RE: Former Humble Pipe Line Company
Pump Station
SW Corner Section 25, T-25-S, R-36-E
Lea County, New Mexico

Dear Gentlemen:

I am writing on behalf of ExxonMobil Pipeline Company (EMPCo). Attached for your review is a copy of the "Site Closure Report" for the above noted location, prepared by BNC Environmental Services, and dated 10 March 2004.

ExxonMobil believes that we have satisfied the requirement of your Department and its regulations and is requesting the Department to issue a "No Further Action" or "Closure" letter. If there are any questions or comments, please contact me at 401.434.7358 or via E-Mail at "**michael.a.lamarre@exxonmobil.com**".

Sincerely,

Michael A. Lamarre
Project Manager

SECTION I INTRODUCTION

The Jay Anthony Site is located approximately two miles southwest of Jal, New Mexico in the southwest quarter of Section 25, T-25-S, R-36-E, Lea County, New Mexico (FIGURE 1). The property is owned by Mr. Jay Anthony and consists of approximately 2.63 acres which was the former location of a Humble Pipeline Company (HPCo) crude oil storage facility that operated in the late 1930s to mid 1940s (hereafter referred to as the "Site"). The site was divided into two tracts of land, designated as lease A and lease B, that HPCo leased from Naomi Humphres, the landowner at that time. The leases were terminated in 1945 and 1946 and the facilities were removed prior to lease expiration. In 2002, Mr. Anthony requested that ExxonMobil Pipeline Company (EMPCo) perform restoration activities at the site consisting of removal of hydrocarbon affected surface/subsurface soils, and concrete foundations/slabs associated with operation of the former HPCo storage facility. Additionally, Mr. Anthony requested that the excavated soils be transported off his property, the resulting excavation backfilled with clean soils and the construction affected area restored with native grass cover.

A document entitled "Soil Assessment Report and Remedial Workplan - Jay Anthony Site, Lea County, New Mexico" dated May 30, 2003 was prepared by BNC Environmental Services, Inc. (BNC) on behalf of EMPCo. The document was submitted to the New Mexico Energy, Minerals And Natural Resources Oil Conservation Division (NMOCD) and Mr. Jay Anthony for review on October 2, 2003. The document presented the findings of soil assessment activities (soil boring program) conducted by BNC in January 2003 and proposed a remedial workplan to address remedial actions requested by Mr. Anthony and also comply with the State of New Mexico site specific clean up criteria for soils contaminated by crude oil. The remedial workplan presented site preparation activities, an excavation plan, soil staging and hauling activities, confirmation soil sampling plan, waste management activities, site restoration activities, and proposed a site closure report to document the proposed work. Workplan activities were approved by Mr. Anthony. However, a response to BNC from the NMOCD was not obtained after contacting the Hobbs NMOCD office on October 9 and 13, 2003. Site preparation activities commenced on October 20, 2003. The Hobbs NMOCD office was contacted again on October 27, 2003 for regulatory comments on the remedial workplan and request that the NMOCD conduct a site visit. However, a response from the NMOCD was not obtained by BNC at that time.

This Site Closure Report has been prepared for ExxonMobil Refining and Supply, Global Remediation (EMGR) to document remedial activities performed at the Site between October 20, 2003 and December 12, 2003 and present the findings of the remedial activities. This work was performed in accordance to the Soil Assessment Report and Remedial Workplan that was submitted to the NMOCD and the landowner. The work was performed under the constant surveillance of Mr. Anthony. Consequently, additional activities were performed to complete the soil remediation and site restoration activities to the satisfaction of the landowner. The results of these remedial activities indicate that the site is eligible for closure in accordance with the applicable NMOCD guidelines. No further action is recommended or planned for this site.

Released to Imaging: 2/10/2026 3:00:25 PM

SECTION II REGULATORY FRAMEWORK

The State of New Mexico Energy, Minerals and Natural Resources Oil Conservation Division (NMOCD) has regulatory jurisdiction over oil and gas production operations including crude oil pipeline spills and associated closure activities in the State of New Mexico. Soil assessment and remedial activities should be conducted under the regulatory guidance of the NMOCD, which requires that soil affected by a crude oil spill be remediated in such a manner that the potential for future affects to groundwater or the environment are minimized. The NMOCD cleanup levels are determined on a site-by-site basis and are based on ranking criteria that is outlined in the NMOCD "Guidelines for Remediation of Spills, Leaks, and Releases" dated August 13, 1993. These ranking criteria guidelines are based on the following site characteristics: depth to groundwater, wellhead protection (useable water sources), and distance to surface water.

BNC searched the New Mexico Office of the State Engineer's groundwater data base for depth to groundwater data in the vicinity of the site. No records were available within a one mile radius search of the site. However, an onsite and currently inactive groundwater supply well originally pumped by a windmill is located within 200 feet of the area of concern. Depth to groundwater in this well was reported by Mr. Anthony to be in excess of 100 feet below ground surface (bgs). There is no evidence of surface waters present within 1000 feet of the site. FIGURE 1 presents the site location and surrounding area on the attached Jal Quadrangle, Lea County, New Mexico U.S.G.S. topographic map.

The table below illustrates the criteria for site-specific characteristics used by the NMOCD and the ranking score for the Site:

CHARACTERISTIC	SELECTION	SCORE
Depth to Groundwater	> 50 feet	0
Wellhead Protection Area	<1000 feet	20
Distance to Surface Water	>1000 feet	0

Total Ranking Score = 20

Based on the presence of the onsite water supply well (well head protection criteria), the ranking score attributed to the site is greater than 19. Consequently, the ranking criteria soil cleanup levels of 10 mg/Kg benzene, 50 mg/Kg total Benzene, Toluene, Ethylbenzene, and Xylenes (BTEX) and 100 mg/Kg Total Petroleum Hydrocarbons (TPH) would apply for remedial and closure activities at the site.

Released to Imaging: 2/10/2026 3:00:25 PM

SECTION III SOIL REMEDIATION ACTIVITIES

A detailed site chronology of the soil remediation activities performed between October 20 and December 12, 2003 is included in APPENDIX A.

HEALTH AND SAFETY

A site specific Safety and Health Plan (SSSHP) was developed by BNC and approved by EMGR prior to conducting soil excavation, transport and backfilling activities. Safety and health issues associated with this project included working around excavations, heavy equipment, hydrocarbon-affected soils, and crude oil pipelines. The BNC project manager implemented the SSSHP in the field. Tailgate safety meetings were implemented each morning prior to beginning work activities and as appropriate, in accordance with SSSHP objectives.

In addition to SSSHP tasks, site work was performed in accordance to EMGR Operations and Integrity Management System (OIMS) requirements. OIMS requirements included: project start notification, contractor orientation meetings, pre-start safety review, and job safety analysis (JSA) form completion, and completion of waste shipment documentation forms.

BNC was responsible for utility notification and lockout/tagout of any electrical energy sources associated with site work. The work area included an active below ground crude oil pipeline operated by Enron Oil Transportation and Trading Company (EOTT). Based on conversations with EOTT personnel, BNC installed a road with an estimated five feet of soil cover over the subsurface pipeline. Equipment and transport traffic was restricted to this crossing during construction activities. EOTT was contacted periodically during remedial activities to facilitate safe working conditions around the crude oil pipeline.

SITE PREPARATION

Several site preparation activities were performed prior to the excavation of hydrocarbon affected soils and concrete removal activities. On October 20, 2003, upon notification to proceed with remedial workplan activities by EMGR, BNC mobilized heavy equipment to the Site and initiated site preparation activities.

On October 21, 2003, BNC began construction of an east-west caliche access road (FIGURE 1) to facilitate the movement of heavy equipment for the proposed remedial activities. The road was built by transporting approximately 2,130 cubic yards (cy) of caliche obtained from a borrow pit owned by Mr. Jay Anthony (FIGURE 1). The road, approximately one-half mile in length, was approved by and is situated on property owned by Mr. Anthony. A turnout roadway was constructed near the midpoint of the access road to mitigate traffic congestion. Where the road crossed the EOTT pipeline right of way (ROW), an additional two feet of caliche was mounded and compacted over the pipeline, resulting in EOTT's recommended 5 feet of cover. A circle drive was installed at the end of the caliche road to provide an area for truck loading and unloading activities. Road building activities were completed on October 27, 2003. FIGURE 2 displays the access road, circle drive, soil loading stockpile, truck loading area other site features.

Additional site preparation activities included mesquite and brush removal from the work areas and leveling off and staging sand mound material from the excavation areas. Grubbed

mesquite and brush was staged at a location east of the EOTT ROW and south of the concrete slabs. The brush stockpile was ultimately moved to a clear area by Mr. Anthony and burned. The sand mound material was stockpiled along the EOTT ROW just west of the pipeline and within the loop of the access road circle drive and soil samples analyzed for future use as backfill material. The sand mound stockpiles are identified as B-Top NSP, B-Top SSP, Loop-SPW and Loop-SPE. Clean soil scraped up as a result of access road building activities was also staged at the site for future use as backfill material. This soil was stockpiled on site and identified as CSP-West and CSP-East. Soil samples from the six stockpiles were also submitted for laboratory analyses. FIGURE 2 displays the areas used to stage the sand mound and road building stockpiles and nomenclature used for soil sample identification. TABLE I presents the analytical results of the soil stockpile sampling to exhibit hydrocarbon concentrations below NMOCD remediation guidelines.

As outlined in the Remedial Workplan and FIGURE 2, excavation work was proposed in three distinct areas. Approximately 1.2 acres of hydrocarbon affected soils located west of the EOTT ROW were divided into two areas designated as Remedial Excavation A (RE-A) and Remedial Excavation B (RE-B) areas. The RE-A area was defined as the west half of the hydrocarbon affected area and consisted of grid cells A, B, E, F, I, J, M, N, Q, R and U. An asphaltic ring area, located in the southern half of the RE-A area, was identified as the primary area for proposed excavation activities. A second and less pronounced surficial ring scar, located in the northern portion of the RE-A area, was also targeted for excavation activities. The RE-A area had been identified from soil boring data to contain hydrocarbon affected soils to depths ranging from the surface to at least four feet below ground surface (bgs). The RE-B area consisted of the eastern half of the hydrocarbon affected area and included grid cells C, D, G, H, K, L, O, P, S and T. The RE-B area had been assessed to contain relatively shallower impacts of hydrocarbon affected soils ranging in depths from the surface to approximately one foot bgs. Remedial Excavation C (RE-C) consists of lands located east of the EOTT ROW. The area was targeted for concrete removal and surface grading based on previous conversations with Mr. Anthony.

EXCAVATION METHODOLOGY

Excavation activities were performed utilizing a Catapillar 325 tracked excavator and a Catapillar D-6 Dozer. The excavator was used to begin excavation activities at the south end (asphaltic ring area) of RE-A. Concurrently, the dozer was used to begin excavation activities in the RE-B area. Excavated soil was staged and stockpiled in the southern portion of RE-B (grid cells S and T), along the north side of the access road (FIGURE 2). From this location excavated soil was loaded to transport trucks for offsite disposal.

As excavation activities progressed, soil samples were periodically collected from the walls and floor areas of the excavations at depths and locations based on the judgment of BNC field personnel to assess the completeness of the soil removal activities. The soil samples were field screened which consisted of visual and olfactory observations as well as head space analysis. Head space analysis consisted of placing the soil sample in a ziplock plastic bag leaving a headspace for volatile organic compounds (VOCs) to collect. After sufficient time had passed to allow for volatilization, the headspace in each bagged sample was measured using a RAE Systems Manufactured UltraRAE Photo ionization Detector (PID) calibrated to a 100-ppm isobutylene standard. Areas exhibiting excessive VOC concentrations and/or visual impacts and/or non-favorable laboratory analytical results were over-excavated and re-sampled until hydrocarbon concentrations were documented by laboratory methods to be below regulatory guidelines. Field screening of soil samples served as an aid in determining excavation limits, however, horizontal and vertical

Released to Imaging: 2/10/2026 3:00:25 PM

delineation of excavated areas to regulatory guidelines was ultimately determined by laboratory analyzed confirmation soil samples.

REMEDIAL EXCAVATIONS A AND B

FIGURE 3 displays excavated areas located within the hydrocarbon affected RE-A and RE-B areas as well as confirmation soil sample locations, laboratory derived TPH results and the associated grid cell location overlay. Excavation depths are color coded as defined in the key.

Excavation

Excavation activities in the RE-A and RE-B areas were initiated on October 28, 2003. The tracked excavator was used to begin excavation of affected soil in the asphaltic ring area located in the southern half of the RE-A area. Concurrently, the dozer was used to begin excavation activities in the projected shallow RE-B excavation area. As excavation of the southern asphaltic ring area continued, the bulldozer was used to excavate the upper two feet of soil in the RE-B area and ultimately the upper three feet of soils located north of the southern asphaltic ring area. Subsequent to lowering the elevation of the RE-A and RE-B areas, further excavation was conducted within specific areas where hydrocarbon staining was observed at the lowered ground surface.

Excavation of specific areas located in the RE-A area included targeted locations proposed in the Remedial Workplan. Targeted excavation areas included the south asphaltic ring area, a small area identified as grid cell U (south of grid cell R), in which the upper 1.5 feet of surficial asphaltic staining was removed, and a northern ring scar area located in grid cells, A, B, C, F and G that was excavated to a depth of approximately four feet bgs. An area located in grid cells F and J was excavated to a depth of approximately 4.5 feet bgs and an area measuring approximately 75 feet by 50 feet, located south of grid cell Q (southwest corner of RE-A), was excavated to a depth of four feet bgs.

The south ring area in RE-A required several confirmation sampling and over-excavation events to obtain results below NMOCD remediation limits. Final confirmation sample depths ranged from eight to 12 feet bgs in the northwest portion to 18 to 20 feet bgs in the southeast portion. Excavation to these depths was unexpected (based on analytical results of the initial soil assessment) and required benching and sloping of the excavation walls.

No specific areas located within the RE-B area were originally targeted for excavation deeper than two feet bgs. However, soil staining was observed at the lowered ground surface in an grid cells G and H (RE-B area). This area was excavated to an ultimate depth of eight feet bgs.

Confirmation soil samples were obtained as excavation activities progressed. Excavation activities for individual 50 feet by 50 feet grid cell areas were completed based on favorable analytical results and field observations. Excavation activities in the RE-A and RE-B areas were completed on November 20, 2003 after analytical results from the final soil sampling event indicated that all grid area sample locations (including over-excavation areas) exhibited BTEX and TPH concentrations below regulatory guidelines.

Released to Imaging: 2/10/2026 3:00:25 PM

Soil Loading and Transportation

Hydrocarbon affected soils removed from the RE-A and RE-B areas were staged just north of the access road in grid cells S and T. Transport trucks capable of hauling approximately 14 to 21 cubic yards (cy) entered the site from the east and used the south leg of the circle drive to swing around to the loading area and exit the site to the east (FIGURE 2). Transport of hydrocarbon affected soil began on October 28, 2003 and was completed on December 5, 2003. An average of approximately 8 trucks worked each day hauling excavated soils from the site to J&L Landfarm, located in Hobbs, New Mexico for offsite disposal/treatment (See Section IV - Waste Management). The trucks averaged 5 round trips per day.

A Non-Hazardous Waste Transport Manifest accompanied each load which included information such as the name, address and phone number of the generator, name and address of the generating location, quantity and type of material being hauled, transporters name, address and phone number, the drivers name, state transporter's ID number and the name, address and phone number of the destination location. The manifests were signed and dated by BNC's construction manager (on behalf of EMGR) and the truck driver when leaving the site. An agent of J&L Landfarm signed the manifest as the load was received at the destination location.

Confirmation Sampling and Analytical Results

Confirmation soil samples were delivered to Southern Petroleum Laboratories in Houston, Texas (SPL) for TPH analysis by EPA Method 8015 (modified) for Gasoline Range Organics (GRO) and Diesel Range Organics (DRO) as required by NMOCD. Additionally, each soil sample was analyzed for Benzene, Toluene, Ethylbenzene, and Xylene (BTEX) EPA Method 8021B as required by NMOCD per the ranking described previously in this document. Each 4-ounce container was labeled, placed on ice in an insulated cooler, and chilled to a temperature of approximately 40^0F (4^0C). The cooler was sealed for shipment to the laboratory. Proper chain-of-custody documentation accompanied the samples to the laboratory. All samples were analyzed within the appropriate holding times for the respective analysis.

FIGURE 3 displays the location of confirmation soil samples obtained from the RE-A and RE-B areas as well as displaying the total TPH concentrations (GRO + DRO). TABLE I presents the BTEX and TPH analytical results of all confirmation soil samples collected and denotes soil samples that exhibited TPH concentrations above the regulatory guidelines of 100 mg/Kg with yellow highlighting. Highlighted soil samples are followed by a confirmation soil sample collected from the same area after over-excavation of the original area. Copies of the SPL certified analytical reports for the BTEX and TPH analyses of confirmation soil samples are provided in APPENDIX B. As demonstrated in the soil boring program, BTEX concentrations from the excavation confirmation sampling also exhibited concentrations well below (typically below laboratory detection limits) NMOCD remediation guidelines. The labeling or identification of confirmation soil samples typically consist of the individual samples grid cell location, followed by the depth bgs the sample was obtained (e.g. K-1.5'). Soil samples collected from an excavation wall are typically identified by the compass direction of the excavation wall and grid cell location followed by the depth on the wall the sample was collected (e.g. S Wall Q-3').

The Remedial Workplan submitted to the NMOCD and Mr. Jay Anthony, proposed that 20 floor and 8 wall confirmation soil samples from the RE-A area and 12 floor confirmation soil

Released to Imaging: 2/10/2026 3:00:25 PM

samples from the RE-B area and U grid cell be submitted for laboratory analyses. Soil samples from excavated areas were submitted to the laboratory as excavation activities progressed. A minimum of one confirmation soil sample per each grid cell (50 feet by 50 feet area) was collected and used to confirm that hydrocarbon affected soils were removed from the targeted excavation areas. A total of 55 confirmation soil samples were ultimately obtained from the RE-A and RE-B areas and analyzed by laboratory methods. Ten of these soil samples were collected in areas where the analytical results of a previous soil sample exhibited hydrocarbon concentrations above the regulatory requirements, thus targeting areas to be over-excavated. Twenty of the confirmation soil samples were obtained from the walls of excavated areas within the overall hydrocarbon affected area, west of the EOTT ROW. Additional confirmation soil samples were collected from the sand mound leveling and road building stockpile areas and submitted for laboratory analyses. These samples were identified as Loop SP-W, Loop SP-E, B-Top-NSP, B-Top-SSP, CSP West and CSP East. Analytical results indicated these stockpiled materials exhibited hydrocarbon concentrations below regulatory guidelines and were suitable for use as backfill material. FIGURE 2 displays the location and identification of soil samples collected from these stockpiles.

The exact location of confirmation soil samples was determined by BNC's field geologist to be most representative of the immediate area. Confirmation sampling activities were routinely discussed with Mr. Anthony, including inspection of field sketches showing confirmation soil sample locations, analytical results, as well as on site visual inspection of the excavated areas.

Ultimately, all final confirmation sample area locations exhibited BTEX and TPH concentrations below NMOCD remediation guideline levels.

Backfilling

As proposed in the Remedial Workplan, staged material exhibiting hydrocarbon concentrations below NMOCD remediation levels, would initially be utilized to backfill the selected portions of the RE-A area. The balance of material needed for raising the RE-A and RE-B areas back to original base surface elevation consisted of imported soils. Imported soils were comprised of soils obtained from a borrow area located near the Jay Anthony Ranch House (FIGURE 1).

Mr. Anthony approved initial backfilling activities on November 13, 2003 after reviewing analytical results and the sample location map for the site. On November 17, 2003, equipment was mobilized to the backfill borrow pit, located near the Anthony ranch house and was used to excavate and stockpile an estimated 8,000 cy of soil that would subsequently be transported to the site and used for backfill. This task was completed on November 20, 2003 and the equipment was mobilized back to the site to resume over-excavation activities in the south ring area. On November 21, 2003, transport trucks began delivering the imported soil to the site. The imported soil was temporarily staged on site pending final approval to backfill the remaining excavated areas (mainly the southern ring area). On November 25, 2003 analytical results for final confirmation soil samples indicated that all excavated areas had now been delineated to below regulatory guidelines. The final analytical results were reviewed with Mr. Anthony and permission was granted to begin full scale backfilling activities. On December 3, 2003 Paul Sheely with the NMOCD Hobbs District Office was on site to perform a walk through inspection of remedial activities. BNC presented the finalized analytical results of all confirmation samples to Mr. Sheely for his

review. Mr. Sheeley indicated that based on the analytical results of the confirmation samples, it was appropriate to continue with backfilling activities. Hauling clean imported soil and backfilling activities associated with the RE-A and RE-B areas was completed on December 5, 2003. All backfill material was compacted using the tracks of the bulldozer.

Ultimately, a total of 10,192 cy of clean soil was imported to the Site from the Anthony borrow pit for backfilling purposes

REMEDIAL EXCAVATION C

The Remedial Excavation C area is located east of the EOTT pipeline (FIGURE 2). As discussed with Mr. Anthony and outlined in the Remedial Workplan, the primary remedial objective for the location was the removal of concrete materials.

Concrete Removal

Activities to remove concrete foundations and pedestals in the RE-C area began on October 28, 2003. FIGURE 2 displays the former location of concrete slabs and pedestals that were removed from the site. A hammer hoe attached to a back hoe was initially utilized to begin breaking the concrete foundations. As this activity progressed, it was discovered that concrete pedestal area, averaging approximately 10 feet by 8 feet by approximately five feet in thickness, existed in the subsurface below the 4-inch concrete slab. The size of the larger concrete pedestal was not anticipated. The backhoe-attached hammer-hoe had little effect on busting out these pedestals and on November 7, 2003 the backhoe machine was replaced with a trackhoe mounted hammer-hoe. As the larger hammer-hoe busted the concrete slabs and pedestals to smaller pieces, the excavator equipped with a thumb attachment assisted in excavation, stockpiling and loading of the busted concrete. The front end loader was also used to load smaller pieces of broken cement. With the approval of Jay Anthony, the majority of busted concrete was loaded in 14 cy dump trucks and transported to a concrete disposal area located on Jay Anthony's property and covered with clean material from the backfill borrow pit (both sites-FIGURE 1). After inspection of the thick concrete pedestals, Mr. Anthony suggested that an area (located in the vicinity of the concrete removal area) be excavated for burial of the larger pieces of concrete. Concrete hauling activities were concluded on November 12, 2003 and the final burial of concrete was completed on November 13, 2003.

Surficial Soil Removal and Backfilling

The RE-C area was not targeted in the Remedial Workplan for hydrocarbon-affected soil removal, as assessment activities indicated relatively minor staining was observed in this portion of the property. At Mr. Anthony's request, soil from these surficial stained areas were removed on November 13, 2003. A second inspection by Mr. Anthony on December 1, 2003, resulted in the removal of several other small areas of surficial stained soil observed in the overall area. The soils were stockpiled at the soil loading area and hauled to J & L Landfarm. Staining in these areas was limited to the upper several inches of the surface.

Backfilling and leveling of the RE-C area was performed concurrent with backfilling activities of the RE-A and RE-B areas. A small portion of the clean imported soil was used in leveling and grading of the RE-C area. Backfilling activities at the site were completed on December 6, 2003.

Released to Imaging: 2/10/2026 3:00:25 PM

SITE RESTORATION

Mesquite and other brush removed and staged onsite were transported offsite and later burned by Mr. Anthony. At the request of Mr. Anthony, cotton compost was selected as a seed cover material. Beginning on December 4, 2003, BNC began hauling cotton compost from the Ocho Gin in Seminole, Texas, to the Site where it was temporarily staged. On December 8, 2003, the construction affected area was seeded by Mr. Anthony with a special blend of grass seed approved by Mr. Anthony and was covered with the cotton compost. Seeding and cover activities (quantity and methods) were performed under Mr. Anthony's direction. At the request of Mr. Anthony the eastern portion of the construction affected area was re-seeded on December 11, 2003 and re-covered with cotton compost. Site restoration activities were completed on December 12, 2003 with the last load of compost being spread over the site and the release of heavy equipment and work crews. A total of 312,340 pounds of cotton compost was delivered and spread over the site. Additional tasks performed prior to de-mobilization and as requested by Mr. Anthony included, repair of a cattle guard, additional covering of exported concrete at Anthony disposal pit with clean backfill soil and repairing selected sections of caliche road on the Anthony Ranch.

Released to Imaging: 2/10/2026 3:00:25 PM

SECTION IV WASTE MANAGEMENT

NMOCD PRE-APPROVAL

The waste management activities documented in this section were originally proposed in the BNC "Soil Assessment Report and Remedial Workplan - Jay Anthony Site, Lea County, New Mexico," dated May 30, 2003, submitted to the NMOCD and Mr. Jay Anthony for approval.

Hydrocarbon-affected soils removed from the site were identified for offsite disposal/treatment at the J&L Landfarm facility located south of Hobbs, New Mexico. J&L currently holds Permit NM-01-0023 from the New Mexico Energy, Minerals and Natural Resources Department – Oil Conservation Division (OCD), to operate a commercial surface waste management facility.

Ms. Martyne J. Kieling with the OCD was contacted by BNC on May 1, 2003 regarding the disposal/treatment of hydrocarbon-affected soils from the Jay Anthony Site at the J&L facility. Information based on existing analytical data collected at the site was presented to Ms. Kieling, informing her of the nature and magnitude of hydrocarbon-affected soils at the site. Included in that conversation were the results of waste characterization sample WC-1 that was collected on February 19, 2003. In a personal communication, Ms. Kieling reported that collection of additional analytical sample from a location at the Site exhibiting asphaltic and dark hydrocarbon stained soil located at the area of the former tank location could be utilized for supplementary waste profiling purposes of soils identified for disposal/treatment at the J&L facility.

Consequently, on May 2, 2003, a second waste characterization soil sample was collected from the former tank location at the Jay Anthony site. The soil sample, identified as WC-2 was submitted to SPL in Houston, Texas for waste profiling analyses. The supplementary analytical suite, as directed by Ms. Kieling, included TCLP RCRA (8) Metals, and TCLP Semi-volatile and Volatile Organics analyses. Review of the waste profile analytical data supports a non-hazardous classification. TABLE II displays the analytical results of WC-1 and WC-2 samples. The SPL certified analytical reports for the TCLP metals, semi-volatile and volatile analyses are attached in APPENDIX B.

The waste materials are further classified as non-exempt waste. As identified on the OCD Request for Approval to Accept Solid Waste Form C-138, the hydrocarbon-affected soils from a crude oil pipeline/pump station release have been analyzed to support a non-hazardous classification. The request for approval to accept solid waste for materials from this project was approved by signatures of representatives of J & L Landfarm and the New Mexico OCD on the C-138 Form dated May 21, 2003. Copies of Form C-138 – Request for Approval to Accept Solid Waste and Certificate of Waste Status are included in APPENDIX C.

SUMMARY

A total of 513 loads of hydrocarbon affected soils were manifested, resulting in a total of 9,765 cy of excavated soil being transported for the Site and received at the J&L Landfarm facility. Copies of the completed Non-Hazardous Waste Transport Manifests (Manifest #1 – #513) are included in APPENDIX D (Volume II).

Released to Imaging: 2/10/2026 3:00:25 PM

SECTION V SUMMARY OF FINDINGS

The following is a summary of findings for this Site Closure Report for the Jay Anthony Site in Lea County, New Mexico:

- Soil remediation and site closure activities were performed in accordance to tasks outlined in a BNC document entitled "Soil Assessment Report and Remedial Workplan - Jay Anthony Site, Lea County, New Mexico," dated May 30, 2003. This document was prepared by BNC on behalf of EMPCo and was submitted to the New Mexico Energy, Minerals and Natural Resources Oil Conservation Division (NMOCD) and the landowner, Mr. Jay Anthony for approval. The soil remediation workplan was approved by Mr. Anthony, however a response to BNC from the NMOCD was not obtained after repeated attempts were made to contact the NMOCD representative located in the Hobbs, New Mexico District Office prior to and after field activities began on October 20, 2003.

- Confirmation soil samples collected from within the RE-A and RE-B areas were analyzed to ultimately exhibit TPH and BTEX concentrations below NMOCD remedial clean up goals.

- Concrete slabs and concrete pedestals located in the RE-C area were transported offsite to a disposal pit owned by the landowner, Mr. Jay Anthony and covered with soils obtained from the Anthony backfill borrow pit. Larger pieces of broken concrete were buried on site with the approval of Mr. Anthony.

- A total 9,765 cubic yards of affected soils were hauled from the Site to the J & L Landfarm facility located near Hobbs, New Mexico. The materials were pre-approved for acceptance at J & L Landfarm by the NMOCD and facility owner.

- The excavations were backfilled with onsite, staged soils and soil from Anthony's offsite borrow area located near the Anthony ranch house. Stockpiled soils staged onsite during remedial activities were analyzed by laboratory methods and confirmed to exhibit hydrocarbon concentrations below the NMOCD regulatory guidelines before use as backfill material.

- A total of 10,192 cubic yards of imported soils was used to backfill remedial excavations at the Site.

- The Site was re-seeded and covered with 312,340 pounds of cotton compost under the direction and satisfaction of the landowner, Mr. Jay Anthony.

- Site work was performed between October 20 and December 12, 2003 under the constant surveillance of Mr. Anthony. Consequently, additional activities were conducted to complete the soil remediation and site restoration activities to the satisfaction of the property owner.

Released to Imaging: 2/10/2026 3:00:25 PM

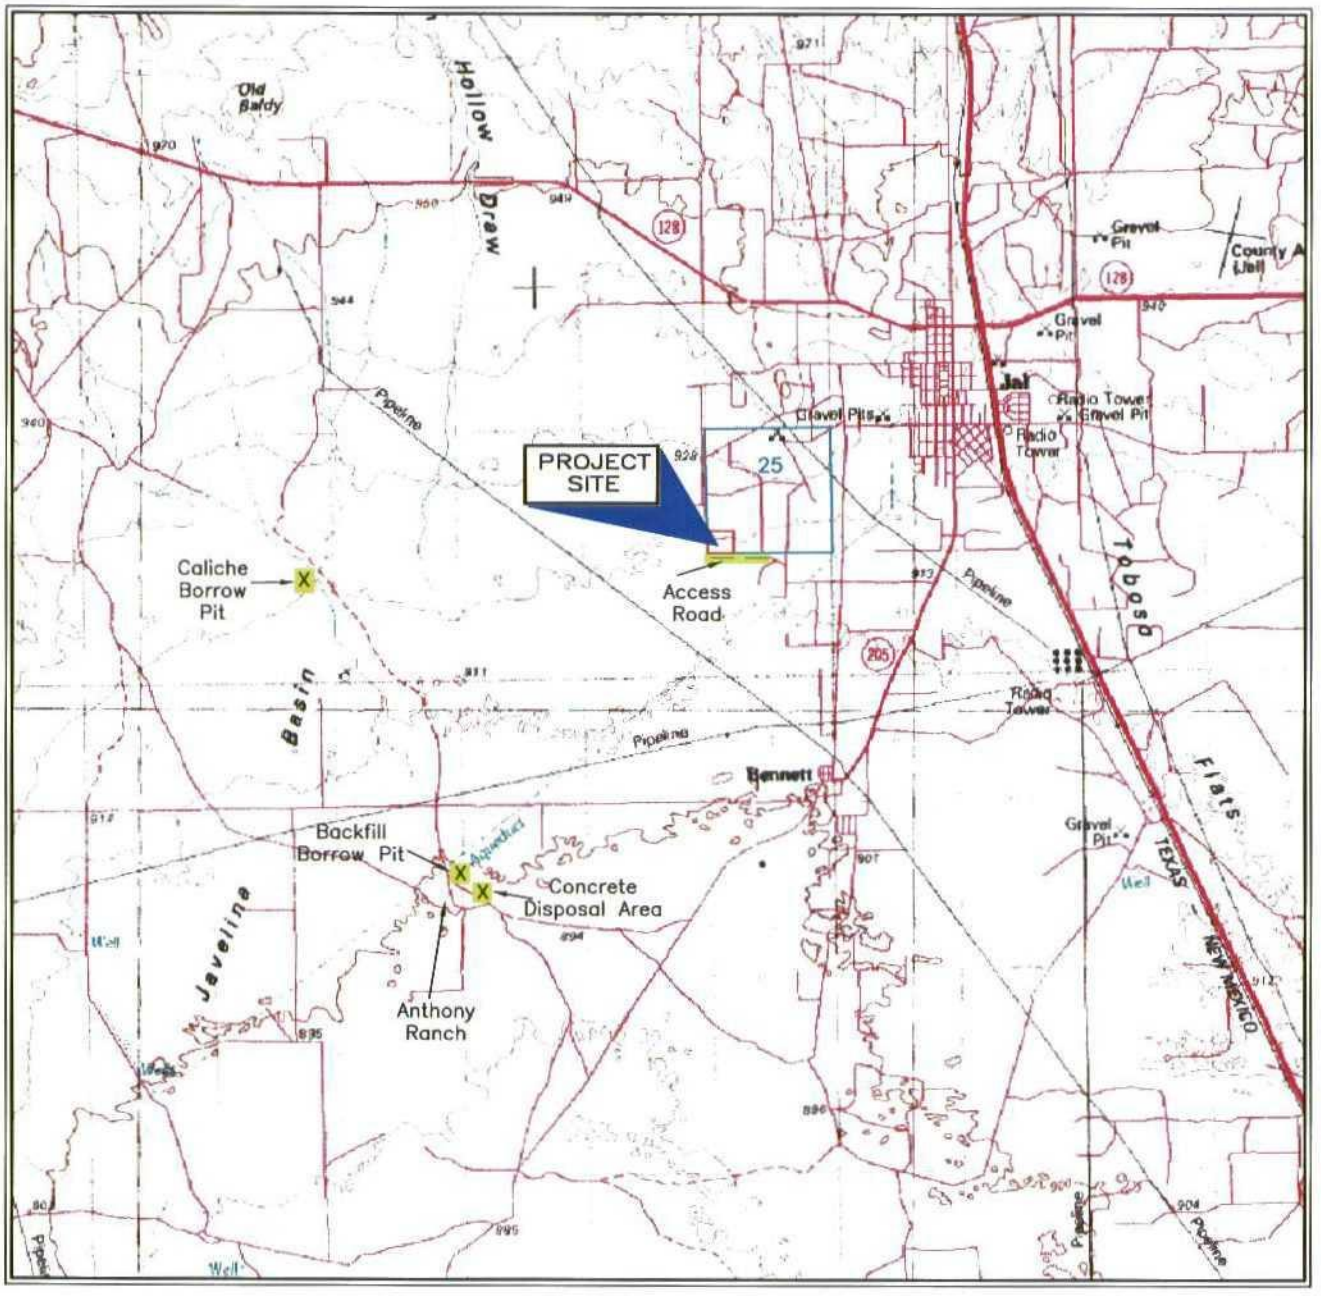

- The results of soil remediation activities indicate that the Jay Anthony Site is eligible for closure under the regulatory guidance of the NMOCD document "Guidelines for Remediation of Spills, Leaks, and Releases" dated August 13, 1993. Based on the information provided in this Site Closure Report, no further action is recommended or planned for this site.

SITE CHRONOLOGY - SITE PREPARATION AND REMEDIATION
ExxonMobil - Jay Anthony Site
Lea County, New Mexico

DATE	ACTIVITY
October 20, 2003	Dozer, motorgrader, and loader mobilized to site. BNC operators received ExxonMobil Contractor Orientation Training prior to site work. Pre-start Safety Review and SSSHP review performed with site workers.
October 21-27, 2003	Site access road construction activities. Dressed off road to caliche pit located 11.5 miles from remedial excavation. Bladed and added 2130 cubic yards of caliche to 0.5 miles site access road. Added caliche to EOTT pipeline crossing to provide 5 feet of cover over pipeline. Mike Lamarre with EMGR and Tom Larson w/BNC conducts safety meeting with BNC operators and truck drivers. Sample U @ 1.5' collected south of ring area. Excavator with thumb attachment and backhoe with hammer mobilized to site.
October 28, 2003	Start affected soil removal activities from south pad ring area. Collected air monitoring measurements during soil removal and staging operations-OK. Scrape top blow sand layer off of Excavation B area. Collected soil samples from "clean" stockpiles inside access road loop (Loop SP-W; Loop SP-E) and B excavation top layer (B-TOP-NSP; B-TOP-SSP). Hauled 595cy impacted soils to J & L. Chipping and hauling concrete from eastern area. Grubbing mesquite and staging near pipeline crossing.
October 29, 2003	Continue staging and removal of affected soils. Collected bottom sample (B Area Excavation G/H 7') from small excavation. Watered roads. Serviced equipment. Hauled 833 cy impacted to J & L. Note: in evening unknown persons drove heavy equipment at site - no damage to property observed. Air compressor stolen from site. Continue concrete chipping and hauling.
October 30, 2003	County Sheriff at site in morning to complete report on stolen compressor and criminal mischief activities. Continue staging and removal of affected soil in Excavation A area. Continue concrete chipping activities. Hauled 700cy impacted to J & L. Collected soil sampled from K & L grid cells (K-1.5'; L-1.5') and from side walls of small 7' deep excavation in Excavation B area (north, south, east and west walls @4').
November 3, 2003	Continue affected soil staging and removal activities. Collected soil samples from A and B grid cells in north end Excavation A area (A-3'; B-4') and Excavation B grid cells (C-2.5', D-2.5', G-2.5', H-2.5', O-2.5', and P-2.5'). Continue chipping of concrete pads in eastern work area. Hauled 518cy impacted to J & L.
November 4, 2003	Continue affected soil staging and removal activities as well as concrete chipping. Hauled 749cy impacted to J & L. Submit near miss report to Lamarre on criminal mischief of 10/29/03.
November 5, 2003	Continue affected soil staging/removal and concrete chipping activities. Now staging soils from Excavation Area A that appear clean in stockpiles on Excavation Area B for subsequent soil sampling. Collected grab samples from grid cells in Excavation Area A (E-2.5', F-3.0', J-2.5', J-4.5', N Wall A-2.5', N Wall B-2.5') and in Excavation Area B (B Excavation G/H 8' and T-2.5'). Hauled 749cy impacted to J & L - total to date 4,144cy.
November 6, 2003	Continue affected soil staging/removal and concrete chipping activities. Staging "clean" soils from Excavation Area A or Excavation Area B. Stockpiling concrete. Hauled 707 cy impacted soils to J & L. Collected 16 samples. (I @ 2.5'; CSP East; CSP West; M @ 10'; N Wall M 4'; E Wall M 4'; N @ 8'; N Wall N 4'; West Wall E 2.5'; West Wall I 2.5'; R @ 4.0'; Q @ 8'; Q @ 4'; W Wall Q 3'; S Wall Q 3'; Excavation G/H S Wall #2-4')
November 7, 2003	Mobilized trackhoe hammer to site to replace backhoe hammer for concrete busting for subsequent onsite burial. Hauled 686cy impacted soils to J & L.
November 10, 2003	Making good progress on busting out 5' thick concrete pedestals with trackhoe hammer. Collected confirmation soil samples from South Ring in Excavation Area A: (E Wall N-4'; E Wall R-5'; S Wall R-5' SE; and S Wall R-5' SW) and Excavation Area B: (O-3'; S-2.5'). All grid cell areas in excavation A and B have been sampled. Thirteen of 20 grid cells have cleared. Grid cells A, B, C, D, E, F, G, H, J, K, L, P, and T have confirmation concentrations below regulatory levels. Results pending on grid I, M, N, O, Q, R, and S as well as stockpiled clean materials (ESP East, CSP West) Hauled 665 cy impacted soils to J & L - total to date 6,202 cy.
November 11, 2003	Continue busting, hauling and burying concrete pedestals. Hauled 511cy impacted soils to J & L.
November 12, 2003	Excavate South Ring area to collect deeper confirmation samples in grid cells R, M, and N to depths of 19', 12' and 10', respectfully (R-19', M-12' and N-12'). Finished concrete haul off, will bury remaining concrete onsite tomorrow. Hauled 238 cy to J & L, total to date 6,951 cy. Sloping excavation sidewall at south edge of grid R for safety considerations.
November 13, 2003	Began backfilling shallow excavations in north part of Excavation Area A with excavated and stockpiled soils exhibiting concentrations below 100 mg/Kg TPH. Cleaned out deeper excavations in south part of Excavation Area A. Collected samples in M and N grid cells: M-2.5'; RN-18' and E Wall N-12'. Hauled 700 cy impacted soils to J & L. Scraped small shallow affected soil areas around concrete area.
November 14, 2003	Continue dressing up concrete area and scraping out shallow affected soils for haul off. Removing mesquite and stockpiling clean sand along access road. Hauled 637 cy impacted soils to J & L - 8,288 cy to date.
November 15, 2003	Continue mesquite clean out and stockpiling of soils from south side of access road. Hauled 546 cy clean backfill from access road and staged near remedial excavation.
November 17, 2003	Mobilized trackhoe, dozer and loader to backfill source area. Remove mesquite from dunes with trackhoe. Use dozer and loader to prep approximately 8000 cy for loading and transportation to remedial excavation area.
November 18, 2003	Continue staging of backfill material at source area using trackhoe, dozer and loader. Waiting on analytical results

SITE CHRONOLOGY - SITE PREPARATION AND REMEDIATION
ExxonMobil - Jay Anthony Site
Lea County, New Mexico

DATE	ACTIVITY
November 19, 2003	Complete staging of backfill material at source area. Analytical results from samples collected Nov. 12 & 13: R-19'; M-12'; N-10'; RN-18' and E Wall N - 12' indicate over-excavation at these locations.
November 20, 2003	Move dozer, loader and trackhoe to remedial excavation area. Over-excavate in grid areas R, M, N around south ring as indicated from 5 sample locations with concentrations reported on Nov. 19. Collected 5 samples: M-14'; N-12'; R-20', RN-20' and E Wall N #2 - 12'. Hauled 196 cy impacted soils to J & L. Placed 546 cy of clean backfill in north portion of Excavation Areas A & B.
November 21, 2003	Hauling out impacted soils from 11/20 overexcavation activities - 420 cy to J & L, total 8,904 cy to date. Also hauling in material to stage for backfilling - 1092 cy to remediation site.
November 22, 2003	Haul in backfill material to stage for backfilling - 812 cy. Prep site for large scale backfilling.
November 24, 2003	Haul in backfill material to stage for backfilling - 1,344 cy. Total imported backfill staged at site to date is 3,794 cy. Received analytical on 5 samples collected on 11/20/03 - all concentrations below cleanup levels. Prep site for large scale backfilling.
November 25, 2003	Reviewed analytical results with Jay Anthony, landowner - approved large scale backfilling operations. All confirmation sample locations, especially areas overexcavated - exhibit concentrations below cleanup goals. Began filling deeper levels of excavations first with soils analyzed to have concentrations below cleanup goals. Will top off excavations with imported clean soils. Brought in 1,414 cy clean soils for backfilling - total backfill to date is 5,208 cy. Secured site: shut down for Thanksgiving holiday.
Nov. 26-30 2003	Shutdown for Thanksgiving Holiday
December 1, 2003	BNC met with landowner to discuss project status and planned completion activities. Hauled in 1,134 cy clean backfill (6,342 cy to date). Back hauled 70 cy of impacted soils to J & L. Removing small areas of impacted soils around site. Backfilling deep excavation with dozer.
December 2, 2003	Hauled in 826 cy clean backfill and hauled off 112 cy impacted. Continue backfilling of remedial excavations
December 3, 2003	Hauled in 686 cy clean backfill (7,854 to date) and hauled off 175 cy impacted (9,261 to date). Continue backfilling of remedial excavations. Paul Sheely with NMOCD onsite to walk through site - presented him with analytical results of confirmation samples. He indicated that it was appropriate to continue with backfilling operations.
December 4, 2003	Hauled off impacted soils - 476 cy to J & L today, 9,737 to date. Did not haul backfill as county road crews were working on haul road. Hauled in 35,600 pounds of cotton compost and staged onsite. Spread out remaining onsite backfill materials.
December 5, 2003	Hauled in 1,092 cy backfill. Finished backfilling of area west of pipeline. Too windy to spread seed. Hauled in 37,680 pounds of cotton compost. Hauled off 28 cy of impacted soils to J & L - 9,765 cy job total. Backfilling east side of pipeline.
December 6, 2003	Hauled in 1,246 cy of backfill from borrow pit, job total 10,192 cy. Backfilling task completed at remedial excavation site.
December 8, 2003	Spot caliche along road to caliche pit. Seeded construction affected area around former remedial excavation. Hauled in 26,580 pounds of cotton compost. Spread cotton compost over construction affected area.
December 9, 2003	Haul backfill from source area to cover up concrete in Anthony disposal pit. Brought in 34,060 pounds of cotton compost.
December 10, 2003	Fix cattleguard. Repaired road stretch from backfill source area 3 miles toward caliche pit with loader and walking trackhoe over chunks. Level out sand stockpile by source area. Hauled in two more loads of cotton - 34,040 pounds).
December 11, 2003	Re-seed eastern portion of construction affected area. Spread cotton compost over seeded area. Hauled in 89,080 pounds of cotton compost.
December 12, 2003	Hauled in 54,460 pounds (3 loads) of cotton compost and spread over eastern portion of site - total cotton compost utilized as cover - 312,340 pounds. Completed site restoration activities. Released trackhoe and loader. Field work portion of project complete.

Due to a laboratory error, this report has been revised to include Toluene by SW846 Method 8021B. SPL apologizes for any inconvenience this error may have caused you or your company.

Matrix spike (MS) and matrix spike duplicate (MSD) samples are chosen and tested at random from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. Since the MS and MSD are chosen at random from an analytical batch, the sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The Laboratory Control Sample (LCS) and the Method Blank (MB) are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

Any other exceptions associated with this report will be footnoted in the analytical result page(s) or the quality control summary page(s).

Please do not hesitate to contact us if you have any questions or comments pertaining to this data report. Please reference the above Certificate of Analysis Number.

This report shall not be reproduced except in full, without the written approval of the laboratory. The reported results are only representative of the samples submitted for testing.

SPL, Inc. is pleased to be of service to you. We anticipate working with you in fulfilling all your current and future analytical needs.

Preparation Date: 10/31/2003 9:21 Prep By: DMN Method SW3550B

Analyte	Spike Added	Result	Percent Recovery	Lower Limit	Upper Limit
Diesel Range Organics	83	88	106	65	150

Matrix Spike (MS) / Matrix Spike Duplicate (MSD)

Sample Spiked: 03101099-02
RunID: HP_V_031031E-1938414 Units: mg/Kg
Analysis Date: 11/03/2003 23:25 Analyst: AM
Preparation Date: 10/31/2003 9:21 Prep By: DMN Method SW3550B

Analyte	Sample Result	MS Spike Added	MS Result	MS % Recovery	MSD Spike Added	MSD Result	MSD % Recovery	RPD	RPD Limit	Low Limit	High Limit
Diesel Range Organics	9.31	83	92	99.3	83	84	90.4	8.44	50	21	175

Qualifiers:
ND/U - Not Detected at the Reporting Limit
B - Analyte detected in the associated Method Blank
J - Estimated value between MDL and PQL
MI - Matrix Interference
D - Recovery Unreportable due to Dilution
* - Recovery Outside Advisable QC Limits
N/C - Not Calculated - Sample concentration is greater than 4 times the amount of spike added. Control limits do not apply.

The percent recoveries for QC samples are correct as reported. Due to significant figures and rounding, the reported RPD may differ from the displayed RPD values but is correct as reported.

Due to a laboratory error, this report has been revised to include Toluene by SW846 Method 8021B. SPL apologizes for any inconvenience this error may have caused you or your company.

Matrix spike (MS) and matrix spike duplicate (MSD) samples are chosen and tested at random from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. Since the MS and MSD are chosen at random from an analytical batch, the sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The Laboratory Control Sample (LCS) and the Method Blank (MB) are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

Any other exceptions associated with this report will be footnoted in the analytical result page(s) or the quality control summary page(s).

Please do not hesitate to contact us if you have any questions or comments pertaining to this data report. Please reference the above Certificate of Analysis Number.

This report shall not be reproduced except in full, without the written approval of the laboratory. The reported results are only representative of the samples submitted for testing.

SPL, Inc. is pleased to be of service to you. We anticipate working with you in fulfilling all your current and future analytical needs.

Matrix spike (MS) and matrix spike duplicate (MSD) samples are chosen and tested at random from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. Since the MS and MSD are chosen at random from an analytical batch, the sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The Laboratory Control Sample (LCS) and the Method Blank (MB) are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

Any other exceptions associated with this report will be footnoted in the analytical result page(s) or the quality control summary page(s).

Please do not hesitate to contact us if you have any questions or comments pertaining to this data report. Please reference the above Certificate of Analysis Number.

This report shall not be reproduced except in full, without the written approval of the laboratory. The reported results are only representative of the samples submitted for testing.

SPL, Inc. is pleased to be of service to you. We anticipate working with you in fulfilling all your current and future analytical needs.

D - Recovery Unreportable due to Dilution
* - Recovery Outside Advisable QC Limits
N/C - Not Calculated - Sample concentration is greater than 4 times the amount of spike added. Control limits do not apply.

The percent recoveries for QC samples are correct as reported. Due to significant figures and rounding, the reported RPD may differ from the displayed RPD values but is correct as reported.

Matrix spike (MS) and matrix spike duplicate (MSD) samples are chosen and tested at random from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. Since the MS and MSD are chosen at random from an analytical batch, the sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The Laboratory Control Sample (LCS) and the Method Blank (MB) are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

Any other exceptions associated with this report will be footnoted in the analytical result page(s) or the quality control summary page(s).

Please do not hesitate to contact us if you have any questions or comments pertaining to this data report. Please reference the above Certificate of Analysis Number.

This report shall not be reproduced except in full, without the written approval of the laboratory. The reported results are only representative of the samples submitted for testing.

SPL, Inc. is pleased to be of service to you. We anticipate working with you in fulfilling all your current and future analytical needs.

Matrix spike (MS) and matrix spike duplicate (MSD) samples are chosen and tested at random from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. Since the MS and MSD are chosen at random from an analytical batch, the sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The Laboratory Control Sample (LCS) and the Method Blank (MB) are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

Any other exceptions associated with this report will be footnoted in the analytical result page(s) or the quality control summary page(s).

Please do not hesitate to contact us if you have any questions or comments pertaining to this data report. Please reference the above Certificate of Analysis Number.

This report shall not be reproduced except in full, without the written approval of the laboratory. The reported results are only representative of the samples submitted for testing.

SPL, Inc. is pleased to be of service to you. We anticipate working with you in fulfilling all your current and future analytical needs.

Sample Receipt Checklist

Workorder:	**03110217**	Received By:	**NB**
Date and Time Received:	**11/7/03 9:30:00 AM**	Carrier name:	**SPL**
Temperature:	**3.2°C**	Chilled by:	**Water Ice**

1.	**Shipping container/cooler in good condition?**	Yes ☑	No ☐	Not Present	☐
2.	**Custody seals intact *on shippping container/cooler?***	Yes ☑	No ☐	Not Present	☐
3.	**Custody seals intact on sample bottles?**	Yes ☐	No ☐	Not Present	☑
4.	**Chain of custody present?**	Yes ☑	No ☐		
5.	**Chain of custody signed when relinquished and receiv**	Yes ☑	No ☐		
6.	**Chain of custody agrees with sample labels?**	Yes ☑	No ☐		
7.	**Samples in proper container/bottle?**	Yes ☑	No ☐		
8.	**Sample containers intact?**	Yes ☑	No ☐		
9.	**Sufficient sample volume for indicated test?**	Yes ☑	No ☐		
10.	**All samples received within holding time?**	Yes ☑	No ☐		
11.	**Container/Temp Blank temperature in compliance?**	Yes ☑	No ☐		
12.	**Water - VOA vials have zero headspace**	Yes ☐	No ☐	Not Applicable	☑
13.	**Water - pH acceptable upon receipt?**	Yes ☐	No ☐	Not Applicable	☑

Matrix spike (MS) and matrix spike duplicate (MSD) samples are chosen and tested at random from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. Since the MS and MSD are chosen at random from an analytical batch, the sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The Laboratory Control Sample (LCS) and the Method Blank (MB) are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

Any other exceptions associated with this report will be footnoted in the analytical result page(s) or the quality control summary page(s).

Please do not hesitate to contact us if you have any questions or comments pertaining to this data report. Please reference the above Certificate of Analysis Number.

This report shall not be reproduced except in full, without the written approval of the laboratory. The reported results are only representative of the samples submitted for testing.

SPL, Inc. is pleased to be of service to you. We anticipate working with you in fulfilling all your current and future analytical needs.

Matrix spike (MS) and matrix spike duplicate (MSD) samples are chosen and tested at random from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. Since the MS and MSD are chosen at random from an analytical batch, the sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The Laboratory Control Sample (LCS) and the Method Blank (MB) are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

Any other exceptions associated with this report will be footnoted in the analytical result page(s) or the quality control summary page(s).

Please do not hesitate to contact us if you have any questions or comments pertaining to this data report. Please reference the above Certificate of Analysis Number.

This report shall not be reproduced except in full, without the written approval of the laboratory. The reported results are only representative of the samples submitted for testing.

SPL, Inc. is pleased to be of service to you. We anticipate working with you in fulfilling all your current and future analytical needs.

Analyte	Sample Result	MS Spike Added	MS Result	MS % Recovery	MSD Spike Added	MSD Result	MSD % Recovery	RPD	RPD Limit	Low Limit	High Limit
Gasoline Range Organics	0.184	0.9	1.16	108	0.9	1.06	97.5	8.68	50	26	147

Qualifiers:
ND/U - Not Detected at the Reporting Limit
B - Analyte detected in the associated Method Blank
J - Estimated value between MDL and PQL
MI - Matrix Interference
D - Recovery Unreportable due to Dilution
* - Recovery Outside Advisable QC Limits
N/C - Not Calculated - Sample concentration is greater than 4 times the amount of spike added. Control limits do not apply.

The percent recoveries for QC samples are correct as reported. Due to significant figures and rounding, the reported RPD may differ from the displayed RPD values but is correct as reported.

Matrix spike (MS) and matrix spike duplicate (MSD) samples are chosen and tested at random from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. Since the MS and MSD are chosen at random from an analytical batch, the sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The Laboratory Control Sample (LCS) and the Method Blank (MB) are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

Any other exceptions associated with this report will be footnoted in the analytical result page(s) or the quality control summary page(s).

Please do not hesitate to contact us if you have any questions or comments pertaining to this data report. Please reference the above Certificate of Analysis Number.

This report shall not be reproduced except in full, without the written approval of the laboratory. The reported results are only representative of the samples submitted for testing.

SPL, Inc. is pleased to be of service to you. We anticipate working with you in fulfilling all your current and future analytical needs.

Qualifiers:
ND/U - Not Detected at the Reporting Limit
B - Analyte detected in the associated Method Blank
J - Estimated value between MDL and PQL
N/C - Not Calculated - Sample concentration is greater than 4 times the amount of spike added. Control limits do not apply.
MI - Matrix Interference
D - Recovery Unreportable due to Dilution
* - Recovery Outside Advisable QC Limits

The percent recoveries for QC samples are correct as reported. Due to significant figures and rounding, the reported RPD may differ from the displayed RPD values but is correct as reported.

WASTE DESCRIPTION Crude oil impacted soils WASTE QTY. 4,000

TRUCKING COMPANY _____

EXEMPT WASTE _____

As a condition of acceptance for disposal, I hereby certify that this waste is an exempt waste as defined by the EPA(Environmental Protection Agency). Waste is generated from oil and gas exploration and production operations; exempt from RCRA(Resource Conservation and Recovery Act, Subtitle C regulations. I do certify that hazardous or listed waste pursuant to EPA provisions has not been added or mixed with the waste, nor mixed with any non-exempt material.

NON-EXEMPT WASTE X

As a condition of acceptance for disposal, I hereby certify that this waste is a non-exempt waste as defined by the EPA's (Environmental Protection Agency) July 1988 Regulatory determination. To my knowledge, this waste will be analyzed pursuant to the provisions of 40 CFR Part 261 to verify the nature as non-hazardous. I further certify that to my knowledge "hazardous or listed waste" pursuant to the provisions of 40 CFR, Part 261, Subparts C and D, has not been added or mixed with the waste so as to make the resultant mixture a "hazardous waste" pursuant to the provisions of 40 CFR, Section 2613.

I certify that this waste has been surveyed for Naturally Occurring Radioactive Material(NORM) and NORM concentrations do not exceed that listed in 20 NMAC 3.1 Subpart 1402. C and D.

REQUEST FOR APPROVAL TO ACCEPT SOLID WASTE

1. RCRA Exempt: ☐ Non-Exempt: ☒ Verbal Approval Received: Yes ☐ No ☐	4. Generator ExxonMobil Corporation 5. Originating Site Eagle SW Jal, NM
2. Management Facility Destination J & L Landfarm Inc.	6. Transporter
3. Address of Facility Operator P.O. Box 356 Hobbs, NM 88241	8. State NM
7. Location of Material (Street Address or ULSTR) SW1/4, SEC 25, T25-S, R-36-E	

9. Circle One:

A. All requests for approval to accept oilfield exempt wastes will be accompanied by a certification of waste from the Generator; one certificate per job.

(B.) All requests for approval to accept non-exempt wastes must be accompanied by necessary chemical analysis to PROVE the material is not-hazardous and the Generator's certification of origin. No waste classified hazardous by listing or testing will be approved Attached

All transporters must certify the wastes delivered are only those consigned for transport.

BRIEF DESCRIPTION OF MATERIAL: Crude oil impacted soils associated with a former ExxonMobil Pipeline Company predecessor company, Humble Pipeline Company, pump station that was dismantled around 1946. Site is located approximately 2 miles SW of Jal, NM. Soil assessment results indicate approximately 4,000 cubic yards of soil may have been impacted. Excavation of the soil will generate the waste

Estimated Volume 4,000 cy Known Volume (to be entered by the operator at the end of the haul) _____ cy

QUESTIONS

Action 543618

QUESTIONS

Operator: XTO ENERGY, INC 6401 Holiday Hill Road Midland, TX 79707	OGRID: 5380
	Action Number: 543618
	Action Type: [C-141] Reclamation Report C-141 (C-141-v-Reclamation)

QUESTIONS

Prerequisites	
Incident ID (n#)	**nAPM2406048995**
Incident Name	**NAPM2406048995 EXXONMOBIL JAY ANTHONY SITE @ FLWP0514031572**
Incident Type	**Oil Release**
Incident Status	**Reclamation Report Received**
Incident Facility	**[fLWP0514031572] ExxonMobil Jay Anthony Site**

Location of Release Source	
Please answer all the questions in this group.	
Site Name	EXXONMOBIL JAY ANTHONY SITE
Date Release Discovered	01/01/2002
Surface Owner	Private

Incident Details	
Please answer all the questions in this group.	
Incident Type	Oil Release
Did this release result in a fire or is the result of a fire	No
Did this release result in any injuries	No
Has this release reached or does it have a reasonable probability of reaching a watercourse	No
Has this release endangered or does it have a reasonable probability of endangering public health	No
Has this release substantially damaged or will it substantially damage property or the environment	No
Is this release of a volume that is or may with reasonable probability be detrimental to fresh water	No

Nature and Volume of Release	
Material(s) released, please answer all that apply below. Any calculations or specific justifications for the volumes provided should be attached to the follow-up C-141 submission.	
Crude Oil Released (bbls) Details	*Not answered.*
Produced Water Released (bbls) Details	*Not answered.*
Is the concentration of chloride in the produced water >10,000 mg/l	*Not answered.*
Condensate Released (bbls) Details	*Not answered.*
Natural Gas Vented (Mcf) Details	*Not answered.*
Natural Gas Flared (Mcf) Details	*Not answered.*
Other Released Details	Cause: Normal Operations | Other (Specify) | Crude Oil | Released: 0 BBL (Unknown Released Amount) | Recovered: 0 BBL | Lost: 0 BBL.
Are there additional details for the questions above (i.e. any answer containing Other, Specify, Unknown, and/or Fire, or any negative lost amounts)	In 2002, Mr. Anthony requested that ExxonMobil Pipeline Company perform restoration activities at the site consisting of removal of hydrocarbon affected surface/subsurface soils, and concrete foundations/slabs associated with operation of the former Humble Pipeline Company storage facility. Additionally, Mr. Anthony requested that the excavated soils be transported off his property, the resulting excavation backfilled with clean soils and the construction affected area restored with native grass cover.

QUESTIONS (continued)

Operator: XTO ENERGY, INC 6401 Holiday Hill Road Midland, TX 79707	OGRID: 5380
	Action Number: 543618
	Action Type: [C-141] Reclamation Report C-141 (C-141-v-Reclamation)

QUESTIONS

Nature and Volume of Release (continued)	
Is this a gas only submission (i.e. only significant Mcf values reported)	**No, according to supplied volumes this does not appear to be a "gas only" report.**
Was this a major release as defined by Subsection A of 19.15.29.7 NMAC	**Yes**
Reasons why this would be considered a submission for a notification of a major release	**From paragraph A. "Major release" determine using:** **(1) an unauthorized release of a volume, excluding gases, of 25 barrels or more.**

With the implementation of the 19.15.27 NMAC (05/25/2021), venting and/or flaring of natural gas (i.e. gas only) are to be submitted on the C-129 form.

Initial Response	
The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury.	
The source of the release has been stopped	True
The impacted area has been secured to protect human health and the environment	True
Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices	True
All free liquids and recoverable materials have been removed and managed appropriately	True
If all the actions described above have not been undertaken, explain why	*Not answered.*

Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see Subparagraph (a) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

I hereby agree and sign off to the above statement	Name: Richard Kotzur Title: Senior Project Manager Email: NMEnvNotifications@exxonmobil.com Date: 01/15/2026

QUESTIONS (continued)

Operator: XTO ENERGY, INC 6401 Holiday Hill Road Midland, TX 79707	OGRID: 5380
	Action Number: 543618
	Action Type: [C-141] Reclamation Report C-141 (C-141-v-Reclamation)

QUESTIONS

Site Characterization	
Please answer all the questions in this group (only required when seeking remediation plan approval and beyond). This information must be provided to the appropriate district office no later than 90 days after the release discovery date.	
What is the shallowest depth to groundwater beneath the area affected by the release in feet below ground surface (ft bgs)	Between 100 and 500 (ft.)
What method was used to determine the depth to ground water	NM OSE iWaters Database Search
Did this release impact groundwater or surface water	No
What is the minimum distance, between the closest lateral extents of the release and the following surface areas:	
A continuously flowing watercourse or any other significant watercourse	Between 1 and 5 (mi.)
Any lakebed, sinkhole, or playa lake (measured from the ordinary high-water mark)	Between 1 and 5 (mi.)
An occupied permanent residence, school, hospital, institution, or church	Between 1 and 5 (mi.)
A spring or a private domestic fresh water well used by less than five households for domestic or stock watering purposes	Between 1 and 100 (ft.)
Any other fresh water well or spring	Between 1 and 5 (mi.)
Incorporated municipal boundaries or a defined municipal fresh water well field	Between 1 and 5 (mi.)
A wetland	Between 1 and 5 (mi.)
A subsurface mine	Greater than 5 (mi.)
An (non-karst) unstable area	Greater than 5 (mi.)
Categorize the risk of this well / site being in a karst geology	Low
A 100-year floodplain	Between 1 and 5 (mi.)
Did the release impact areas not on an exploration, development, production, or storage site	No

Remediation Plan	
Please answer all the questions that apply or are indicated. This information must be provided to the appropriate district office no later than 90 days after the release discovery date.	
Requesting a remediation plan approval with this submission	Yes
Attach a comprehensive report demonstrating the lateral and vertical extents of soil contamination associated with the release have been determined, pursuant to 19.15.29.11 NMAC and 19.15.29.13 NMAC.	
Have the lateral and vertical extents of contamination been fully delineated	Yes
Was this release entirely contained within a lined containment area	No
Soil Contamination Sampling: (Provide the highest observable value for each, in milligrams per kilograms.)	
Chloride (EPA 300.0 or SM4500 Cl B)	0
TPH (GRO+DRO+MRO) (EPA SW-846 Method 8015M)	67
GRO+DRO (EPA SW-846 Method 8015M)	67
BTEX (EPA SW-846 Method 8021B or 8260B)	0.2
Benzene (EPA SW-846 Method 8021B or 8260B)	0
Per Subsection B of 19.15.29.11 NMAC unless the site characterization report includes completed efforts at remediation, the report must include a proposed remediation plan in accordance with 19.15.29.12 NMAC, which includes the anticipated timelines for beginning and completing the remediation.	
On what estimated date will the remediation commence	10/21/2003
On what date will (or did) the final sampling or liner inspection occur	12/05/2003
On what date will (or was) the remediation complete(d)	12/12/2003
What is the estimated surface area (in square feet) that will be reclaimed	52272
What is the estimated volume (in cubic yards) that will be reclaimed	9765
What is the estimated surface area (in square feet) that will be remediated	52272
What is the estimated volume (in cubic yards) that will be remediated	9765
These estimated dates and measurements are recognized to be the best guess or calculation at the time of submission and may (be) change(d) over time as more remediation efforts are completed.	
The OCD recognizes that proposed remediation measures may have to be minimally adjusted in accordance with the physical realities encountered during remediation. If the responsible party has any need to significantly deviate from the remediation plan proposed, then it should consult with the division to determine if another remediation plan submission is required.

QUESTIONS (continued)

Operator: XTO ENERGY, INC 6401 Holiday Hill Road Midland, TX 79707	OGRID: 5380
	Action Number: 543618
	Action Type: [C-141] Reclamation Report C-141 (C-141-v-Reclamation)

QUESTIONS

Remediation Plan (continued)	
Please answer all the questions that apply or are indicated. This information must be provided to the appropriate district office no later than 90 days after the release discovery date.	
This remediation will (or is expected to) utilize the following processes to remediate / reduce contaminants:	
(Select all answers below that apply.)	
(Ex Situ) Excavation and **off-site** disposal (i.e. dig and haul, hydrovac, etc.)	Yes
Which OCD approved facility will be used for **off-site** disposal	fEEM0112339187 J&L LANDFARM
OR which OCD approved well (API) will be used for **off-site** disposal	*Not answered.*
OR is the **off-site** disposal site, to be used, out-of-state	*Not answered.*
OR is the **off-site** disposal site, to be used, an NMED facility	*Not answered.*
(Ex Situ) Excavation and **on-site** remediation (i.e. On-Site Land Farms)	*Not answered.*
(In Situ) Soil Vapor Extraction	*Not answered.*
(In Situ) Chemical processing (i.e. Soil Shredding, Potassium Permanganate, etc.)	*Not answered.*
(In Situ) Biological processing (i.e. Microbes / Fertilizer, etc.)	*Not answered.*
(In Situ) Physical processing (i.e. Soil Washing, Gypsum, Disking, etc.)	*Not answered.*
Ground Water Abatement pursuant to 19.15.30 NMAC	*Not answered.*
OTHER (Non-listed remedial process)	*Not answered.*
Per Subsection B of 19.15.29.11 NMAC unless the site characterization report includes completed efforts at remediation, the report must include a proposed remediation plan in accordance with 19.15.29.12 NMAC, which includes the anticipated timelines for beginning and completing the remediation.	
I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.	
I hereby agree and sign off to the above statement	Name: Richard Kotzur Title: Senior Project Manager Email: NMEnvNotifications@exxonmobil.com Date: 01/15/2026

Operator: XTO ENERGY, INC 6401 Holiday Hill Road Midland, TX 79707	OGRID: 5380
	Action Number: 543618
	Action Type: [C-141] Reclamation Report C-141 (C-141-v-Reclamation)

QUESTIONS

Sampling Event Information	
Last sampling notification (C-141N) recorded	**543653**
Sampling date pursuant to Subparagraph (a) of Paragraph (1) of Subsection D of 19.15.29.12 NMAC	**11/10/2003**
What was the (estimated) number of samples that were to be gathered	**3**
What was the sampling surface area in square feet	**100**

Remediation Closure Request	
Only answer the questions in this group if seeking remediation closure for this release because all remediation steps have been completed.	
Requesting a remediation closure approval with this submission	Yes
Have the lateral and vertical extents of contamination been fully delineated	**Yes**
Was this release entirely contained within a lined containment area	**No**
All areas reasonably needed for production or subsequent drilling operations have been stabilized, returned to the sites existing grade, and have a soil cover that prevents ponding of water, minimizing dust and erosion	Yes
What was the total surface area (in square feet) remediated	52272
What was the total volume (cubic yards) remediated	9765
All areas not reasonably needed for production or subsequent drilling operations have been reclaimed to contain a minimum of four feet of non-waste contain earthen material with concentrations less than 600 mg/kg chlorides, 100 mg/kg TPH, 50 mg/kg BTEX, and 10 mg/kg Benzene	Yes
What was the total surface area (in square feet) reclaimed	52272
What was the total volume (in cubic yards) reclaimed	9765
Summarize any additional remediation activities not included by answers (above)	see report

The responsible party must attach information demonstrating they have complied with all applicable closure requirements and any conditions or directives of the OCD. This demonstration should be in the form of a comprehensive report (in .pdf format) including a scaled site map, sampling diagrams, relevant field notes, photographs of any excavation prior to backfilling, laboratory data including chain of custody documents of final sampling, and a narrative of the remedial activities. Refer to 19.15.29.12 NMAC.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations. The responsible party acknowledges they must substantially restore, reclaim, and re-vegetate the impacted surface area to the conditions that existed prior to the release or their final land use in accordance with 19.15.29.13 NMAC including notification to the OCD when reclamation and re-vegetation are complete.

I hereby agree and sign off to the above statement	Name: Richard Kotzur Title: Senior Project Manager Email: NMEnvNotifications@exxonmobil.com Date: 01/15/2026

QUESTIONS (continued)

Operator: XTO ENERGY, INC 6401 Holiday Hill Road Midland, TX 79707	OGRID: 5380
	Action Number: 543618
	Action Type: [C-141] Reclamation Report C-141 (C-141-v-Reclamation)

QUESTIONS

Reclamation Report	
Only answer the questions in this group if all reclamation steps have been completed.	
Requesting a reclamation approval with this submission	Yes
What was the total reclamation surface area (in square feet) for this site	52272
What was the total volume of replacement material (in cubic yards) for this site	10192
Per Paragraph (1) of Subsection D of 19.15.29.13 NMAC the reclamation must contain a minimum of four feet of non-waste containing, uncontaminated, earthen material with chloride concentrations less than 600 mg/kg as analyzed by EPA Method 300.0, or other test methods approved by the division. The soil cover must include a top layer, which is either the background thickness of topsoil or one foot of suitable material to establish vegetation at the site, whichever is greater.	
Is the soil top layer complete and is it suitable material to establish vegetation	Yes
On what (estimated) date will (or was) the reseeding commence(d)	12/12/2003
Summarize any additional reclamation activities not included by answers (above)	The Site was re-seeded and covered with 312,340 pounds of cotton compost under the direction and satisfaction of the landowner, Mr. Jay Anthony.
The responsible party must attach information demonstrating they have complied with all applicable reclamation requirements and any conditions or directives of the OCD. This demonstration should be in the form of attachments (in .pdf format) including a scaled site map, any proposed reseeding plans or relevant field notes, photographs of reclaimed area, and a narrative of the reclamation activities. Refer to 19.15.29.13 NMAC.	
I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. QUESTIONS

Revegetation Report	
Only answer the questions in this group if all surface restoration, reclamation and re-vegetation obligations have been satisfied.	
Requesting a restoration complete approval with this submission	No
Per Paragraph (4) of Subsection (D) of 19.15.29.13 NMAC for any major or minor release containing liquids, the responsible party must notify the division when reclamation and re-vegetation are complete.
