**Re: Deferral Request**  
**Christmas 28 # 05**  
**Incident Number NAPP2407128665**  
**Lea County, New Mexico**

To Whom It May Concern:

Ensolum, LLC (Ensolum), on behalf of Contango Resources, LLC (Contango), has prepared this *Deferral Request* to document assessment, delineation, excavation, and soil sampling activities at the Christmas 28 # 05 (Site). The purpose of the Site assessment and soil sampling activities was to assess the presence or absence of impacts to soil following a release of produced water and crude oil. Based on field observations and soil sample laboratory analytical results, Contango is submitting this *Deferral Request*, describing delineation and excavation activities that have occurred and requesting deferral of final remediation for Incident Number NAPP2407128665 until the Site is reconstructed, and/or the well pad is abandoned.

#### **SITE DESCRIPTION AND RELEASE SUMMARY**

The Site is located in Unit K, Section 28, Township 22 South, Range 37 East, in Lea County, New Mexico (32.361986°, -103.170625°) and is associated with oil and gas exploration and production operations on private land.

On March 10, 2024, a well blowout occurred and resulted in the release of approximately 40 barrels (bbls) of produced water and 5 bbls of crude oil onto the surface of the well pad. Vacuum trucks were immediately dispatched to the Site and recovered approximately 40 bbls of produced water and 5 bbls of crude oil. Contango submitted a Release Notification Form C-141 (C-141) on March 11, 2024. The initial Form C-141 Report was approved on March 26, 2024, and was assigned Incident Number NAPP2407128665.

#### **SITE CHARACTERIZATION AND CLOSURE CRITERIA**

The Site was characterized to assess the applicability of Table I, Closure Criteria for Soils Impacted by a Release, of Title 19, Chapter 15, Part 29 (19.15.29) of the New Mexico Administrative Code (NMAC). Results from the characterization desktop review are presented below.

Depth to groundwater at the Site is estimated to be between 51 feet and 100 feet below ground surface (bgs) based on the nearest depth to groundwater data. The closest water well, United States Geological Survey (USGS) permit number 322127103102201, located approximately 785 feet west of the Site,

indicated a total well depth of 112 feet bgs, and a depth to water of 60.50 feet bgs, measured most recently on December 31, 2024. Referenced well logs are presented in Appendix A.

The closest continuously flowing or significant watercourse to the Site is a Playa lake, located approximately 5,189 feet east of the Site. The Site is greater than 200 feet from a lakebed, sinkhole, or playa lake and greater than 300 feet from an occupied residence, school, hospital, institution, church, or wetland. The Site is less than 1,000 feet to a freshwater well or spring. The Site is not within a 100-year floodplain or overlying a subsurface mine. The Site is not underlain by unstable geology (low potential karst designation area). Potential Site receptors are identified on Figure 1.

Based on the results of the Site Characterization, the following NMOCD Table I Closure Criteria (Closure Criteria) apply:

- Benzene: 10 milligrams per kilogram (mg/kg)
- Benzene, toluene, ethylbenzene, and total xylenes (BTEX): 50 mg/kg
- Total petroleum hydrocarbons (TPH): 100 mg/kg
- Chloride: 600 mg/kg

## SITE ASSESSMENT

On March 18, 2024, and April 1, 2024, Ensolum personnel visited the Site to evaluate the extent of the release, oversee delineation activities based on information provided on the C-141, and document visual observations. Delineation and field screening activities were completed. The release extent area was mapped utilizing a handheld Global Positioning System (GPS) unit and is depicted on Figure 2. Based on field screening results and visible staining, excavation of observed impacted soil appeared to be warranted. Photographic documentation was collected, and a photographic log is included in Appendix B.

## EXCAVATION ACTIVITIES

Between June 27, 2024, and February 5, 2025, impacted soil was subsequently excavated from the release area near production equipment and surface pipelines as indicated by visible staining and field screening results from delineation activities. Excavation activities were performed utilizing a backhoe and a transport vehicle to the maximum extent practicable (MEP). To direct soil removal, Ensolum personnel field screened soil for volatile organic compounds (VOCs) and chloride utilizing a calibrated photoionization detector (PID) and Hach® chloride QuanTab® test strips, respectively.

Following the removal of impacted soil, 5-point composite soil samples were collected every 200 square feet from the floor and sidewalls of the excavation. The 5-point composite samples were collected by placing five equivalent aliquots of soil into a 1-gallon, resealable plastic bag and homogenizing the samples by thoroughly mixing. Composite soil samples FS01 through FS63 were collected from the floor of the excavation at depths ranging between 3 feet and 5 feet bgs. Composite soil samples SW01 through SW12 were collected from the sidewalls of the excavation at depths ranging from the ground surface to 5 feet bgs. Confirmation soil sample CS01 was collected at depths of 0.5 feet and 1-foot bgs to define the lateral extent of the release within the area of requested deferral. The soil samples were field screened for VOCs and chloride in the same manner as described above. The sample locations were mapped utilizing a handheld global positioning system (GPS) unit and are depicted on Figure 3. Photographic documentation was collected, and a photographic log is included in Appendix B.

The soil samples were placed directly into pre-cleaned glass jars, labeled with the location, date, time, sampler name, method of analysis, and immediately placed on ice. The soil samples were transported under strict chain-of-custody procedures to Cardinal Laboratories (Cardinal) in Hobbs, New Mexico, or Eurofins Laboratories (Eurofins) in Carlsbad, New Mexico for analysis of the following constituents of concern (COC): BTEX following United States Environmental Protection Agency (EPA) Method 8021B; TPH-gasoline range organics (GRO), TPH-diesel range organics (DRO), and TPH-oil range organics (ORO) following EPA Method 8015M/D; and chloride following Standard Method SM4500 or EPA 300.0.

The final excavation extent measured approximately 12,200 square feet. A total of approximately 1,800 cubic yards of impacted soil were removed during the excavation activities. The impacted soil was transported and properly disposed of at the R360 Landfill Facility in Hobbs, New Mexico. The release occurred on an active well pad near production equipment and surface pipelines. The estimated area of remaining impacted soil measures approximately 1,475 square feet and, assuming a 5-foot depth based on the excavation soil samples FS47, FS50, and FS54, a total of approximately 277 cubic yards of impacted soil remains in place. The estimated area of remaining impacted soil and is presented on Figure 4.

## LABORATORY ANALYTICAL RESULTS

Laboratory analytical results for excavation floor soil samples FS01A, FS02, FS03A through FS06A, FS07B, FS08B, FS09 through FS22, FS24, FS25A, FS26A, FS27, FS28A through FS30A and FS31 through FS63, collected at depths between 3 feet and 5 feet bgs, indicated all COC concentrations were compliant with Site Closure Criteria. Sidewall soil samples SW01 through SW05 and SW07 through SW12 indicated all COC concentrations were compliant with Site Closure Criteria, successfully defining the lateral extent of the release. Laboratory analytical results for sidewall soil sample SW06 indicated chloride concentrations exceeded Site Closure Criteria. Laboratory analytical results for CS01 indicated all COC concentrations were compliant with Site Closure Criteria, successfully defining the lateral extent of the requested deferral area. Laboratory analytical results are summarized in Table 2 and laboratory analytical reports are included in Appendix C.

## DEFERRAL REQUEST

Due to active production equipment, including the pumpjack and concrete footing, and process piping present in the area, the remaining impacted soil along SW06 was not removed, and Contango is requesting deferral of final remediation. The estimated 1,475 square foot area of impacted soil remains in place. A total of approximately 277 cubic yards of impacted soil remains in place, assuming a depth of 5 feet bgs based on laboratory analytical results from excavation soil samples FS50, FS53, and FS54. The impacted soil is limited to the area beneath active production equipment and surface piping where remediation would require major facility deconstruction. The release extent has been vertically delineated by soil samples FS45, FS47, FS50, FS51, FS52, and FS53 collected at 3 feet to 5 feet bgs. The release extent has been laterally delineated by soil sample CS01 excavation sidewall soil samples SW05 and SW07. The proposed deferral area and all delineation and excavation soil samples used to define the deferral area are depicted on Figures 3 and 4.

Contango does not believe deferment will result in imminent risk to human health, the environment, or groundwater. The impacted soil remaining in place is limited in lateral and vertical extent, and the entirety of the release remained on pad. Based on the presence of active production equipment within the release area and the complete lateral and vertical delineation of impacted soil remaining in place, Contango requests deferral of final remediation for Incident Number nAPP2407128665 until final reclamation of the well pad or major construction, whichever comes first.

### Job Narrative 890-6878-1

#### REVISION

The report being provided is a revision of the original report sent on 7/9/2024. The report (revision 1) is being revised due to Per client email, requesting chloride re runs..

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers are applied to indicate exceptions. Noncompliant quality control (QC) is further explained in narrative comments.

- Matrix QC may not be reported if insufficient sample or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

#### **Receipt**

The samples were received on 7/2/2024 3:56 PM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 5.8°C.

#### **Receipt Exceptions**

**QUESTIONS**

<b>Nature and Volume of Release (continued)</b>	
Is this a gas only submission (i.e. only significant Mcf values reported)	No, according to supplied volumes this does not appear to be a "gas only" report.
Was this a major release as defined by Subsection A of 19.15.29.7 NMAC	Yes
Reasons why this would be considered a submission for a notification of a major release	From paragraph A. "Major release" determine using: (1) an unauthorized release of a volume, excluding gases, of 25 barrels or more.

*With the implementation of the 19.15.27 NMAC (05/25/2021), venting and/or flaring of natural gas (i.e. gas only) are to be submitted on the C-129 form.*

<b>Initial Response</b>	
<i>The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury.</i>	
The source of the release has been stopped	True
The impacted area has been secured to protect human health and the environment	True
Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices	True
All free liquids and recoverable materials have been removed and managed appropriately	True
If all the actions described above have not been undertaken, explain why	<i>Not answered.</i>

*Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see Subparagraph (a) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.*

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
