**Re: Reclamation Report  
Lost Tank 25 Tankless CPF  
Incident Number nAPP2417751874  
Lea County, New Mexico**

To Whom It May Concern:

Ensolum, LLC (Ensolum), on behalf of Oxy USA, Inc. (Oxy), has prepared the following *Reclamation Report* for the Lost Tank 25 Tankless CPF (Site). This *Reclamation Report* documents the Site history, reclamation activities completed to date, and proposes a vegetation monitoring plan.

**BACKGROUND**

The Site is located in Unit D, Section 31, Township 22 South, Range 32 East, in Lea County, New Mexico (32.3548056°, -103.7221667°) and is associated with oil and gas exploration and production operations on Federal Land managed by the Bureau of Land Management (BLM).

On June 21, 2024, a pressure relief valve opened due to an over pressured water line, resulting in the release of approximately 50 barrels (bbls) of produced water into the adjacent pasture. No free-standing fluids were recovered. Oxy reported the release to the New Mexico Oil Conservation Division (NMOCD) on a Notification of Release (NOR) Form on June 25, 2024. The release was assigned Incident Number nAPP2417751874.

Delineation and excavation of impacted soil was completed at the Site between June and December 2024. The final excavation area measured approximately 15,508 square feet. A total of approximately 2,298 cubic yards of impacted soil were removed during the excavation activities. Based on the delineation and excavation soil sample analytical results, a *Closure Request* was submitted to the NMOCD on February 14, 2025. The NMOCD approved the *Closure Request* on May 30, 2025.

Additional details regarding the release, Site Characterization, and excavation activities, and soil sample analytical results can be referenced in the approved *Closure Request*, included as an attachment to this report. Remediation of the release was completed in accordance with Title 19, Chapter 15, Part 29, Section 12 (19.15.29.12) of the New Mexico Administrative Code (NMAC).

**RECLAMATION ACTIVITIES**

Upon completion of excavation activities and receipt of final laboratory analytical results, the excavation was backfilled with locally procured topsoil and the disturbed area was restored to its original condition.

Oxy USA, Inc.  
Reclamation Report  
Lost Tank 25 Tankless CPF

The reclamation area is shown on the attached Figure 1. Photographic documentation of backfill activities was provided with the *Closure Request* and included in the photographic log attached as Appendix A.

As documented in the approved *Closure Request*, one representative 5-point composite sample (Mills Ranch Pit) was collected from the topsoil backfill material on September 30, 2024. The backfill soil sample was transported under strict chain-of-custody procedures to Cardinal Laboratories in Hobbs, New Mexico, for analysis of the following constituents of concern (COCs): total petroleum hydrocarbons (TPH)—gasoline range organics (GRO), TPH-diesel range organics (DRO), and TPH-oil range organics (ORO) following EPA Method 8015M/D; and chloride following Standard Method 4500.

Laboratory analytical results for the backfill soil sample confirmed compliance with NMOCD requirements for the reclaimed area to contain non-waste containing, uncontaminated, earthen material with chloride concentrations less than 600 milligrams per kilogram (mg/kg) and TPH concentrations less than 100 mg/kg. The laboratory analytical results are summarized in the approved *Closure Request*, attached as Appendix B.

The reclaimed pasture area was seeded on July 3, 2025, with the below BLM seed mixture #1 for loamy sites. The seed was applied with a broadcast seed spreader at double the rate specified in pounds of pure live seed (PLS) per acre to account for the application method.

Species/Cultivar	PLS/Acre
Plains lovegrass ( <i>Eragrostis intermedia</i> )	0.5
Sand dropseed ( <i>Sporobolus cryptandrus</i> )	1.0
Sideoats grama ( <i>Bouteloua curtipendula</i> )	5.0
Plains bristlegrass ( <i>Setaria macrostachya</i> )	2.0

Following broadcast seeding, the area was chained to cover the seed. Photographs of the backfilled excavation and seeding of the reclaimed area are provided in Appendix A.

## VEGETATION MONITORING

The Site will be monitored for vegetation growth to ensure that reclamation activities were successful. Focus for this phase will be to prevent erosion and Site degradation, and to monitor for and treat invasive and noxious weed species.

- Annual inspections will take place at the location to assess revegetation progress until vegetation is consistent with local natural vegetation density.
- If necessary, an additional application of the BLM seed mix will be applied.
- Noxious and invasive weeds will be identified and treated by licensed contracted herbicide applicator or mechanically removed.

A *Revegetation Report* will be submitted to the NMOCD and the BLM once vegetation growth in the reclaimed pasture area has uniform vegetative cover that reflects a life-form ratio of plus or minus 50 percent (%) of pre-disturbance levels and a total percent plant cover of at least 70% of pre-disturbance levels, excluding noxious weeds, per NMAC 19.15.29.13 D.(3).

## RECLAMATION APPROVAL REQUEST

Based on the reclamation activities completed to date and proposed vegetation monitoring plan described above, Oxy respectfully requests approval of this *Reclamation Report* and a status update to

## 1.0 INTRODUCTION

### 1.1 Site Description and Background

<b>Operator:</b>	Oxy USA, Inc. (Oxy)
<b>Site Name:</b>	Lost Tank 25 Tankless CPF
<b>Location:</b>	Unit D, Section 31, Township 22 South, Range 32 East 32.3548056° N, 103.7221667° W Lea County, New Mexico
<b>Property:</b>	Federal Land managed by the Bureau of Land Management (BLM)
<b>Regulatory:</b>	New Mexico Energy, Minerals and Natural Resources Department (EMNRD) Oil Conservation Division (OCD)

On June 21, 2024, Oxy had a release of produced water at the Site when the pressure relief valve opened due to an over pressured water line which resulted in a leak into the nearby pasture. The line was isolated, depressurized, locked, and tagged out. Approximately 50 barrels (bbls) of produced water was released onto the ground surface, with 0 bbls recovered. Oxy verbally reported the release to the New Mexico EMNRD OCD by email on June 21, 2024 and subsequently through the online notice of release (NOR) form on June 25, 2024. The release was subsequently assigned Incident Number nAPP2417751874.

The **Topographic Map** depicting the location of the Site is included as **Figure 1**, and the **Site Vicinity Map** is included as **Figure 2** in **Appendix A**.

### 1.2 Project Objective

The primary objective of the closure activities was to reduce chemicals of concern (COC) concentrations in the on-Site soil to be in compliance with the applicable New Mexico EMNRD OCD closure criteria concentrations.

## 2.0 CLOSURE CRITERIA

The Site is subject to regulatory oversight by the New Mexico EMNRD OCD. In order to address activities related to exempt oil and gas releases, the New Mexico EMNRD OCD references New Mexico Administrative Code (NMAC) 19.15.29 *Releases*, which establishes investigation and abatement action requirements for sites subject to reporting and/or corrective action. Ensolum, LLC (Ensolum) utilized information provided by Oxy, the general Site characteristics, and information available from the New Mexico Office of the State Engineer (OSE) and the New Mexico EMNRD OCD Imaging database to

determine the appropriate closure criteria for the Site. Supporting documentation and figures associated with the following bullets are provided in **Appendix B**, and included as **Figure 4** in **Appendix A**.

- No exploratory water wells were identified within a 0.5-mile radius of the Site on the OSE Water Rights Reporting System (WRRS) database.
  - The nearest well (C-04663-POD1) is located 0.6-miles east of the Site and has a total depth of 110 feet bgs with no groundwater encountered from September 2022. Due to the regional depth to groundwater being greater than 110 feet bgs and the site being in a low karst area, Ensolum requested a closure criteria variance to reflect groundwater >100 feet shown in Table 1 of 19.15.29.12 NMAC for all remediation in areas not reasonably needed for production or subsequent drilling operations (off-pad pasture areas) greater than 4 feet bgs. A depth to water variance was approved on July 17, 2024.
- The Site is not located within 300 feet of a New Mexico ENMRD OCD-defined continuously flowing watercourse or significant watercourse.
- The Site is not located within 200 feet of a lakebed, sinkhole, or playa lake.
- The Site is not located within 300 feet of a permanent residence, school, hospital, institution, or church.
- According to the OSE WRSS database, there are no private, domestic freshwater wells used by less than five households for domestic or stock water purposes identified within 500 feet of the Site.
- According to the OSE WRSS database, no freshwater wells have been identified within 1,000 feet of the Site.
- The Site is not located within incorporated municipal boundaries or within a defined municipal freshwater well field covered under a municipal ordinance adopted pursuant to New Mexico Statute Annotated (NMSA) 1978, Section 3-27-3.
- The Site is not located within 300 feet of a wetland.
- Based on information identified on the New Mexico Mining and Minerals Division's Geographical Information System (GIS), Maps, and Mine Data database, the Site is not located within an area overlying a subsurface mine.
- Based on the Karst Occurrence Potential (kmz) provided by the BLM, the Site is located within a stable area, also referred to as low karst potential.
- The Site is not located within a 100-year floodplain.

Based on the identified site criteria, cleanup goals for soils remaining in place at the Site include:

### 3.0 SOIL REMEDIATION ACTIVITIES

On June 21, 2024, Oxy had a release of produced water at the Site when the pressure relief valve opened due to an over pressured water line which resulted in a leak into the nearby pasture. The line was isolated, depressurized, locked, and tagged out. The line was isolated, depressurized, locked, and tagged out. Approximately 50 bbls of produced water were released onto the ground surface, with 0 bbls recovered.

On November 19, 2024, subsequent to excavation activities, Ensolum arrived at the Site to collect 37 composite sidewall soil samples from the excavation extent (SW01, SW02, SW08, SW10 through SW16, and SW18 through SW47) at a depth of 0-4 feet bgs. Due to heavy rainfall that had occurred in the days prior to sampling, the excavation extent was flooded, preventing safe collection of the excavation floor samples. Once the soils in the area were sufficiently dried out, sampling and remediation activities would resume.

On December 3, 2024, Ensolum arrived at the Site to collect the remaining excavation floor and excavation sidewall samples. During sampling activities, 40 composite floor soil samples were collected from the excavation extent (FS01 through FS40) at a depth of 4 feet bgs. Additionally, 10 composite sidewall soil samples were collected from the excavation extent (SW03 through SW07, SW09, SW17, SW34, and SW36) and one composite sidewall soil sample was collected subsequent additional excavation activities (SW35), all at a depth of 0-4 feet bgs. Based on laboratory analytical results, no further remediation activities were required at this time.

The composite soil samples were analyzed for benzene, toluene, ethylbenzene, and total xylenes (BTEX), total petroleum hydrocarbons (TPH), gasoline range organics (GRO), diesel range organics (DRO), motor oil/lube oil range organics (MRO), and chloride in accordance with the New Mexico EMNRD OCD Closure Criteria for Soils Impacted by a Release (NMOCD Closure Criteria).

The lithology encountered during the completion of closure activities consisted primarily of fine sands with sandy clay loam, Maljamar and Palomas fine sands, 0 to 3 percent slopes (MF).

The final excavation area measured approximately 896 feet long at its maximum extent and 4 feet at its minimum extent to 56 feet wide at its maximum extents, with a total depth of approximately 4 feet bgs.

The excavation measured approximately 15,508 square feet in aerial extent. A total of approximately 2,298 cubic yards (cy) of impacted soil was removed during the excavation activities. The impacted soil was transported and properly disposed of at the Lea Land Facility located in Hobbs, New Mexico. After completion of confirmation sampling, the excavation was backfilled utilizing material purchased locally from the Mills Ranch Pit and recontoured to match pre-existing conditions.

**Figure 3** is a map that identifies approximate soil sample locations and depicts the approximate dimensions of the impacted soil and excavation extent with respect to the surrounding pertinent features (**Appendix A**). Photographic documentation of the field activities is included in **Appendix C**.

#### 4.0 SOIL SAMPLING PROGRAM

Ensolum's soil sampling program from November 19, 2024, through December 3, 2024, included the collection of a total of 40 composite soil samples from the excavation floor (FS01 through FS40) and 48 composite soil samples from 47 sample locations on the excavation sidewalls (SW01 through SW47) for laboratory analysis.

The composite soil samples were collected and placed in laboratory-prepared glassware, labeled/sealed using laboratory-supplied labels and custody seals, and stored on ice in a cooler. The samples were relinquished to Cardinal Laboratories in Hobbs, New Mexico, under proper chain-of-custody procedures.

#### 5.0 SOIL LABORATORY ANALYTICAL METHODS

The composite soil samples were analyzed for BTEX following the United States Environmental Protection Agency (EPA) SW-846 Method 8021B, TPH GRO/DRO/MRO following EPA SW-846 Method 8015M/D, and chloride using SM4500Cl-B.

Laboratory analytical results are summarized in **Table 1**, **Table 2**, and **Table 3** in **Appendix D**. The executed chain-of-custody forms and laboratory data sheets are provided in **Appendix E**.

#### 6.0 DATA EVALUATION

Ensolum compared the benzene, total BTEX, TPH-GRO/DRO/MRO, and chloride concentrations or laboratory sample detection limits (SDLs) associated with the soils remaining in place at the Site to the applicable NMOCD Closure Criteria. The final composite soil samples collected from the Non-Vegetative Zone were compared to the NMOCD Closure Criteria for Soils Impacted by a Release (Non-Vegetative Zone), while the final composite soil samples collected from the Vegetative Zone were compared to the NMOCD Closure Criteria for Soils Impacted by a Release (Vegetative Zone).

- Laboratory analytical results indicated benzene concentrations for the soils remaining in place at the Site and the backfill soil sample did not exceed the laboratory SDLs or the applicable NMOCD Closure Criteria of 10 milligrams per kilogram (mg/kg).
- Laboratory analytical results indicated that total BTEX concentrations for the soils remaining in place at the Site and the backfill soil sample did not exceed the laboratory SDLs or the applicable NMOCD Closure Criteria of 50 mg/kg.
- Laboratory analytical results indicated that combined TPH-GRO/DRO concentrations for the soils remaining in place at the Site in the Non-Vegetative Zone did not exceed the laboratory SDLs and/or the applicable NMOCD Closure Criteria of 1,000 mg/kg for depth to groundwater >100 feet.
- Laboratory analytical results indicated that combined TPH-GRO/DRO/MRO concentrations for the soils remaining in place at the Site in the Non-Vegetative Zone did not exceed the laboratory SDLs and/or the applicable NMOCD Closure Criteria of 2,500 mg/kg for depth to groundwater >100 feet.
- Laboratory analytical results indicated chloride concentrations for the soils remaining in place at the Site in the Non-Vegetative Zone did not exceed the laboratory SDLs and/or the applicable NMOCD Closure Criteria of 20,000 mg/kg for depth to groundwater >100 feet.
- Laboratory analytical results indicated that combined TPH-GRO/DRO/MRO concentrations for the soils remaining in place at the Site and the backfill soil sample in the Vegetative Zone did not exceed the laboratory SDLs and/or the applicable NMOCD Closure Criteria of 100 mg/kg for depth to groundwater ≤50 feet.
- Laboratory analytical results indicated chloride concentrations for the soils remaining in place at the Site and the backfill soil sample in the Vegetative Zone did not exceed the laboratory SDLs and/or the applicable NMOCD Closure Criteria of 600 mg/kg for depth to groundwater ≤50 feet.

Laboratory analytical results are summarized in **Table 1** and **Table 2** in **Appendix D**.

## 7.0 RECLAMATION AND RE-VEGETATION

The release occurred off-pad, and as such, a reclamation requirement of 600 mg/kg chloride and 100 mg/kg TPH was applied to the top 4 feet of the off-pad area that was impacted by the release per 19.15.29.13.D (1) NMAC for the top 4 feet of areas that will be reclaimed following remediation. The following Reclamation Plan addresses reclamation of the off-pad area: The soil in the vicinity of the release includes: predominately fine sands with sandy clay loam, MF;

- The excavation was backfilled with locally sourced topsoil from the Mills Ranch Pit and recontoured to match the surrounding grade. The backfill soil sample analytical results will be included in the Reclamation and Revegetation Reports;
- The backfilled areas will be seeded utilizing a weed-free seed mix designed by the BLM to meet reclamation standards for this region, which will be Loamy Sand/Fine Sandy Loam (SD-3/CP-2) Sites Seed Mixture;
- The seed mixture will be distributed with one of the following methods: push broadcaster seed spreader/tractor-operated broadcast seed spreader/drill seeding/other means;
- Application of the seed mixture will be at a coverage of either 10 pounds of seeds per acre of reclaimed pasture with distribution by a drilling method or 20 pounds of seeds per acre of reclaimed pasture with distribution by a broadcast method, whichever is more applicable;
- Erosion control management will potentially include:
  - The placement of wattles in areas with a propensity for high run-off rates;

- Straw cover if high winds are anticipated to support moisture retention and limit wind from blowing seeds away before they have had time to germinate; and/or
- Other erosional control best management practices (BMP) as necessary to support timely and healthy regrowth of vegetation in disturbed areas.
- Backfilling of the excavation has already been completed. The backfill soil sample analytical results are included as **Table 3 (Appendix D)** and will be included in the Reclamation and Revegetation Reports;
- Seeding is anticipated to be completed in the spring/summer when temperatures and precipitation are most conducive for vegetation growth. In general, seeding should occur approximately one month after the last frost in the Spring up until approximately one month prior to the first fall frost;
- Annual inspections (at a minimum) will take place on the location until revegetation is consistent with local natural vegetation density. The Site will be inspected the following Spring/Fall to assess the success of regrowth. If necessary, an additional application of the BLM-approved pure live seed mixture will be applied as well, and any needed BMPs will be installed to support growth and limit erosion;

## 8.0 FINDINGS AND RECOMMENDATION

- On June 21, 2024, Oxy had a release of produced water at the Site when the pressure relief valve opened due to an over pressured water line which resulted in a leak into the nearby pasture. The line was isolated, depressurized, locked, and tagged out. Approximately 50 bbls of produced water were released onto the ground surface, with 0 bbls recovered.
- Ensolum's soil sampling program from November 19, 2024, through December 3, 2024, included the collection of a total of 40 composite soil samples from 40 locations from the excavation floor (FS01 through FS40) and 48 composite soil samples from 47 locations from the excavation sidewalls (SW01 through SW47) for laboratory analysis. The composite floor samples were collected at a depth of 4 feet bgs, and the composite sidewall samples were collected at a depth of 0-4 feet bgs.
- The primary objective of the closure activities was to reduce COC concentrations in the on-Site soil to be in compliance with applicable NMOCD Closure Criteria for Soils Impacted by a Release using the New Mexico EMNRD OCD's NMAC 19.15.29 *Releases* as guidance.
- The final excavation area measured approximately 896 feet long at its maximum extent and 4 feet at its minimum extent to 56 feet wide at its maximum extents, with a total depth of approximately 4 feet bgs.
- Based on laboratory analytical results, the final composite soil samples collected from the excavation area and the backfill soil sample did not exhibit benzene, total BTEX, TPH GRO/DRO/MRO or chloride concentrations above the applicable NMOCD Closure Criteria.
- Subsequent to the results of the final composite soil sampling, the excavation was backfilled with locally sourced topsoil from the Mills Ranch Pit and recontoured to the original surrounding grade. Once the areas are brought back to their original grade, a BLM-approved seed mixture will be sown into the surface of the backfill for re-vegetation per the above-stated Reclamation Plan.

**Based on field observations and laboratory analytical results, no additional investigation or corrective action appears warranted at this time.**

Good morning Kelly,

Thank you for the correspondence. Your variance toward the depth to water determination > 100 feet below ground surface is approved.

Please keep a copy of this communication for inclusion within the appropriate report submittal.

The OCD requires a copy of all correspondence relative to remedial activities be included in all proposals and/or final closure reports. Correspondence required to be included in reports may include, but not limited to, notifications for liner inspections, sample events, spill/release/fire, and request for time extensions or variances.

Good evening,

On behalf of Oxy USA Inc, Ensolum, LLC would like to request a Closure Criteria Variance for the Lost Tank 25 Tankless CPF (Incident ID: nAPP2417751874).

Lost Tank 25 Tankless CPF (Incident ID: nAPP2417751874)

- An equipment failure on a flow line resulted in the release of 50 barrels of produced water, with 0 barrels of produced water recovered. The Site will be vertically and laterally delineated per NMAC 19.15.29.

Attached is groundwater research from the area surrounding the release. All nearby USGS and NMOSE wells indicate depth to groundwater greater than 100 feet bgs. The nearest borehole (C-04663-POD1) with depth to groundwater data is located 0.6 miles east of the release area and has a recorded total depth of the well at 110 feet bgs with no groundwater encountered from September 2022.

Due to the regional depth to groundwater being greater than 110 feet bgs and the site being in low potential karst area, Ensolum requests a Closure Criteria Variance to reflect groundwater > 100 feet as shown in Table 1 of 19.15.29.12 NMAC for all remediation in areas not reasonably needed for production or subsequent drilling operations (off-pad pasture areas) greater than 4 feet bgs.

Please let me know if you have any questions,

Good morning Kelly,

Thank you for the inquiry.

Your request to submit a sampling plan not to exceed 400 square feet (ft.<sup>2</sup>) for each five (5) point composite (5pc) from the excavation floor per 19.15.29.12D (1b) NMAC is approved. Sidewall confirmation sample(s) will abide at 200 ft.<sup>2</sup> for each 5pc per 19.15.29.12D (1c) NMAC. All other provisions addressed in 19.15.29.12D NMAC remain in effect.

Please keep a copy of this communication for inclusion within the appropriate report submittal.

Good afternoon,

On behalf of Oxy USA, Inc. (Oxy), Ensolum, LLC (Ensolum) requests a variance from the 200 square feet sampling requirement cited in 19.15.29.12 (D)(1)(c) for the Lost Tank 25 Tankless CPF (Incident ID: nAPP2417751874). Ensolum requests an alternate of 400 square feet, five-point composite samples collected from the Site. The current release extent is approximately 13,261 square feet, which would roughly equal 66 composite samples collected per the 200 square feet sampling requirement. If approved, the 400 square foot variance would decrease the number of samples collected to approximately 33 samples.

Attached is a Site Map depicting the site characterizations for the surrounding area.

With the provided information, Ensolum kindly asks that the OCD will acknowledge acceptance of this variance request. If you have any questions, please call or email.

Thank you,

**Subject:** Extension Request - Lost Tank 25 Tankless CPF (Incident ID: nAPP2417751874)

Good afternoon,

On behalf of Oxy USA, Inc, Ensolum, LLC would like to request a 90-day extension for the Lost Tank 25 Tankless CPF (Incident ID: nAPP2417751874). Excavation and remediation activities were delayed due to the size of the excavation requiring approximately 2 ½ months to complete. Throughout the excavation length and extent, multiple underground pipelines intersected, which was a potential safety issue when utilizing heavy equipment. To ensure the safety of personnel, a hydrovac, as well as hand shoveling, was utilized throughout the majority of the release which caused the remediation activities to occur over the course of 2 ½ months. Additionally, this area of New Mexico experienced heavy rainfall during the weekend of November 16<sup>th</sup>, 2024, which caused delays with sampling and additional excavation due to soils being too wet to sample and excavate safely. Remediation activities have been completed and backfill of the excavation is currently on-going pending approval from the landowner. Once complete, the Remediation Closure Request will be drafted and submitted to the portal for review.

We ask that you please approve this extension request for the reporting phase of this project. The Site characterization was uploaded to the NMOCD Portal on 6/27/2024. I have attached a Site Closure Criteria map along with the bore log for C-04663POD1, drilled on 9/1/2022, which is southeast of the site approximately 0.6-miles and with a total depth of 110' with no groundwater encountered. Oxy received a DTW variance approval from the OCD to utilize this well on July 17, 2024.

Please let us know if you have any questions.

Thank you,

Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see Subparagraph (a) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

<b>Nature and Volume of Release (continued)</b>	
Is this a gas only submission (i.e. only significant Mcf values reported)	No, according to supplied volumes this does not appear to be a "gas only" report.
Was this a major release as defined by Subsection A of 19.15.29.7 NMAC	Yes
Reasons why this would be considered a submission for a notification of a major release	From paragraph A. "Major release" determine using: (1) an unauthorized release of a volume, excluding gases, of 25 barrels or more.
With the implementation of the 19.15.27 NMAC (05/25/2021), venting and/or flaring of natural gas (i.e. gas only) are to be submitted on the C-129 form.	

**Initial Response**

The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury.

The source of the release has been stopped	True
The impacted area has been secured to protect human health and the environment	True
Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices	True
All free liquids and recoverable materials have been removed and managed appropriately	True
If all the actions described above have not been undertaken, explain why	Not answered.

Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

<i>The OCD recognizes that proposed remediation measures may have to be minimally adjusted in accordance with the physical realities encountered during remediation. If the responsible party has any need to significantly deviate from the remediation plan proposed, then it should consult with the division to determine if another remediation plan submission is required.</i>
