Pima Environmental Services, LLC (Pima) has been contracted by Spur Energy to perform a spill assessment, remediation activities, and submit this closure report for a produced water and crude oil release that occurred at the Holiday 1H SWB (Holiday). The initial release was discovered on February 18<sup>th</sup>, 2025. This incident was assigned Incident ID NAPP2504948286, by the New Mexico Oil Conservation Division (NMOCD).

#### Site Characterization

Holiday is located approximately 11.51 miles southwest of Atoka, NM. This spill site is in Unit D, Section 1, Township 20S, Range 25E, Latitude 32.60883, Longitude -104.44568, Eddy County, NM. Figure 1 references a location map.

According to the New Mexico Bureau of Geology and Mineral Resources, the geological composition of the area consists of older piedmont alluvial deposits, dating from the Piedmont alluvial deposits (refer to Appendix B). The dominant soil type within the site is classified as Reagan-Upton association with 0 to 9 percent slopes, as identified in the USDA Natural Resources Conservation Service soil survey (Appendix B). Drainage characteristics for the area are described as well-drained. The geological assessment further concludes that there is a high likelihood of karst features occurring in proximity to the Holiday site (see Figure 3). The closest major watercourse is Brantley Lake, situated approximately 3.50 miles to the southeast (Appendix A).

According to data from the New Mexico Office of the State Engineer (OSE), the nearest groundwater to the Holiday site is located at a depth greater than 121 feet below ground surface (bgs), based on information from water well RA 10898, drilled on February 17, 2006, approximately 0.52 miles from the site. Additionally, the United States Geological Survey (USGS) identifies the closest groundwater monitoring well—USGS 323613104260901—located about 0.68 miles from the Holiday site, with a recorded water depth of 121.35 feet bgs, last measured on January 6, 2022. For detailed well locations and spatial reference, see Appendix A, which includes a comprehensive water well map showing both OSE and USGS well locations.

**Release Information**

**NAPP2504948286:** On February 18, 2025, a stuffing box packing failure resulted in the release of an oil and produced water mixture onto the engineered pad. The entire release was contained on pad. Approximately one barrel of crude oil and eight barrels of produced water were released. Spur Energy personnel promptly mobilized to implement containment and response measures. Cleanup efforts successfully limited the spread of the release and led to the recovery of one barrel of crude oil and four barrels of produced water. The impacted area is shown in Figure 5.

**Site Assessment and Soil Sampling Results**

On February 21, 2025, Pima Environmental Services mobilized personnel to the site to initiate delineation activities. Soil sampling was conducted from the release point to the easternmost extent of the impacted area. A total of twenty-one vertical (S1–S21) and four horizontal (SW1–SW4) delineation sample points were collected at depths ranging from the surface to four feet below ground surface (bgs). Delineation boundaries were established based on field screening results using a Photoionization Detector (PID) and titration methods. All samples were collected as grab samples and submitted for laboratory analysis to determine total chlorides (EPA Method 300.0), BTEX compounds (EPA Method 8021B), and motor, diesel, and gasoline range organics (MRO, DRO, GRO) using EPA Method 8015D. Samples were placed in laboratory-supplied glassware, properly labeled, stored on ice, and delivered to Cardinal Laboratories in Hobbs, New Mexico (Appendix C). All soil samples were collected within the boundaries of the engineered pad. A summary of the analytical results is presented in the data table, with complete laboratory reports provided in Appendix E.

### Remediation Activities

Between May 1 and May 31, Pima Environmental deployed a heavy equipment operator and a field technician to carry out remediation of the impacted area. Excavation depths were determined based on soil sample locations. Samples S1, S6, S4, S10, S14, S15 and S19 were excavated to a depth of 3 feet bgs. Areas corresponding to samples S2, S3, S5, S7, S8, S9, S18 and S21 were excavated to a depth of 4 feet (bgs). The section containing samples S12 and S17 were excavated to six feet bgs, while the area associated with samples S11, S16 and S20 was excavated to two feet bgs. Finally, the area overlapping soil sample S13 was excavated to one foot bgs. In total, approximately 10,808 square feet were excavated, resulting in the removal of an estimated

1,400 cubic yards of contaminated soil. The soil was securely transported to Lea Land, a New Mexico Oil Conservation Division (NMOCD)-approved disposal facility.

On May 21, 2025, Spur Energy proactively submitted a 48-hour sampling notification as part of the preliminary preparations leading up to the final confirmation sampling event. This precautionary step was taken with the expectation that all sampling results would fall below the closure criteria established by the New Mexico Oil Conservation Division (NMOCD). Should the results confirm compliance, the plan is to move forward with the closure process. For additional details, the 48-hour notification can be referenced in Appendix C.

On May 26, 2025, a Pima Environmental field technician performed a confirmation sampling event at the Holiday site to assess the effectiveness of the remedial excavation. A total of sixty-five composite bottom samples (designated CS1–CS65) and nineteen composite sidewall samples (designated CSW1–CSW19) were collected. Each sidewall sample represented a five-point composite collected vertically along the full extent of the excavation sidewalls, from the base to the surface, ensuring comprehensive spatial representation. The sampling methodology adhered to standard industry protocols for post-excavation verification and contaminant delineation.

Soil samples CS1 through CS7 were collected from an area excavated to a depth of four feet below ground surface (bgs), covering approximately 960 square feet. Corresponding confirmation sidewall composite samples CSW1 and CSW2 were collected from the perimeter of this excavation, totaling approximately 282 square feet.

Samples CS8 through CS12 were collected from a three-foot- deep excavation covering approximately 512 square feet, with sidewall composite sample CSW3 and CSW4 collected from the surrounding perimeter, covering approximately 141 square feet.

Samples CS13 through CS15 were collected from a four-foot-deep excavation covering approximately 357 square feet. A corresponding sidewall sample, CSW5, was collected from the excavation perimeter, measuring approximately 40 square feet.

Samples CS16 through CS22 were obtained from a two-foot excavation zone totaling approximately 1,126 square feet. Sidewall samples CSW18 and CSW19 were collected from the perimeter, covering a combined area of approximately 146 square feet.

Samples CS23 and CS24 were collected from a one-foot-deep excavation covering approximately 249 square feet, with sidewall sample CSW17 collected from the perimeter, covering approximately 37 square feet.

Samples CS25 through CS29 were collected from a six-foot excavation totaling approximately 1,008 square feet.

Samples CS30 through CS37 were collected from a three-foot excavation area covering approximately 1,792 square feet, with corresponding sidewall samples CSW6 and CSW7 collected from the perimeter, totaling approximately 288 square feet.

Samples CS38 through CS41 were collected from a three-foot-deep excavation measuring approximately 700 square feet. Sidewall sample CSW11 was collected from the perimeter, covering approximately 210 square feet.

Samples CS42 through CS48 were obtained from a three-foot-deep excavation covering approximately 1,431 square feet. Sidewall samples CSW12 and CSW14 were collected from the perimeter, totaling approximately 420 square feet.

Finally, samples CS49 through CS65 were collected from a four-foot excavation spanning approximately 2,672 square feet. Sidewall samples CSW9 and CSW10 were collected from the northern perimeter (approximately 560 square feet), while samples CSW15 and CSW16 were collected from the southern perimeter (approximately 264 square feet).

The results of this confirmation sampling event are summarized in the following data table.

Each soil sample was a 5-point composite derived from the excavated area, specifically representing an area not exceeding 200 square feet of the open excavation. A total of eighty-four (84) samples were collected for laboratory analysis for total chloride using EPA Method 300.0; benzene, toluene, ethylbenzene and total xylenes (BTEX) using EPA Method 8021B; and motor, diesel, and gasoline range organics (MRO, DRO, & GRO) by EPA Method 8015D. All samples were placed into laboratory supplied glassware, labeled, and maintained on ice until delivery to Cardinal Laboratories in Hobbs, New Mexico (Appendix C).

Upon confirmation that all soil samples met the closure standards set by the New Mexico Oil Conservation Division (NMOCD), clean backfill material was brought in and utilized to restore the excavated area, returning it to its original state.

## MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:20,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service

Web Soil Survey URL:

Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Eddy Area, New Mexico

Survey Area Data: Version 20, Sep 3, 2024

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Nov 12, 2022—Dec 2, 2022

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

S-04	The surrogate recovery for this sample is outside of established control limits due to a sample matrix effect.
QR-03	The RPD value for the sample duplicate or MS/MSD was outside of QC acceptance limits due to matrix interference. QC batch accepted based on LCS and/or LCSD recovery and/or RPD values.
QM-07	The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
BS-3	Blank spike recovery outside of lab established statistical limits, but still within method limits. Data is not adversely affected.
ND	Analyte NOT DETECTED at or above the reporting limit
RPD	Relative Percent Difference
**	Samples not received at proper temperature of 6°C or below.
***	Insufficient time to reach temperature.

The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

Per Subsection B of 19.15.29.11 NMAC unless the site characterization report includes completed efforts at remediation, the report must include a proposed remediation plan in accordance with 19.15.29.12 NMAC, which includes the anticipated timelines for beginning and completing the remediation.

On what estimated date will the remediation commence	05/01/2025
On what date will (or did) the final sampling or liner inspection occur	05/26/2025
On what date will (or was) the remediation complete(d)	05/31/2025
What is the estimated surface area (in square feet) that will be reclaimed	10807
What is the estimated volume (in cubic yards) that will be reclaimed	1400
What is the estimated surface area (in square feet) that will be remediated	10807
What is the estimated volume (in cubic yards) that will be remediated	1400

These estimated dates and measurements are recognized to be the best guess or calculation at the time of submission and may (be) change(d) over time as more remediation efforts are completed.

The OCD recognizes that proposed remediation measures may have to be minimally adjusted in accordance with the physical realities encountered during remediation. If the responsible party has any need to significantly deviate from the remediation plan proposed, then it should consult with the division to determine if another remediation plan submission is required.

**Remediation Closure Request**

*Only answer the questions in this group if seeking remediation closure for this release because all remediation steps have been completed.*

Requesting a remediation closure approval with this submission	Yes
Have the lateral and vertical extents of contamination been fully delineated	Yes
Was this release entirely contained within a lined containment area	No
All areas reasonably needed for production or subsequent drilling operations have been stabilized, returned to the sites existing grade, and have a soil cover that prevents ponding of water, minimizing dust and erosion	Yes
What was the total surface area (in square feet) remediated	10807
What was the total volume (cubic yards) remediated	1400
All areas not reasonably needed for production or subsequent drilling operations have been reclaimed to contain a minimum of four feet of non-waste contain earthen material with concentrations less than 600 mg/kg chlorides, 100 mg/kg TPH, 50 mg/kg BTEX, and 10 mg/kg Benzene	Yes
What was the total surface area (in square feet) reclaimed	10807
What was the total volume (in cubic yards) reclaimed	1400
Summarize any additional remediation activities not included by answers (above)	The impacted area was excavated, and all affected material was transported to an NMOCD-approved landfill for disposal. Confirmation soil sampling was conducted to verify that all contaminated material had been removed. Upon receiving analytical results confirming successful remediation, clean backfill was brought in to restore the area to its original grade.

*The responsible party must attach information demonstrating they have complied with all applicable closure requirements and any conditions or directives of the OCD. This demonstration should be in the form of a comprehensive report (in .pdf format) including a scaled site map, sampling diagrams, relevant field notes, photographs of any excavation prior to backfilling, laboratory data including chain of custody documents of final sampling, and a narrative of the remedial activities. Refer to 19.15.29.12 NMAC.*

In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations. The responsible party acknowledges they must substantially restore, reclaim, and re-vegetate the impacted surface area to the conditions that existed prior to the release or their final land use in accordance with 19.15.29.13 NMAC including notification to the OCD when reclamation and re-vegetation are complete.
