure requirements outlined in 19.15.29.12 NMAC and respectfully submits this Deferral Closure Report for approval. Devon acknowledges that once this pad area is no longer needed for production or further drilling operations, a reclamation report must be submitted and approved, ensuring a minimum of four feet of non-waste containing earthen material. Additionally, a revegetation plan will be provided once the site achieves the required vegetative status.

QUESTIONS

Nature and Volume of Release (continued)	
Is this a gas only submission (i.e. only significant Mcf values reported)	No, according to supplied volumes this does not appear to be a "gas only" report.
Was this a major release as defined by Subsection A of 19.15.29.7 NMAC	No
Reasons why this would be considered a submission for a notification of a major release	Unavailable.
With the implementation of the 19.15.27 NMAC (05/25/2021), venting and/or flaring of natural gas (i.e. gas only) are to be submitted on the C-129 form.	

Initial Response

The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury.

The source of the release has been stopped	True
The impacted area has been secured to protect human health and the environment	True
Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices	True
All free liquids and recoverable materials have been removed and managed appropriately	True
If all the actions described above have not been undertaken, explain why	The spill was not in containment.

Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see Subparagraph (a) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
