2024 ANNUAL GROUNDWATER MONITORING REPORT

1.0 INTRODUCTION

This Annual Groundwater Monitoring Report (Report) has been prepared on behalf of El Paso Natural Gas Company, LLC (EPNG) to present the results of the 2024 groundwater monitoring activities at the San Juan River Gas Plant (SJRP, the Site). The Report also documents quarterly light non-aqueous phase liquid (LNAPL) recovery activities and Soil Vapor Extraction (SVE) pilot testing.

The Site is currently regulated by the New Mexico Oil Conservation Division (NMOCD) and is located at 99 Road 6500, Kirtland, San Juan County, New Mexico. The site location is shown in Figure 1 and the site plan is shown in Figure 2. The Site activities were performed by Stantec Consulting Services, Inc. (Stantec), on behalf of EPNG.

2024 ANNUAL GROUNDWATER MONITORING REPORT

2.0 SITE BACKGROUND

2.1 SITE DESCRIPTION

The SJRP facility is located near Kirtland, New Mexico and was operated as a natural gas processing and distribution facility. The SJRP received natural gas from production wells located in the San Juan River Basin of New Mexico and southern Utah. EPNG owned the SJRP until June 1992, when it was sold to Western Gas Resources, Inc., a subsidiary of Anadarko Petroleum Corporation. In May 2014, Western Gas Resources sold the facility to CCI San Juan, LLC, a subsidiary of Castleton Commodities International, LLC (CCI). CCI San Juan, LLC ceased operations at the SJRP in the Spring of 2020. EPNG retained responsibility for environmental impacts known to exist prior to its 1992 sale of the facility. The NMOCD manages EPNG's historical releases at the SJRP under Incident Number NAUTOFRM000157, formerly Order AP-69.

The SJRP is a 630-acre facility that contains gas processing facilities, a sulfur recovery plant, water and hydrocarbon tanks, a pigging station, flare, and several 16- to 24-inch diameter natural gas pipelines that cross the facility. The above-ground gas processing facilities are being demolished and removed. The facility formerly contained two raw water ponds and three wastewater evaporation ponds, which are now closed. Closure of the evaporation ponds, flare pits, and other potential contaminant source areas were completed from 1992 through 1995.

During 2002 and 2003, a Praxair nitrogen recovery plant was built on the northern portion of the SJRP, approximately 300 yards south of monitoring wells MW-8 and MW-9. The nitrogen plant includes a 3.7 million gallon, double synthetically lined evaporation pond (Praxair Pond) with a leak detection system that is used to evaporate cooling tower blowdown, compressor foundation storm water, and air compressor condensate. The storm water and condensate flow through an oil/water separator prior to discharging to the Praxair Pond. Due to issues with the integrity of the Praxair Pond leak detection system, Praxair ceased Pond operations from August 15, 2010, until July 13, 2012, as the Pond was partially rebuilt, and the leak detection system was repaired.

The areas surrounding the impacted portions of the Site are used for non-residential activities. Properties adjacent to the SJRP include undeveloped land to the north that is underlain by coal mining operations, a public golf course to the south, commercial and residential properties to the east, and surface and underground coal mining operations to the west and northwest. The extreme northwestern portion of SJRP, beginning westward from the Praxair Pond, has been mined for coal. The coal mining operations, which support the nearby San Juan Generating Station power plant (Station), ceased in 2022, coinciding with a planned shutdown of coal combustion activities at the Station in 2023.

2.2 SITE HISTORY

In 1985, the NMOCD issued a directive for oil and gas producers to cease discharging production fluids to unlined surface impoundments (pits) located in the groundwater recharge areas of the San Juan River Basin and major river drainages to the San Juan, Animas, and La Plata Rivers. Once discharge had ceased, producers were required to

2024 ANNUAL GROUNDWATER MONITORING REPORT

investigate and remediate soil and groundwater contamination caused by these pits. In response, multiple investigations and removal actions have been completed at the SJRP:

- Multiple investigations were conducted at the SJRP between 1985 and 1995. During these investigations, 24 monitoring wells were installed at various locations at the Site.
- In 1992, the north and south flare pits were closed, and 18,200 cubic yards and 3,520 cubic yards of contaminated soil were removed from these flare pits, respectively. A former landfarm located southwest of the main production area is composed of the soil excavated from the north and south flare pits during their closure. On June 29, 1993, NMOCD granted closure of the flare pits with the condition that designated monitoring wells located downgradient of each former pit be monitored on an annual basis. The former wastewater evaporation ponds were closed during 1995 and 1996. The pit and pond closure activities included capping with compacted, low permeability soils. On June 17, 1997, NMOCD granted closure of the soil landfarm.
- From 1995 through 1997, EPNG abandoned 17 monitoring wells (E-1B, E-1A, E-3, E-9, E-10, E-11, MW-1, MW-2, MW-3, P-2, P-5, P-6, P-7, P-8, P-9, P-10, and P-12), 2 wells (W-2 and MW-4) were upgraded, and 5 new wells (MW-5, MW-6, MW-7, MW-8, and MW-9) were installed. In addition, a soil gas investigation was performed. The results of the soil gas investigation indicated the presence of shallow hydrocarbon contamination near monitoring wells MW-8 and MW-9, which are in the northwestern portion of the SJRP facility.
- During January 2001, EPNG submitted to NMOCD a groundwater remediation work plan which addressed the elevated benzene concentrations in groundwater in monitoring wells MW-8 and MW-9. This work plan included provisions to install an air sparging system with two air sparging wells and one injection point located within 10 feet of each monitoring well. NMOCD gave approval to begin remediation activities in June 2001. The air sparging injection wells (SW-8 and SW-9) were installed during October 2001 and developed during November 2001. Following installation, a pre-pilot air sparging test was conducted at both wells. The results of the test indicated effective communication between SW-9 and MW-9, but poor communication between SW-8 and MW-8. Due to poor communication between SW-8 and MW-8, magnesium peroxide oxygen-releasing compound (ORC®) socks were used in MW-8 in lieu of air sparging. The air sparging system was installed near MW-9 and began operation on November 14, 2001.
- From February 2002 through December 2002, site activities consisted of continued operation and maintenance (O&M) of the air sparging system, and site-wide annual groundwater monitoring.
- In 2003, site activities included periodic O&M of the air sparging system, replacement of the ORC socks in MW-8, quarterly groundwater sampling of MW-8 and MW-9, and site-wide annual groundwater monitoring.
- Due to benzene, toluene, ethylbenzene, and xylenes (BTEX) concentrations in groundwater being below the New Mexico Water Quality Control Commission

2024 ANNUAL GROUNDWATER MONITORING REPORT

(NMWQCC) standards, the air sparging system was shut down in February 2004 to assess static groundwater conditions at the Site.

- During 2004 through 2006, site activities included replacement of the ORC socks in MW-8, quarterly groundwater sampling of MW-8 and MW-9, and site-wide annual groundwater monitoring.
- EPNG submitted a Stage 1 Abatement Plan to NMOCD in November 2005 to investigate hydrocarbon impacts in groundwater adjacent to the Praxair water evaporation pond at the SJRP. NMOCD approved the Abatement Plan on January 23, 2006, and the investigation was completed in February 2006. A total of 15 soil borings (GPH-1 through GPH-15) were advanced, and 39 soil samples were collected and retained for laboratory analysis. Due to the shallow refusal depths encountered in weathered bedrock using direct-push drilling methods, a revised work plan was submitted to NMOCD in September 2006. The revised work plan recommended further investigation be performed using hollow-stem auger drilling methods. EPNG did not receive a formal response from NMOCD to the revised work plan.
- Monitoring well MW-7, located immediately adjacent to the Praxair facility, was plugged and abandoned in May 2007 at the request of Praxair to accommodate new process construction at that location.
- During the May 2008 groundwater sampling event, it was observed that monitoring well MW-5 had been destroyed due to subsurface coal mining activities near the western edge of the SJRP. The destruction of the well was determined to have occurred between February and May 2008.
- From May 2008 through the end of 2011, the environmental program at the SJRP consisted of remediation via ORC® socks in MW-8 and site-wide annual groundwater monitoring, as documented in annual reports.
- From 2013 through 2016, annual groundwater samples were collected from the existing site monitoring wells and documented in annual groundwater monitoring reports. In August 2016, a Site Characterization Work Plan was completed and submitted to NMOCD proposing additional assessment activities in the vicinity of the Praxair Pond and an area in the vicinity of a discharge pipe outfall to the north.
- In 2017, 19 soil borings (SB-01 through SB-19) were advanced as part of a site characterization investigation. Six monitoring wells (MW-11 through MW-16) were also advanced and completed. A total of 84 soil samples were collected and retained for laboratory analysis during advancement of the soil borings and monitoring wells. The results of the site characterization activities were documented in a November 2020 Site Characterization Report. Groundwater from the existing and newly installed monitoring wells, including existing Praxair monitoring wells, was sampled in July and November 2017. The 2017 groundwater sample data was presented in the 2017 Annual Groundwater Monitoring report.
- In 2018, groundwater samples were collected from the existing monitoring wells and Praxair monitoring wells, which was documented in the 2018 Annual Groundwater Monitoring Report. A Phase 2 Site Characterization Work Plan proposing additional investigation was completed in January 2019.

2024 ANNUAL GROUNDWATER MONITORING REPORT

- In March 2019, Phase 2 site characterization investigation activities were performed at the Site and included the advancement and installation of seven monitoring wells (MW-17 through MW-23) around the Historic Burn Area and near the Praxair Pond. Groundwater samples were collected in March and April 2019, and again in October 2019. The results of the site characterization activities completed from 2017 through 2019 were presented in the 2020 Site Characterization Report.
- In August 2020, a stepped mobile dual-phase extraction (MDPE) event was conducted on monitoring well MW-20 where LNAPL is present, to assess its recoverability and potential source. The results of this activity were summarized in the 2020 Annual Groundwater Monitoring Report.
- In July 2021, three monitoring wells, MW-24 through MW-26, were installed east of monitoring well MW-20 to evaluate potential hydrocarbon source areas in this direction. The monitoring well installation activities and results were summarized in the 2021 Annual Groundwater Monitoring Report.
- In April and July 2022, additional subsurface investigation activities were performed, including installation of monitoring wells MW-27 and MW-28. The results of these activities were presented in the 2022 Annual Groundwater Monitoring Report.
- In July and October 2023, two addition monitoring wells, MW-29 and MW-30 were installed and sampled. Semi-annual groundwater sampling activities were also initiated following completion of these monitoring wells. The results of the MW-29 and MW-30 were presented in the 2023 Annual Groundwater Monitoring Report.

Separate from EPNG's investigation of the Site, Praxair advanced and installed five monitoring wells (PMW-1 through PMW-5) in July and August 1993, around the Praxair Pond, which was constructed in the location of the former EPNG raw water pond. Monitoring wells PMW-1 through PMW-4 were installed to depths ranging from 80 to 90 feet below ground surface (bgs). As perched groundwater was encountered during advancement of PMW-3, a shallow monitoring well, PMW-5, was installed in the same borehole. However, hydrocarbons were noted during advancement of the monitoring wells on the east side of the pond, and monitoring wells PMW-3 and PMW-5 were subsequently plugged and abandoned (MWH, 2006).

As a result of Praxair's reconstruction of their Pond, monitoring wells PMW-1 and PMW-4 were plugged and abandoned, and replacement monitoring wells PMW-1a and PMW-4a were installed in February 2010. PMW-1a was completed to a depth of 101 feet bgs, while the boring for PMW-4a was advanced to a depth of 210 feet bgs and the well completed at a depth of 150 feet bgs. Information regarding the Praxair monitoring wells was provided in the 2020 Annual Groundwater Monitoring Report (Stantec, 2021).

2024 ANNUAL GROUNDWATER MONITORING REPORT

2.3 GEOLOGY AND HYDROGEOLOGY

Philip Environmental (Philip Environmental, 1998) summarized the geology of the Site during their investigations. Based on drilling logs from 1995 and prior activities, the soils consist of fine sand to fine sandy clay, with some gravel and cobbles. The soil samples from borings located in the valley or alluvial fans (such as P-10, P-7, P-9, MW-5, MW-8, and MW-9) consist of fine sand to clay.

The uppermost and most prevalent lithology at the Site is comprised of alluvial sediments, which consist of fluvial deposits and, to a lesser extent, terrace deposits of gravel and cobbles. Beneath the alluvium are the consolidated sedimentary units of the Kirtland Formation, which includes both shale and sandstone members. The portion of the Site to the north of the gas plant is underlain by a shale member of the Kirtland Formation. The SJRP and Flare Hill, located on the west edge of the SJRP, are underlain by a sandstone member of the Kirtland Formation. During remediation of the South Flare Pit in September 1992, a distinct clay layer was encountered at a depth of approximately 15 feet below the original bottom of the pit.

During the 2006 investigation (MWH, 2006) using direct-push drilling methods, refusal was met in hard shale, siltstone, a silty sand mix, and sandstone at interval depths of 8 to 15 ft bgs. Lithology generally changed from a clay soil near the ground surface to alternating weathered shale and sandstone. This interpretation was considered consistent with previous assessments of the geology, and it was reported that most of the soil borings met refusal in what was likely the Kirtland Formation.

During the 2017-2019 site characterization investigation (Jacobs, 2020), alluvium consisting of silt and clay was encountered and varied in thickness from 10 feet to as much as 41 feet. Alluvium was underlain by sandstone in 2 of 7 boreholes and by shale in 5 of 7 boreholes. The geological assessment performed during the 2017-2019 site investigation was reported to be consistent with the results summarized in the 1998 Philip Environmental and 2006 MWH investigations.

2024 ANNUAL GROUNDWATER MONITORING REPORT

3.0 FIELD ACTIVITIES

Activities completed in 2024 included groundwater sampling in May and November, LNAPL monitoring and recovery in March, May, August, and November, and SVE feasibility testing in August. Email notifications were provided to the NMOCD prior to the start of field work. Copies of the notifications are included in Appendix A.

The following sections summarize the 2024 site activities.

3.1 DEPTH TO WATER MEASUREMENTS

Site-wide well gauging activities were conducted on May 13 and November 5, 2024. Well gauging was completed using an oil-water interface probe, and the depth to water and depth to LNAPL, as applicable, were measured at each monitoring well that was accessed.

3.2 LNAPL RECOVERY

LNAPL recovery activities were performed in March, May, August, and November 2024. The LNAPL recovery data is summarized on Table 1. Recovered LNAPL and water was transported to the Envirotech Inc. (Envirotech) land farm, located in Bloomfield, New Mexico, for disposal. Associated wastewater disposal documentation is included in Appendix B.

3.3 GROUNDWATER SAMPLING

Following the collection of well gauging data on May 13 and November 5, 2024, groundwater samples were collected from monitoring wells where no measurable LNAPL was present and a water column sufficient for the collection of groundwater samples was present. Groundwater samples were collected using HydraSleeve™ no-purge samplers and as noted below. During the May event, monitoring wells MW-24 through MW-28, and MW-30 were sampled. During the November event, these monitoring wells were sampled again along with monitoring wells W-2, MW-4, MW-6, MW-8, MW-9, MW-11, through MW-20, and MW-29.

Collected groundwater samples were placed into laboratory-supplied sample containers, sealed, labeled, packed on ice, and shipped under chain-of-custody protocols to Eurofins Environment Testing Southeast, in Pensacola, Florida (Eurofins). One laboratory-originated trip blank, two field duplicate samples (one during the May event), and two matrix spike/matrix spike duplicate (MSMSD) samples (one during the May event) were also collected during the events and submitted for analysis. Groundwater samples were analyzed for BTEX using Method 8260D, dissolved metals using Method 6010D, dissolved mercury using Method 7470A, alkalinity using Method SM 2320B; chloride, sulfate, and nitrate using Method 300.0, and total dissolved solids (TDS) using Method SM 2540C. Samples collected for dissolved metals analysis were field filtered using 0.45-micron filters, prior to sample preservation and shipment to the laboratory.

2024 ANNUAL GROUNDWATER MONITORING REPORT

Excess groundwater and other wastewater generated during the groundwater sampling events was containerized and transported to Envirotech for disposal. Associated wastewater disposal documentation is included in Appendix B.

3.4 SOIL VAPOR EXTRACTION FEASIBILITY TESTING

SVE feasibility testing activities were conducted at the Site on August 20 and August 21, 2024, by CalClean Inc, of Orange California (CalClean). CalClean possesses a No Permit Required (NPR) letter from the New Mexico Environment Department (NMED) for operation of their equipment for its intended purposes.

The NMOCD was notified of the start date for the feasibility testing activities on August 14, 2024 (Appendix A). SVE feasibility testing was completed at MW-29, as elevated hydrocarbon concentrations have been observed in this location that may warrant active remediation. MW-29 was constructed with sufficient well screen above the water table to facilitate the SVE testing.

The intent of SVE is to reduce concentrations of VOCs within the saturated-vadose zone through extraction and volatilization. The SVE feasibility testing conducted was completed using a truck mounted High-Vacuum Dual Phase Extraction (HVDPE) system with a liquid ring pump with equipment configured to extract vapors. A stinger was installed to control the upwelling of groundwater during testing, if necessary, however, no water was recovered during the testing activities. The vacuum pump was connected to the extraction point with hoses to induce vacuum on the well. Extracted vapors were destroyed by an oxidizer, part of the truck mounted system.

Step SVE testing was conducted to evaluate vacuum, flowrate, and hydrocarbon concentration response. The process involved inducing various vacuum pressures at the test well by incrementally decreasing dilution air into the vacuum pump. During testing, flow rate, vacuum, hydrocarbon concentration, and pressure/vacuum influence at nearby monitoring points was recorded to evaluate performance.

CalClean approximates hydrocarbon using a Horiba vapor analyzer. To further quantify vapor concentrations, estimate hydrocarbon mass removal during the testing, and confirm destruction efficiency of the oxidizer, vapor samples were collected from the influent and effluent streams on August 21, 2024. Each sample was analyzed for BTEX constituents by EPA Method TO-15 and TPH by Modified EPA Method TO-3. Analytical laboratory reports for the vapor samples are included in CalClean's report (Appendix C).

No wastes were generated during the feasibility testing that required offsite disposal.

2024 ANNUAL GROUNDWATER MONITORING REPORT

4.0 RESULTS AND DISCUSSION

4.1 GROUNDWATER ELEVATION AND GRADIENT

Groundwater elevation data collected on May 13 and November 5, 2024, is summarized in Table 2. Groundwater flow onto the Site is generally westward, with flow in the southwest direction south of the Praxair Plant, and west and northwest north of the Praxair Plant. As noted in previous reports, a groundwater divide is located beneath the SJRP. Groundwater elevation contour maps for May 13 and November 5, 2024, are included as Figures 3 and 4, respectively.

4.2 GROUNDWATER ANALYTICAL RESULTS

Tables 3 and 4 summarize the May and November 2024 and historical groundwater BTEX, dissolved metals, and inorganics analytical results. Figures 5 through 10 depict the BTEX, dissolved metals, and inorganics concentrations that exceeded NMWQCC standards during the sampling events. The groundwater laboratory analytical reports are included in Appendix D. The following is a summary of findings based on field observations and the May and November 2024 groundwater analytical results:

- LNAPL was observed in monitoring well MW-21 in March and November 2024, and in MW-20 and MW-29 in May 2025.
- Groundwater samples collected from monitoring wells MW-9, MW-13, MW-15, MW-16, MW-17, MW-20, MW-28, and MW-29 exceeded the NMWQCC standard (0.01 milligrams per liter [mg/L]) for benzene. Benzene concentrations were either below the standard or not detected in the remaining monitoring wells sampled in 2024.
- The November groundwater samples collected from MW-17 and MW-20 exceeded the NMWQCC standard (0.75 mg/L) for toluene. Concentrations of toluene were either below the standard or not detected in the remaining monitoring wells sampled in 2024.
- The November groundwater sample collected from MW-28 exceeded the NMWQCC standard (0.75 mg/L) for ethylbenzene. Concentrations of ethylbenzene were either below the standard or not detected in the remaining monitoring wells sampled in 2024.
- Groundwater samples collected from MW-16, MW-17, MW-20, MW-28, and MW-29 exceeded the NMWQCC standard (0.62 mg/L) for total xylenes. Total xylene concentrations were either below the standard or not detected in the remaining monitoring wells sampled in 2024.
- Dissolved metal concentrations that equaled or exceeded an NMWQCC standard in 2024 include those for: aluminum (MW-6 and MW-9 [NMWQCC standard of 5 mg/L]); arsenic (W-2, MW-11, and MW-16 [NMWQCC standard of 0.01 mg/L]); boron (MW-6, MW-9, MW-15, MW-18, MW-24, MW-26, MW-27, and MW-28 [NMWQCC standard of 0.75 mg/L]); cobalt (MW-6, MW-9, MW-18, and MW-27 [NMWQCC standard of 0.05 mg/L]); iron (MW-8, MW-9, MW-12, MW-13, MW-14, MW-15, MW-18, and MW-29 [NMWQCC standard of 1 mg/L]); manganese (each of the sampled wells except W-2, MW-16, and MW-28 [NMWQCC standard of 0.2 mg/L]); and zinc (MW-6, MW-9, MW-15, MW-18, MW-24, MW-26, MW-27, and MW-28 [NMWQCC standard of 0.05 mg/L]).

2024 ANNUAL GROUNDWATER MONITORING REPORT

mg/L]); nickel (MW-6, MW-9, and MW-18 [NMWQCC standard of 0.2 mg/L]); and selenium (W-2, MW-6, , MW-20, MW-28, and MW-30 [NMWQCC standard of 0.05 mg/L]).

- Inorganic constituent concentrations that exceeded an NMWQCC standard in 2024 include those for: chloride (each of the sampled wells except W-2, MW-8, MW-16, MW-19, and MW-20 [NMWQCC standard of 250 mg/L]); nitrate (W2, MW-6, and MW-30 [NMWQCC standard of 10 mg/L]); sulfate (each of the sampled wells [NMWQCC standard of 600 mg/L]); and TDS (each of the sampled wells except MW-29 [NMWQCC standard of 1,000 mg/L]).

A field duplicate was collected from monitoring well MW-28 during the May 2024 event and field duplicates were collected from monitoring wells MW-16 and MW-18 during the November 2024 sampling event. No significant differences exist between the primary and the duplicate samples. Detectable concentrations of BTEX constituents were not reported in the trip blanks submitted for analysis during the sampling events.

Groundwater analytical data were subjected to a validation process for the review of data quality and analytical methods used. The data review focused on the potential impact of laboratory performance and matrix effects on the validity of the analytical results. During the review, sample results that did not meet quality control (QC) acceptance criteria were qualified with flags to indicate a potential problem with the data, as noted on the groundwater analytical data summary tables. The 2024 groundwater sampling data is considered usable as qualified in this report. The Stantec data validation report, and associated level IV data packages from Eurofins, are available upon request.

4.3 SVE FEASIBILITY TESTING RESULTS

Based on the observed flow rates, hydrocarbon concentration, and induced vacuum data collected during the feasibility testing, the feasibility of SVE at the MW-29 location was inconclusive. Low flow rates were observed under various induced vacuums, although hydrocarbon concentrations were noted to have generally increased during completion of the testing. Furthermore, testing did not identify a radius of vacuum influence.

The total amount of hydrocarbons removed during the testing is estimated in CalClean's report. Based on the Horiba analyzer data, approximately 3.42 pounds (0.55 gallons) of hydrocarbons were removed during the testing event.

2024 ANNUAL GROUNDWATER MONITORING REPORT

5.0 PLANNED FUTURE ACTIVITIES

Semi-annual groundwater monitoring is planned for the second and fourth calendar quarters of 2025. During the second quarter sampling event, groundwater samples will be collected from the MW-24 through MW-30, where LNAPL is not observed. During the fourth quarter sampling event, groundwater samples will be collected from each site monitoring well not containing LNAPL, with sufficient water column to sample. If encountered while on-site, LNAPL will be hand bailed and recovered and the fluids will be transported off-site for proper disposal.

Monitoring for LNAPL will continue on a quarterly basis in 2025. If encountered, LNAPL will be hand bailed and recovered. Additional hydrocarbon remedial feasibility testing of MW-29 is planned for 2025, the plan for which to be outlined in a separate submittal to NMOCD.

The activities completed in 2025, and the results will be summarized in the 2025 Annual Report, to be submitted by April 1, 2026.

Notes:

* = Includes calculated recovered hydrocarbon vapors.

gal = gallons.

LNAPL = Light non-aqueous phase liquid.

MDPE = Mobile Dual-Phase Extraction.

N/A = Not attempted.

ND = Not detected.

SVE = Soil Vapor Extraction

LNAPL Data for previous years are documented in previously-submitted reports.

Notes:

ft amsl = feet above mean sea level.

ft btoc = feet below top of casing.

LNAPL = Light non-aqueous phase liquid.

NA = Historical data not available.

ND = not detected.

NM = not measured.

TOC = top of casing.

Groundwater elevation is calculated by: [top of casing elevation – depth to water + (LNAPL thickness × 0.75)]

Notes:

Bolded text indicates a detected concentration.

Highlighted cells and bolded text indicates the concentration exceeded the NMWQCC standard.

< = Not detected above the method detection limit.

F1 = MS and/or MSD recovery exceeds control limits.

J = The analyte was positively identified and the quantitation is an estimation.

LNAPL = Light Non-Aqueous Phase Liquids

mg/L = milligram(s) per liter

NMWQCC = New Mexico Water Quality Control Commission

UJ = The analyte was analyzed for, but not detected. Due to a quality control deficiency identified during data validation the value reported may not accurately reflect the sample quantitation limit

Notes:

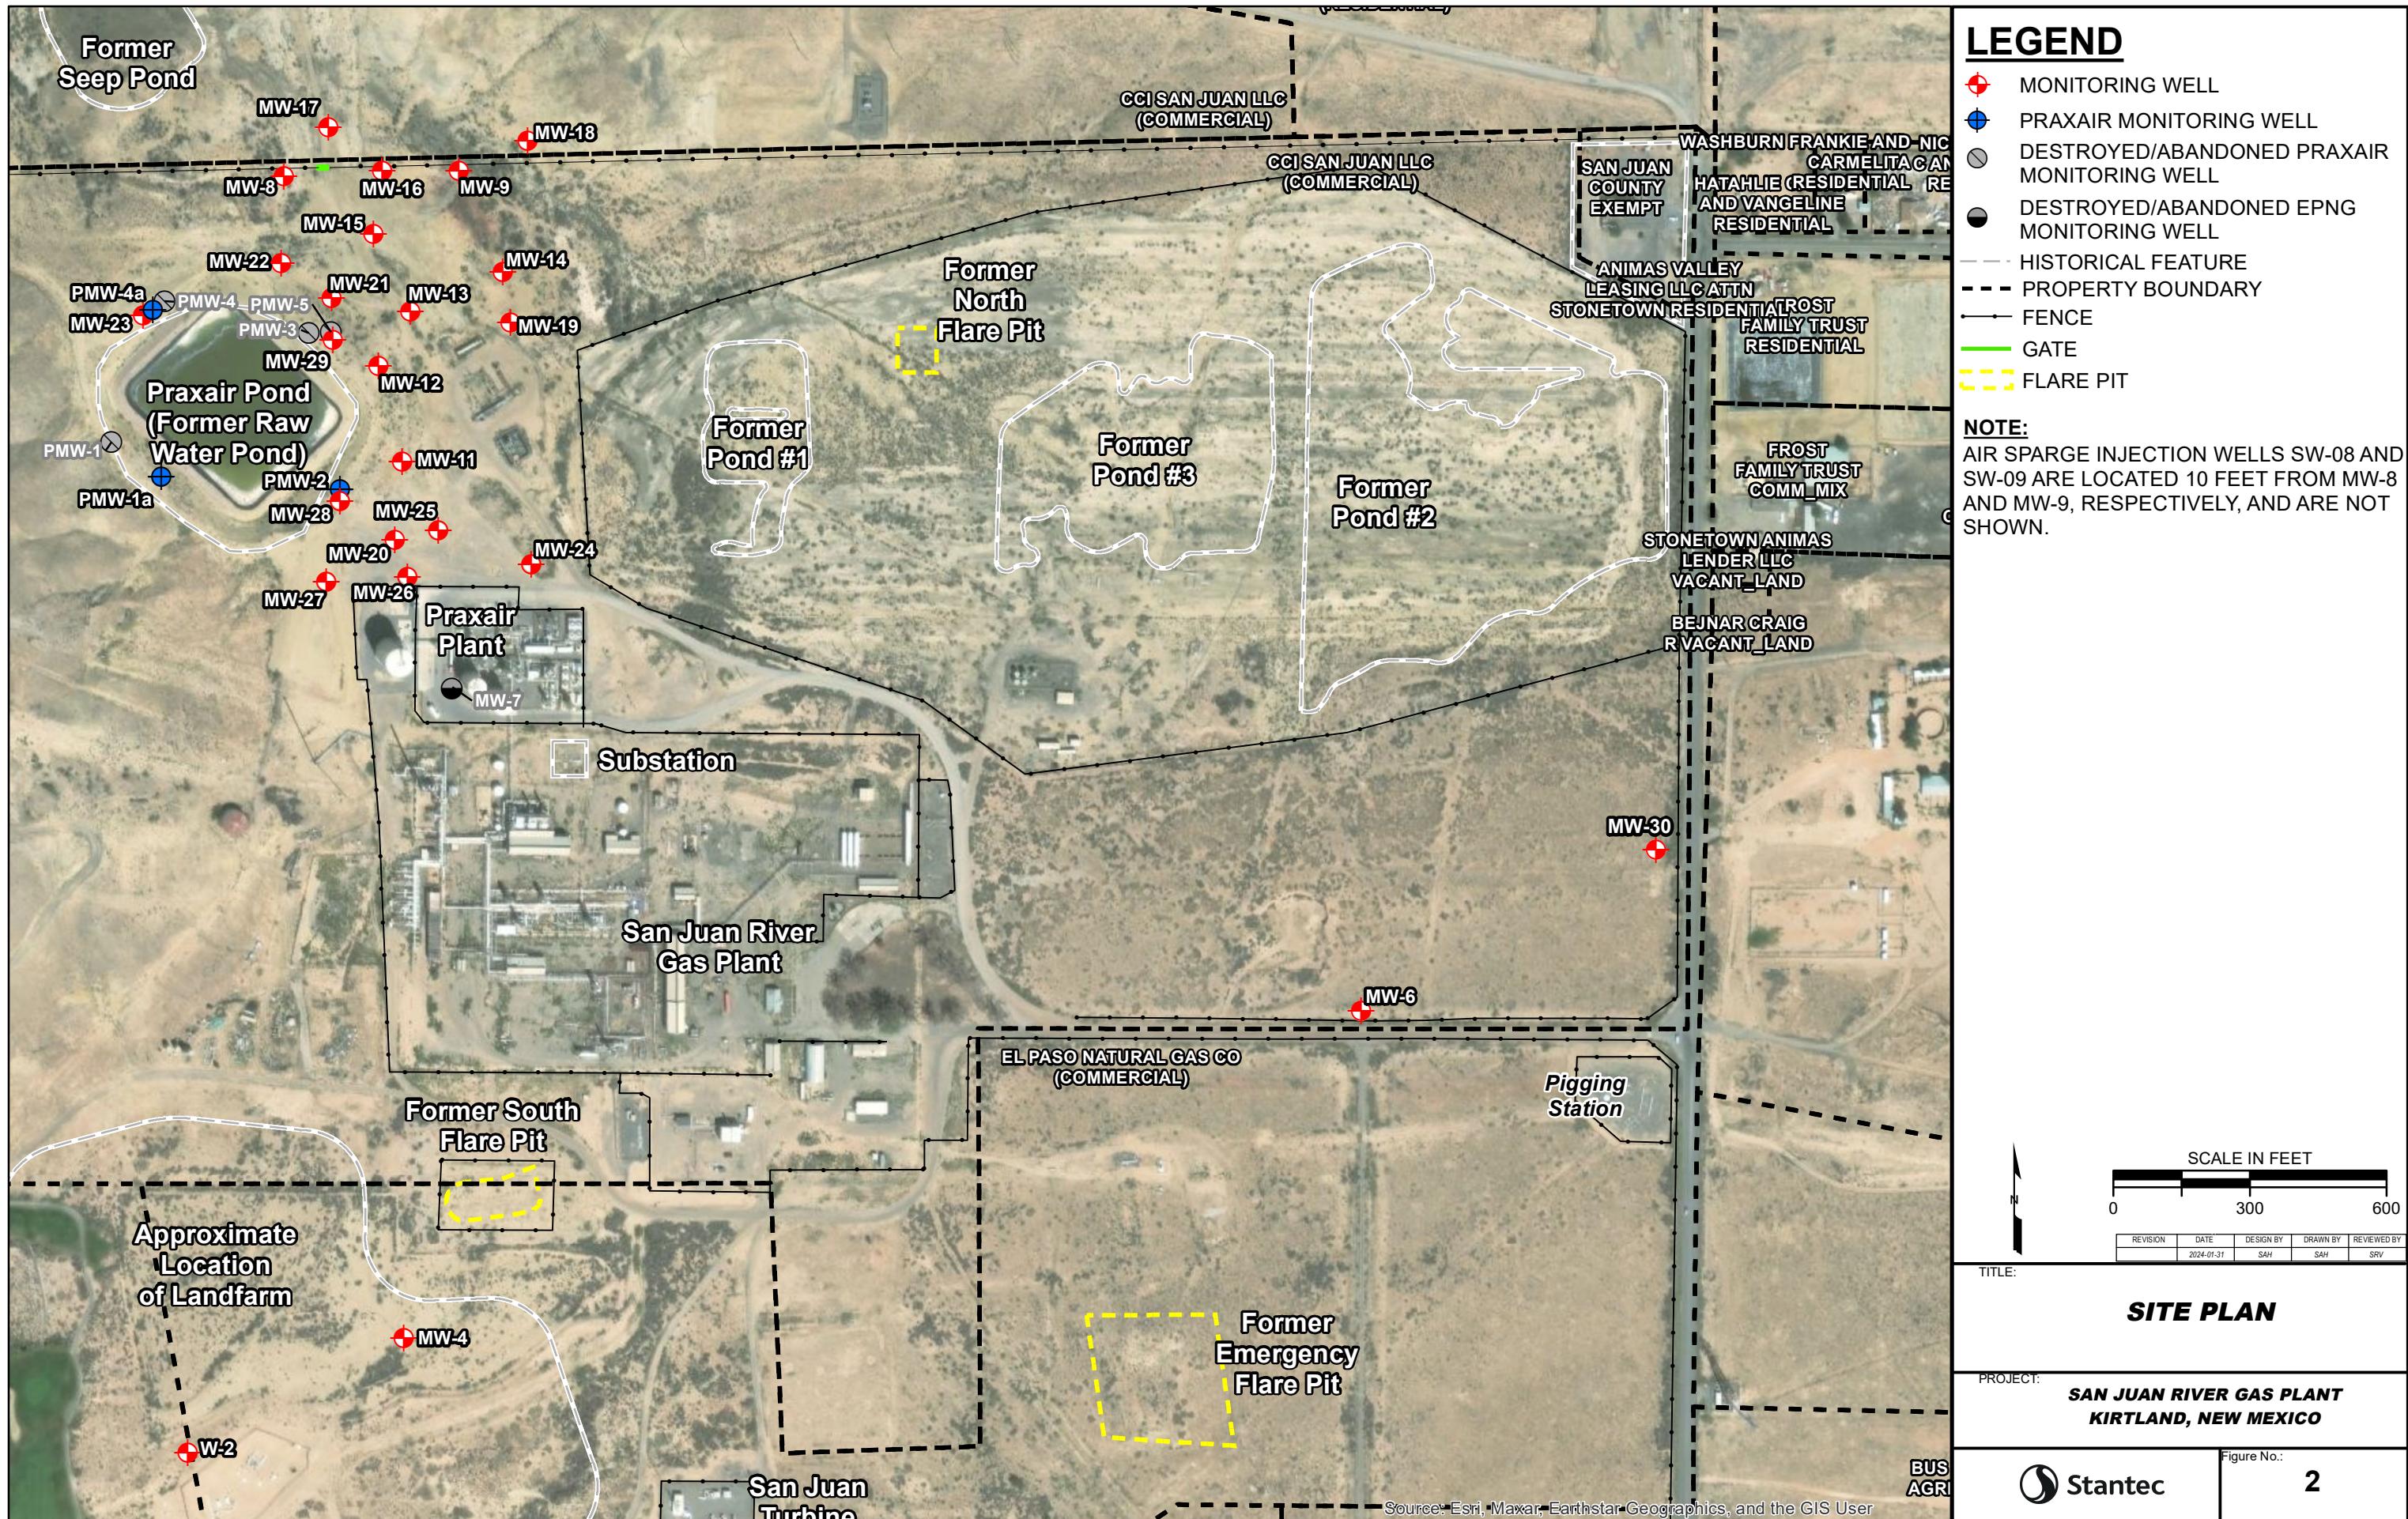

Bolded text indicates a detected concentration.
 Highlighted cells and bolded text indicates the concentration exceeded the NMWQCC standard.
 -- = not analyzed
 < or ND = not detected above the method detection limit
 + = Continuing Calibration Verification (CCV) is outside acceptance limits, high biased.
 B = Compound was found in the blank and sample.
 F1 = MS and/or MSD recovery exceeds control limits.
 F2 = MS/MSD RPD exceeds control limits.
 H = Sample was prepped or analyzed beyond the specified holding time.
 J+ = The result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
 J- = The analyte was positively identified and the quantitation is an estimation with a potential high bias.
 LNAPL = Light Non-Aqueous Phase Liquids
 mg/L = milligram(s) per liter
 NE = Not established
 NMWQCC = New Mexico Water Quality Control Commission
 UJ = The analyte was analyzed for, but not detected. Due to a quality control deficiency identified during data validation the value reported may not accurately reflect the sample quantitation limit.
 Historical data for wells abandoned prior to 2017 has been removed from this Table.

APPENDICES

APPENDIX A

NMOCD Notification of Site Activities

From: OCDOOnline@state.nm.us
To: Varsa, Steve
Subject: The Oil Conservation Division (OCD) has accepted the application, Application ID: 324476
Date: Tuesday, March 19, 2024 2:02:06 AM

You don't often get email from ocdonline@state.nm.us. [Learn why this is important](#)

To whom it may concern (c/o Stephen Varsa for El Paso Natural Gas Company, L.L.C),

The OCD has received the submitted *Notification for (Final) Sampling of a Release* (C-141N), for incident ID (n#) nAUTOfRM000157.

The sampling event is expected to take place:

When: 03/25/2024 @ 13:00

Where: G-01-29N-15W 0 FNL 0 FEL (36.758323,-108.367358)

Additional Information: Sean Clary - 913-980-0281. Quarterly LNAPL recovery activities - no sampling for laboratory analysis planned.

Additional Instructions: 99 Rd 6500, Kirtland, NM

An OCD representative may be available onsite at the date and time reported. In the absence or presence of an OCD representative, sampling pursuant to 19.15.29.12.D NMAC is required. Sampling must be performed following an approved sampling plan or pursuant to 19.15.29.12.D.(1).(c) NMAC. Should there be a change in the scheduled date and time of the sampling event, then another notification should be resubmitted through OCD permitting as soon as possible.

- **Failure to notify the OCD of sampling events including any changes in date/time per the requirements of 19.15.29.12.D.(1).(a) NMAC, may result in the remediation closure samples not being accepted.**

If you have any questions regarding this application, or don't know why you have received this email, please contact us.

Subject: El Paso Natural Gas Company - San Juan River Gas Plant, Kirkland (Incident Number NAUTORFRM000157) - notice of upcoming groundwater sampling and product recovery activities
Date: Thursday, May 9, 2024 5:06:07 PM

This correspondence is to provide notice to the NMOCD of planned groundwater sampling and product recovery activities at the above-referenced El Paso Natural Gas Company (EPNG) site. The site activities are to occur on May 14, 2024.

Please feel free to contact Joe Wiley, Project Manager at EPNG, or me, if you need further information.

Thank you,
Steve

Subject: San Juan River Plant (nAUTORRM000157) - Notice of Upcoming Activities
Date: Wednesday, August 14, 2024 8:19:15 PM

On behalf of El Paso Natural Gas Company (EPNG), Stantec is planning to complete LNAPL recovery testing activities using mobile dual-phase extraction (MDPE) methods at the subject site on August 19 and 20, 2024. The LNAPL recovery testing activities will be conducted for 24 hours from monitoring well MW-29. Stantec's contractor, CalClean, utilizes an onboard thermal oxidizer to reduce emissions which will be evaluated through Summa sampling. Otherwise, the MDPE testing methods to be utilized will be similar to those conducted at the Site on August 20, 2020, as summarized in the 2020 Annual Report for the subject site.

Please feel free to contact Joe Wiley, Project Manager at EPNG, or me, if you need further information.

Thank you,
Steve

Subject: El Paso Natural Gas Company - San Juan River Gas Plant, Kirkland (Incident Number NAUTORFRM000157) - notice of upcoming groundwater sampling and product recovery activities
Date: Monday, October 28, 2024 11:22:25 AM

This correspondence is to provide notice to the NMOCD of planned groundwater sampling and product recovery activities at the above-referenced El Paso Natural Gas Company (EPNG) site. The site activities are to occur on November 4 and 7, 2024.

Please feel free to contact Joe Wiley, Project Manager at EPNG, or me, if you need further information.

Thank you,
Steve

CalClean SVE Pilot Testing Report

CALCLEAN INC.**"A Partner in Protecting America's Waters"**

February 14, 2025

Stantec
11311 Aurora Avenue
Des Moines, IA 50322

ATTN: MR. STEVE VARSA

SITE: SAN JUAN RIVER PLANT
NEW MEXICO

RE: SOIL VAPOR EXTRACTION FEASIBILITY TESTING REPORT

Dear Mr. Varsa:

CalClean Inc. is submitting this SVE Feasibility Testing Extraction Report for the above referenced site. This report includes activities performed from August 20-21, 2024.

From August 20-21, 2024, CalClean performed a 1-day SVE Feasibility Testing extraction (SVE) event on one well (MW-29) using a low-noise, truck-mounted 450-CFM high-vacuum liquid ring blower. The test comprised an approximately 24-hour test on well MW-29. This technology allows hydrocarbons to be simultaneously removed from the vadose zone, capillary fringe, and saturated soil zone.

SVE Feasibility Testing was conducted using a high vacuum system that uses a 25-hp liquid ring blower for extraction and was configured to test one well at a time and not to draw down groundwater. This system can extract at a maximum vacuum of 29 inches of Hg and has a maximum capacity of 450 cfm. During the 1-day event, the SVE Feasibility Testing system was individually connected to well MW-29 - as directed by the consultant. Dilution air was added and gradually reduced to increase vacuum at the extraction well in steps. Approximately four steps were tested while the vapor flow rates were measured.

Total Inlet vapor samples were collected in Summa Canisters during the event. The laboratory results are listed in Table 1 and included in Attachment 1.

The total equivalent amount of hydrocarbons recovered through vapor extraction during the 1-day SVE Feasibility Testing event was 3.42 pounds. The cumulative tabulation of recovered hydrocarbons (based on the field organic vapor analyzer data) is provided in Table 2.

No groundwater was recovered during the event.

Soil Vapor Extraction Feasibility Testing Report
San Juan River Plant, New Mexico
February 14, 2025

During the event, several monitoring points were measured for vacuum influence. The observation well readings (in "H₂O) are included in the field data sheets in Attachment 2.

The following attachments are included to document the SVE Feasibility Testing event at the site:

- Table 1 Results of Laboratory Analysis of Influent Vapor Samples
Table 2 Hydrocarbon Mass Removal (using Horiba Data)
Figure 1 Total Inlet HC Concentrations versus Time (1 Day, Using Horiba Data)
Figure 2 Cumulative HC Recovered over 1 Day (using Horiba Data)
Attachment 1 Laboratory Reports
Attachment 2 SVE Feasibility Testing Extraction Field Data Sheets

It has been a pleasure working with you on this project. If you have any questions regarding this data report, please contact us at (714) 936-2706.

Sincerely,

CALCLEAN INC.

Noel Shenoi
Principal Engineer

Dear Ms. Isabel Enfinger

The following report includes the data for the above referenced project for sample(s) received on 8/22/2024 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by TO-15 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Brian Whittaker at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

A handwritten signature in black ink that reads "Brian Whittaker".

LABORATORY NARRATIVE
EPA Method TO-15
Eurofins Test America
Workorder# 2408602A

Two 6 Liter Summa Canister samples were received on August 22, 2024. The laboratory performed analysis via EPA Method TO-15 using GC/MS in the full scan mode.

Receiving Notes

The Chain of Custody (COC) information for samples INF-08212024 (SIRP) and EFF-08212024 (SIRP) did not match the entries on the sample tags with regard to sample identification. Therefore the information on the COC was used to process and report the samples.

Sample EFF-08212024 (SIRP) was received with significant vacuum remaining in the canister. The residual canister vacuum resulted in elevated reporting limits.

Analytical Notes

Dilution was performed on sample INF-08212024 (SIRP) due to the presence of high level target species.

Definition of Data Qualifying Flags

Ten qualifiers may have been used on the data analysis sheets and indicates as follows:

B - Compound present in laboratory blank greater than reporting limit (background subtraction not performed).

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the reporting limit, LOD, or MDL value. See data page for project specific U-flag definition.

UJ - Non-detected compound associated with low bias in the CCV

N - The identification is based on presumptive evidence.

M - Reported value may be biased due to apparent matrix interferences.

CN - See Case Narrative.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

Project Name: SIRP
Project #:
Workorder #: 2408602B

Dear Ms. Isabel Enfinger

The following report includes the data for the above referenced project for sample(s) received on 8/22/2024 at Eurofins Air Toxics LLC.

The data and associated QC analyzed by Modified TO-3 are compliant with the project requirements or laboratory criteria with the exception of the deviations noted in the attached case narrative.

Thank you for choosing Eurofins Air Toxics LLC. for your air analysis needs. Eurofins Air Toxics Inc. is committed to providing accurate data of the highest quality. Please feel free to contact the Project Manager: Brian Whittaker at 916-985-1000 if you have any questions regarding the data in this report.

Regards,

A handwritten signature in black ink that reads "Brian Whittaker".

LABORATORY NARRATIVE
Modified TO-3
Eurofins Test America
Workorder# 2408602B

Two 6 Liter Summa Canister samples were received on August 22, 2024. The laboratory performed analysis for volatile organic compounds in air via modified EPA Method TO-3 using gas chromatography with flame ionization detection. The TPH results are calculated using the response of Octane. A molecular weight of 114 is used to convert the TPH ppmv result to mg/m³. The method involves concentrating up to 200 mL of sample. The concentrated aliquot is then dry purged to remove water vapor prior to entering the chromatographic system.

Method modifications taken to run these samples are summarized in the table below. Specific project requirements may over-ride the ATL modifications.

| Requirement | TO-3 | ATL Modifications |
|--------------------------------------|---|---|
| Daily Calibration Standard Frequency | Prior to sample analysis and every 4 - 6 hrs | Prior to sample analysis and after the analytical batch </= 20 samples. |
| Initial Calibration Calculation | 4-point calibration using a linear regression model | 5-point calibration using average Response Factor |
| Initial Calibration Frequency | Weekly | When daily calibration standard recovery is outside 75 - 125 %, or upon significant changes to procedure or instrumentation |
| Moisture Control | Nafion system | Sorbent system |
| Minimum Detection Limit (MDL) | Calculated using the equation $DL = A + 3.3S$, where A is intercept of calibration line and S is the standard deviation of at least 3 reps of low level standard | 40 CFR Pt. 136 App. B |
| Preparation of Standards | Levels achieved through dilution of gas mixture | Levels achieved through loading various volumes of the gas mixture |

Receiving Notes

The Chain of Custody (COC) information for samples INF-08212024 (SIRP) and EFF-08212024 (SIRP) did not match the entries on the sample tags with regard to sample identification. Therefore the information on the COC was used to process and report the samples.

Sample EFF-08212024 (SIRP) was received with significant vacuum remaining in the canister. The residual canister vacuum resulted in elevated reporting limits.

Analytical Notes

There were no analytical discrepancies.

Definition of Data Qualifying Flags

Seven qualifiers may have been used on the data analysis sheets and indicate as follows:

B - Compound present in laboratory blank greater than reporting limit.

J - Estimated value.

E - Exceeds instrument calibration range.

S - Saturated peak.

Q - Exceeds quality control limits.

U - Compound analyzed for but not detected above the detection limit.

M - Reported value may be biased due to apparent matrix interferences.

File extensions may have been used on the data analysis sheets and indicates as follows:

a-File was requantified

b-File was quantified by a second column and detector

r1-File was requantified for the purpose of reissue

Qualifiers

HPLC/IC

| Qualifier | Qualifier Description |
|-----------|---|
| 4 | MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable. |
| E | Result exceeded calibration range. |
| F1 | MS and/or MSD recovery exceeds control limits. |
| J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |

Metals

| Qualifier | Qualifier Description |
|-----------|--|
| ^+ | Continuing Calibration Verification (CCV) is outside acceptance limits, high biased. |
| F1 | MS and/or MSD recovery exceeds control limits. |
| J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |

General Chemistry

| Qualifier | Qualifier Description |
|-----------|------------------------------------|
| E | Result exceeded calibration range. |

Glossary

| Abbreviation | These commonly used abbreviations may or may not be present in this report. |
|----------------|---|
| ⊕ | Listed under the "D" column to designate that the result is reported on a dry weight basis |
| %R | Percent Recovery |
| CFL | Contains Free Liquid |
| CFU | Colony Forming Unit |
| CNF | Contains No Free Liquid |
| DER | Duplicate Error Ratio (normalized absolute difference) |
| Dil Fac | Dilution Factor |
| DL | Detection Limit (DoD/DOE) |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC | Decision Level Concentration (Radiochemistry) |
| EDL | Estimated Detection Limit (Dioxin) |
| LOD | Limit of Detection (DoD/DOE) |
| LOQ | Limit of Quantitation (DoD/DOE) |
| MCL | EPA recommended "Maximum Contaminant Level" |
| MDA | Minimum Detectable Activity (Radiochemistry) |
| MDC | Minimum Detectable Concentration (Radiochemistry) |
| MDL | Method Detection Limit |
| ML | Minimum Level (Dioxin) |
| MPN | Most Probable Number |
| MQL | Method Quantitation Limit |
| NC | Not Calculated |
| ND | Not Detected at the reporting limit (or MDL or EDL if shown) |
| NEG | Negative / Absent |
| POS | Positive / Present |
| PQL | Practical Quantitation Limit |
| PRES | Presumptive |
| QC | Quality Control |
| RER | Relative Error Ratio (Radiochemistry) |
| RL | Reporting Limit or Requested Limit (Radiochemistry) |
| RPD | Relative Percent Difference, a measure of the relative difference between two points |
| TEF | Toxicity Equivalent Factor (Dioxin) |
| TEQ | Toxicity Equivalent Quotient (Dioxin) |
| TNTC | Too Numerous To Count |

Job ID: 885-15001-1**Eurofins Albuquerque**

Job Narrative 885-15001-1

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 11/8/2024 7:40 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were -1.4°C, 0.1°C, 0.9°C and 1.1°C.

HPLC/IC

Method 300_OF_28D_PREC: The native samples, matrix spikes, and matrix spike duplicates (MS/MSD) associated with Analytical Batch 15635 were performed at the same dilution. Due to the additional level of analyte present in the spiked samples, the concentration of Sulfate and Chloride analytes in the MS/MSD were above the instrument calibration range. The data have been reported and qualified.

Method 300_OF_28D_NO3: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 885-15649 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 300_OF_28D_NO3: The following samples were diluted due to the nature of the sample matrix: W-2 (885-15001-2) and MW-16 (885-15001-10). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Metals

Method 6010B - Dissolved: The continuing calibration verification (CCV) associated with batch 885-15710 recovered above the upper control limit for Zinc. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 6010B - Dissolved: The continuing calibration verification (CCV) associated with batch 885-15710 recovered above the upper control limit for Barium, Chromium and Cobalt. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 6010B - Dissolved: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 885-15985 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 6010B - Dissolved: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 885-15951 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Method 6020A - Dissolved: The continuing calibration verification (CCV) associated with batch 885-17125 recovered above the upper control limit for Selenium. The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported.

Method 7470A - Dissolved: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for preparation batch 885-15704 and analytical batch 885-16843 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

Eurofins Albuquerque

Case Narrative

Client: Stantec Consulting Services, Inc.
Project: KM - San Juan River Plant

Job ID: 885-15001-1

Job ID: 885-15001-1 (Continued)**Eurofins Albuquerque**

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

General Chemistry

Method 2320B: Temperatures of samples and QC varied by up to 2.8 degrees C, while the method requires no more than 2 degrees C difference. Scanned bench sheet contains temperature data for reference.

MW-13 (885-15001-8), MW-16 (885-15001-10), MW-20 (885-15001-22), DUP-02 (885-15001-25), (LCS 885-16270/2) and (MB 885-16270/1)

Method 2540C_SingleDry: The analysis volume selected for the following samples produced a base result greater than 200mg before calculation of the final result: W-2 (885-15001-2), MW-27 (885-15001-4), MW-12 (885-15001-7), MW-18 (885-15001-18) and DUP-01 (885-15001-24). Reanalysis could not be performed due to holding time exceedance. Visual inspection by analyst shows no signs of trapped moisture, report as is. The reference method specifies that no more than 200mg of weight be recovered for a chosen sample analysis volume in order to produce the best data precision. As such, these data have been qualified.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Accreditation/Certification Summary

Client: Stantec Consulting Services, Inc.
Project/Site: KM - San Juan River Plant

Job ID: 885-15001-1

Laboratory: Eurofins Albuquerque

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

| Authority | Program | Identification Number | Expiration Date |
|---|-------------|-----------------------|---|
| New Mexico | State | NM9425, NM0901 | 02-26-25 |
| The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification. | | | |
| Analysis Method | Prep Method | Matrix | Analyte |
| 2540C | | Water | Total Dissolved Solids |
| 300.0 | | Water | Chloride |
| 300.0 | | Water | Nitrate |
| 300.0 | | Water | Nitrate Nitrite as N |
| 300.0 | | Water | Nitrite |
| 300.0 | | Water | Sulfate |
| 6010B | | Water | Aluminum |

Login Sample Receipt Checklist

Client: Stantec Consulting Services, Inc.

Job Number: 885-15001-1

Login Number: 15001**List Source: Eurofins Albuquerque****List Number: 1****Creator: Casarrubias, Tracy**

| Question | Answer | Comment |
|--|--------|--|
| The cooler's custody seal, if present, is intact. | True | |
| Sample custody seals, if present, are intact. | True | |
| The cooler or samples do not appear to have been compromised or tampered with. | True | |
| Samples were received on ice. | True | |
| Cooler Temperature is acceptable. | False | One cooler <0 degrees, samples not frozen. |
| Cooler Temperature is recorded. | True | |
| COC is present. | True | |
| COC is filled out in ink and legible. | True | |
| COC is filled out with all pertinent information. | True | |
| Is the Field Sampler's name present on COC? | True | |
| There are no discrepancies between the containers received and the COC. | False | Refer to Job Narrative for details. |
| Samples are received within Holding Time (excluding tests with immediate HTs) | True | |
| Sample containers have legible labels. | True | |
| Containers are not broken or leaking. | True | |
| Sample collection date/times are provided. | True | |
| Appropriate sample containers are used. | True | |
| Sample bottles are completely filled. | True | |
| Sample Preservation Verified. | True | |
| There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs | True | |
| Containers requiring zero headspace have no headspace or bubble is <6mm (1/4"). | True | |
| TCEQ Mtd 1005 soil sample was frozen/delivered for prep within 48H of sampling. | N/A | |

This receipt checklist is generated for all samples received in this Login. It may not be applicable to all Jobs associated with this Login.

ANALYTICAL REPORT

PREPARED FOR

Attn: Steve Varsa
Stantec Consulting Services, Inc.
11311 Aurora Avenue
Des Moines, Iowa 50322-7904

Generated 11/19/2024 3:34:55 PM

JOB DESCRIPTION

KM - San Juan River Plant

JOB NUMBER

885-15001-2

Eurofins Albuquerque
4901 Hawkins NE
Albuquerque NM 87109

See page two for job notes and contact information.

Eurofins Albuquerque

Job Notes

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing South Central, LLC Project Manager.

Authorization

Qualifiers

GC/MS VOA

| Qualifier | Qualifier Description |
|-----------|--|
| J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |

Glossary

| Abbreviation | These commonly used abbreviations may or may not be present in this report. |
|----------------|---|
| ☀ | Listed under the "D" column to designate that the result is reported on a dry weight basis |
| %R | Percent Recovery |
| CFL | Contains Free Liquid |
| CFU | Colony Forming Unit |
| CNF | Contains No Free Liquid |
| DER | Duplicate Error Ratio (normalized absolute difference) |
| Dil Fac | Dilution Factor |
| DL | Detection Limit (DoD/DOE) |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC | Decision Level Concentration (Radiochemistry) |
| EDL | Estimated Detection Limit (Dioxin) |
| LOD | Limit of Detection (DoD/DOE) |
| LOQ | Limit of Quantitation (DoD/DOE) |
| MCL | EPA recommended "Maximum Contaminant Level" |
| MDA | Minimum Detectable Activity (Radiochemistry) |
| MDC | Minimum Detectable Concentration (Radiochemistry) |
| MDL | Method Detection Limit |
| ML | Minimum Level (Dioxin) |
| MPN | Most Probable Number |
| MQL | Method Quantitation Limit |
| NC | Not Calculated |
| ND | Not Detected at the reporting limit (or MDL or EDL if shown) |
| NEG | Negative / Absent |
| POS | Positive / Present |
| PQL | Practical Quantitation Limit |
| PRES | Presumptive |
| QC | Quality Control |
| RER | Relative Error Ratio (Radiochemistry) |
| RL | Reporting Limit or Requested Limit (Radiochemistry) |
| RPD | Relative Percent Difference, a measure of the relative difference between two points |
| TEF | Toxicity Equivalent Factor (Dioxin) |
| TEQ | Toxicity Equivalent Quotient (Dioxin) |
| TNTC | Too Numerous To Count |

Case Narrative

Client: Stantec Consulting Services, Inc.
Project: KM - San Juan River Plant

Job ID: 885-15001-2

Job ID: 885-15001-2**Eurofins Albuquerque****Job Narrative
885-15001-2**

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 11/8/2024 7:40 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the 4 coolers at receipt time were -1.4°C, 0.1°C, 0.9°C and 1.1°C.

GC/MS VOA

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Accreditation/Certification Summary

Client: Stantec Consulting Services, Inc.
Project/Site: KM - San Juan River Plant

Job ID: 885-15001-2

Laboratory: Eurofins Albuquerque

Unless otherwise noted, all analytes for this laboratory were covered under each accreditation/certification below.

| Authority | Program | Identification Number | Expiration Date |
|------------|---------|-----------------------|-----------------|
| New Mexico | State | NM9425, NM0901 | 02-26-25 |

The following analytes are included in this report, but the laboratory is not certified by the governing authority. This list may include analytes for which the agency does not offer certification.

| Analysis Method | Prep Method | Matrix | Analyte |
|-----------------|-------------|--------|----------------|
| 8260B | | Water | Benzene |
| 8260B | | Water | Ethylbenzene |

ANALYTICAL REPORT

PREPARED FOR

Attn: Steve Varsa
Stantec Consulting Services, Inc.
11311 Aurora Avenue
Des Moines, Iowa 50322-7904

Generated 5/31/2024 11:08:04 AM

JOB DESCRIPTION

San Juan River Plant

JOB NUMBER

400-256227-1

Eurofins Pensacola
3355 McLemore Drive
Pensacola FL 32514

See page two for job notes and contact information.

Eurofins Pensacola

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southeast, LLC Project Manager.

Job Narrative 400-256227-1

Receipt

The samples were received on 5/18/2024 8:32 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 0.0° C.

GC/MS VOA

Method 8260D: The following samples were diluted to bring the concentration of target analytes within the calibration range: DUP-01 (400-256227-2) and MW-28 (400-256227-7). Elevated reporting limits (RLs) are provided.

Method 8260D: The matrix spike (MS) recoveries for analytical batch 400-672311 were outside control limits. Sample matrix interference is suspected because the associated laboratory control sample (LCS) recovery was within acceptance limits.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

HPLC/IC

Method 300.0: Due to the high concentration of Chloride, the matrix spike / matrix spike duplicate (MS/MSD) for analytical batch 400-672146 could not be evaluated for accuracy and precision. The associated laboratory control sample (LCS) met acceptance criteria.

Method 300.0: The following samples were diluted to bring the concentration of target analytes within the calibration range: DUP-01 (400-256227-2), MW-27 (400-256227-6), MW-28 (400-256227-7) and MW-30 (400-256227-8). Elevated reporting limits (RLs) are provided.

Method 300.0: Reanalysis of the following sample was performed outside of the analytical holding time due to the ability of a lower dilution: MW-30 (400-256227-8).

Method 300.0: Due to the high concentration of Sulfate, the matrix spike / matrix spike duplicate (MS/MSD) for analytical batch 400-672294 could not be evaluated for accuracy and precision. The associated laboratory control sample (LCS) met acceptance criteria.

Method 300.0: The following samples were received out of holding time: DUP-01 (400-256227-2), MW-27 (400-256227-6), MW-28 (400-256227-7) and MW-30 (400-256227-8).

Method 300.0: The continuing calibration blank for analytical batch 400-672000 contained Nitrate as N above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the continuing calibration blank; therefore, re-extraction and/or re-analysis of samples was not performed.

Method 300.0: The continuing calibration blank for analytical batch 400-672148 contained Nitrate as N above the method detection limit. This target analyte concentration was less than the reporting limit (RL) in the continuing calibration blank; therefore, re-extraction and/or re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry

Method SM 2320B: Due to the alkaline nature of the sample, the samples were titrated using a stronger titrant: DUP-01 (400-256227-2) and MW-28 (400-256227-7)

Method SM 2540C: The sample duplicate (DUP) precision for analytical batch 400-672292 was outside control limits. Sample non-homogeneity is suspected.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

VOA Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Eurofins Pensacola

Definitions/Glossary

Client: Stantec Consulting Services, Inc.
Project/Site: San Juan River Plant

Job ID: 400-256227-1

Qualifiers

GC/MS VOA

| Qualifier | Qualifier Description |
|-----------|--|
| F1 | MS and/or MSD recovery exceeds control limits. |
| U | Indicates the analyte was analyzed for but not detected. |

HPLC/IC

| Qualifier | Qualifier Description |
|-----------|---|
| H | Sample was prepped or analyzed beyond the specified holding time. This does not meet regulatory requirements. |
| H3 | Sample was received and analyzed past holding time. This does not meet regulatory requirements. |
| U | Indicates the analyte was analyzed for but not detected. |

Metals

| Qualifier | Qualifier Description |
|-----------|--|
| J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |
| U | Indicates the analyte was analyzed for but not detected. |

General Chemistry

| Qualifier | Qualifier Description |
|-----------|--|
| F3 | Duplicate RPD exceeds the control limit |
| U | Indicates the analyte was analyzed for but not detected. |

Glossary

| Abbreviation | These commonly used abbreviations may or may not be present in this report. |
|----------------|---|
| ¤ | Listed under the "D" column to designate that the result is reported on a dry weight basis |
| %R | Percent Recovery |
| CFL | Contains Free Liquid |
| CFU | Colony Forming Unit |
| CNF | Contains No Free Liquid |
| DER | Duplicate Error Ratio (normalized absolute difference) |
| Dil Fac | Dilution Factor |
| DL | Detection Limit (DoD/DOE) |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC | Decision Level Concentration (Radiochemistry) |
| EDL | Estimated Detection Limit (Dioxin) |
| LOD | Limit of Detection (DoD/DOE) |
| LOQ | Limit of Quantitation (DoD/DOE) |
| MCL | EPA recommended "Maximum Contaminant Level" |
| MDA | Minimum Detectable Activity (Radiochemistry) |
| MDC | Minimum Detectable Concentration (Radiochemistry) |
| MDL | Method Detection Limit |
| ML | Minimum Level (Dioxin) |
| MPN | Most Probable Number |
| MQL | Method Quantitation Limit |
| NC | Not Calculated |
| ND | Not Detected at the reporting limit (or MDL or EDL if shown) |
| NEG | Negative / Absent |
| POS | Positive / Present |
| PQL | Practical Quantitation Limit |
| PRES | Presumptive |
| QC | Quality Control |
| RER | Relative Error Ratio (Radiochemistry) |
| RL | Reporting Limit or Requested Limit (Radiochemistry) |
| RPD | Relative Percent Difference, a measure of the relative difference between two points |
| TEF | Toxicity Equivalent Factor (Dioxin) |
| TEQ | Toxicity Equivalent Quotient (Dioxin) |
| TNTC | Too Numerous To Count |

Job Notes

This report may not be reproduced except in full, and with written approval from the laboratory. The results relate only to the samples tested. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

The test results in this report relate only to the samples as received by the laboratory and will meet all requirements of the methodology, with any exceptions noted. This report shall not be reproduced except in full, without the express written approval of the laboratory. All questions should be directed to the Eurofins Environment Testing Southeast, LLC Project Manager.

Project: San Juan River Plant

Job ID: 400-256306-1

Job ID: 400-256306-1**Eurofins Pensacola****Job Narrative
400-256306-1****Receipt**

The samples were received on 5/21/2024 9:39 AM. Unless otherwise noted below, the samples arrived in good condition, and where required, properly preserved and on ice. The temperature of the cooler at receipt was 0.0° C.

HPLC/IC

Method 300.0: The following samples were diluted due to the abundance of non-target analytes: MW-24 (400-256306-1) and MW-25 (400-256306-2). Elevated reporting limits (RLs) are provided.

Method 300.0: The matrix spike / matrix spike duplicate (MS/MSD) recoveries for analytical batch 400-672296 were outside control limits for one or more analytes. See QC Sample Results for detail. Sample matrix interference and/or non-homogeneity are suspected because the associated laboratory control sample (LCS) recovery is within acceptance limits.

Method 300.0: Reanalysis of the following sample was performed outside of the analytical holding time due to dilution required : MW-24 (400-256306-1).

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry

Methods 160.1, SM 2540C: The sample duplicate (DUP) precision for analytical batch 400-672292 was outside control limits. Sample non-homogeneity is suspected.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Definitions/Glossary

Client: Stantec Consulting Services, Inc.
Project/Site: San Juan River Plant

Job ID: 400-256306-1

Qualifiers

HPLC/IC

| Qualifier | Qualifier Description |
|-----------|---|
| E | Result exceeded calibration range. |
| H | Sample was prepped or analyzed beyond the specified holding time. This does not meet regulatory requirements. |
| U | Indicates the analyte was analyzed for but not detected. |

Metals

| Qualifier | Qualifier Description |
|-----------|--|
| J | Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value. |
| U | Indicates the analyte was analyzed for but not detected. |

General Chemistry

| Qualifier | Qualifier Description |
|-----------|--|
| U | Indicates the analyte was analyzed for but not detected. |

Glossary

Abbreviation These commonly used abbreviations may or may not be present in this report.

| | |
|----------------|---|
| □ | Listed under the "D" column to designate that the result is reported on a dry weight basis |
| %R | Percent Recovery |
| CFL | Contains Free Liquid |
| CFU | Colony Forming Unit |
| CNF | Contains No Free Liquid |
| DER | Duplicate Error Ratio (normalized absolute difference) |
| Dil Fac | Dilution Factor |
| DL | Detection Limit (DoD/DOE) |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC | Decision Level Concentration (Radiochemistry) |
| EDL | Estimated Detection Limit (Dioxin) |
| LOD | Limit of Detection (DoD/DOE) |
| LOQ | Limit of Quantitation (DoD/DOE) |
| MCL | EPA recommended "Maximum Contaminant Level" |
| MDA | Minimum Detectable Activity (Radiochemistry) |
| MDC | Minimum Detectable Concentration (Radiochemistry) |
| MDL | Method Detection Limit |
| ML | Minimum Level (Dioxin) |
| MPN | Most Probable Number |
| MQL | Method Quantitation Limit |
| NC | Not Calculated |
| ND | Not Detected at the reporting limit (or MDL or EDL if shown) |
| NEG | Negative / Absent |
| POS | Positive / Present |
| PQL | Practical Quantitation Limit |
| PRES | Presumptive |
| QC | Quality Control |
| RER | Relative Error Ratio (Radiochemistry) |
| RL | Reporting Limit or Requested Limit (Radiochemistry) |
| RPD | Relative Percent Difference, a measure of the relative difference between two points |
| TEF | Toxicity Equivalent Factor (Dioxin) |
| TEQ | Toxicity Equivalent Quotient (Dioxin) |
| TNTC | Too Numerous To Count |

Login Number: 256306**List Source: Eurofins Pensacola****List Number: 1****Creator: Pardonner, Brett****Question****Answer****Comment**

Radioactivity wasn't checked or is </= background as measured by a survey meter.

N/A

The cooler's custody seal, if present, is intact.

N/A

Sample custody seals, if present, are intact.

N/A

The cooler or samples do not appear to have been compromised or tampered with.

True

Samples were received on ice.

True

Cooler Temperature is acceptable.

True

Cooler Temperature is recorded.

True 0.0°C IR8

COC is present.

True

COC is filled out in ink and legible.

True

COC is filled out with all pertinent information.

True

Is the Field Sampler's name present on COC?

True

There are no discrepancies between the containers received and the COC.

True

Samples are received within Holding Time (excluding tests with immediate HTs)

True

Sample containers have legible labels.

True

Containers are not broken or leaking.

True

Sample collection date/times are provided.

True

Appropriate sample containers are used.

True

Sample bottles are completely filled.

True

Sample Preservation Verified.

True

There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs

True

Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").

N/A

Multiphasic samples are not present.

True

Samples do not require splitting or compositing.

True

Residual Chlorine Checked.

N/A

Case Narrative

Client: Stantec Consulting Services, Inc.
Project: San Juan River Plant

Job ID: 400-256306-2

Job ID: 400-256306-2**Eurofins Pensacola****Job Narrative
400-256306-2**

Analytical test results meet all requirements of the associated regulatory program listed on the Accreditation/Certification Summary Page unless otherwise noted under the individual analysis. Data qualifiers and/or narrative comments are included to explain any exceptions, if applicable.

- Matrix QC may not be reported if insufficient sample is provided or site-specific QC samples were not submitted. In these situations, to demonstrate precision and accuracy at a batch level, a LCS/LCSD may be performed, unless otherwise specified in the method.
- Surrogate and/or isotope dilution analyte recoveries (if applicable) which are outside of the QC window are confirmed unless attributed to a dilution or otherwise noted in the narrative.

Regulated compliance samples (e.g. SDWA, NPDES) must comply with the associated agency requirements/permits.

Receipt

The samples were received on 5/21/2024 9:39 AM. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperature of the cooler at receipt time was 0.0°C.

HPLC/IC

Method 300_ORGFM_28D: Sample reported with E flags present per client request.

MW-24 (400-256306-1), MW-25 (400-256306-2) and MW-26 (400-256306-3)

No additional analytical or quality issues were noted, other than those described above or in the Definitions/ Glossary page.

Definitions/Glossary

Client: Stantec Consulting Services, Inc.
Project/Site: San Juan River Plant

Job ID: 400-256306-2

Qualifiers

HPLC/IC

| Qualifier | Qualifier Description |
|-----------|--|
| E | Result exceeded calibration range. |
| U | Indicates the analyte was analyzed for but not detected. |

Glossary

Abbreviation These commonly used abbreviations may or may not be present in this report.

| | |
|----------------|---|
| % | Listed under the "D" column to designate that the result is reported on a dry weight basis |
| %R | Percent Recovery |
| CFL | Contains Free Liquid |
| CFU | Colony Forming Unit |
| CNF | Contains No Free Liquid |
| DER | Duplicate Error Ratio (normalized absolute difference) |
| Dil Fac | Dilution Factor |
| DL | Detection Limit (DoD/DOE) |
| DL, RA, RE, IN | Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample |
| DLC | Decision Level Concentration (Radiochemistry) |
| EDL | Estimated Detection Limit (Dioxin) |
| LOD | Limit of Detection (DoD/DOE) |
| LOQ | Limit of Quantitation (DoD/DOE) |
| MCL | EPA recommended "Maximum Contaminant Level" |
| MDA | Minimum Detectable Activity (Radiochemistry) |
| MDC | Minimum Detectable Concentration (Radiochemistry) |
| MDL | Method Detection Limit |
| ML | Minimum Level (Dioxin) |
| MPN | Most Probable Number |
| MQL | Method Quantitation Limit |
| NC | Not Calculated |
| ND | Not Detected at the reporting limit (or MDL or EDL if shown) |
| NEG | Negative / Absent |
| POS | Positive / Present |
| PQL | Practical Quantitation Limit |
| PRES | Presumptive |
| QC | Quality Control |
| RER | Relative Error Ratio (Radiochemistry) |
| RL | Reporting Limit or Requested Limit (Radiochemistry) |
| RPD | Relative Percent Difference, a measure of the relative difference between two points |
| TEF | Toxicity Equivalent Factor (Dioxin) |
| TEQ | Toxicity Equivalent Quotient (Dioxin) |
| TNTC | Too Numerous To Count |

Radioactivity wasn't checked or is </= background as measured by a survey meter.

N/A

The cooler's custody seal, if present, is intact.

N/A

Sample custody seals, if present, are intact.

N/A

The cooler or samples do not appear to have been compromised or tampered with.

True

Samples were received on ice.

True

Cooler Temperature is acceptable.

True

Cooler Temperature is recorded.

True 0.0°C IR8

COC is present.

True

COC is filled out in ink and legible.

True

COC is filled out with all pertinent information.

True

Is the Field Sampler's name present on COC?

True

There are no discrepancies between the containers received and the COC.

True

Samples are received within Holding Time (excluding tests with immediate HTs)

True

Sample containers have legible labels.

True

Containers are not broken or leaking.

True

Sample collection date/times are provided.

True

Appropriate sample containers are used.

True

Sample bottles are completely filled.

True

Sample Preservation Verified.

True

There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs

True

Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").

N/A

Multiphasic samples are not present.

True

Samples do not require splitting or compositing.

True

Residual Chlorine Checked.

N/A

Action 498695

CONDITIONS

| | |
|---|--------------------------|
| Operator: El Paso Natural Gas Company, L.L.C 1001 Louisiana Street Houston, TX 77002 | OGRID: |
| | 7046 |
| | Action Number: 498695 |

Action Type:
[UF-GWA] Ground Water Abatement (GROUND WATER ABATEMENT)**CONDITIONS**

| Created By | Condition | Condition Date |
|--------------|---|----------------|
| shanna.smith | Pursuant to 19.15.30 NMAC, update Stage 2 Abatement Plan dated January 2019. Plan will be submitted as a report by October 24, 2025, that meets all the requirements of 19.15.30.13 NMAC. Provide a copy of the Stage 2 Abatement Report by October 17, 2025, so OCD can update our Online records. | 9/30/2025 |
| shanna.smith | Transition from submitting semi-annual monitoring and sampling reports to submitting quarterly monitoring and sampling reports. | 9/30/2025 |
| shanna.smith | All wells, where LNAPL is not observed, will be sampled Quarterly. Operators may request to reduce monitor wells sampled pending future results. | 9/30/2025 |
| shanna.smith | Continue to manually bail and recover LNAPL. | 9/30/2025 |
| shanna.smith | Submit the 2025 Annual Report by April 1, 2025. | 9/30/2025 |
