Incident Number: nAPP2530941949
Eddy County, New Mexico**

To Whom it May Concern:

Ensolum, LLC (Ensolum), on behalf of Devon Energy Production Company, LP (Devon), has prepared this *Closure Request* to document excavation and soil sampling activities performed to address a produced water release that occurred at the Helios 6 Fed 2H Battery (Site) facility located at 32.68309574°, -103.9066347°. Based on the excavation activities completed and soil sample analytical results, Devon is submitting this *Closure Request*, describing remediation that has occurred and requesting closure for Incident Number nAPP2530941949.

SITE DESCRIPTION AND RELEASE SUMMARY

The Site is located in Unit O, Section 06, Township 19 South, Range 31 East, in Eddy County, New Mexico and is associated with oil and gas exploration and production operations on Federal Land managed by the Bureau of Land Management (BLM).

On November 5, 2025, a fire tube developed a hole, which resulted in the release of approximately 70 barrels (bbls) of produced water and 3 bbls of crude oil onto the caliche pad. A vacuum truck was dispatched to the Site to recover free-standing fluid, and approximately 38 bbls of produced water and 2 bbls of crude oil were recovered. Devon reported the release to the New Mexico Oil Conservation Division (NMOCD) via Notification of Release (NOR) on November 5, 2025, and submitted a Release Notification Form C-141 (Form C-141) on November 18, 2025. The release was assigned Incident Number nAPP2530941949. The Form C-141 can be referenced on the NMOCD Portal.

SITE CHARACTERIZATION AND CLOSURE CRITERIA

The Site was characterized to assess the applicability of Table I, Closure Criteria for Soils Impacted by a Release, of Title 19, Chapter 15, Part 29, Section 12 (19.15.29.12) of the New Mexico Administrative Code (NMAC) Site Assessment/Characterization.

Depth to groundwater at the Site is estimated to be greater than 105 feet below ground surface (bgs) based on a soil boring completed by H&R Enterprises, LLC on August 26, 2025. Soil boring CP-2080 POD1 is located approximately 0.26 miles north of the Site and was drilled to a total depth of 105 feet bgs, with no groundwater encountered. There are no regional or Site-specific hydrogeological conditions, such as shallow surface water, known karst features, wetlands, or vegetation to suggest the

Closure Request
Helios 6 Fed 2H Battery

Site is conducive to shallower groundwater. The location of the boring is presented on Figure 1, and the Well Record and Log is included in Appendix A.

The closest continuously flowing or significant watercourse to the Site is an intermittent dry wash, located approximately 1,110 feet east of the Site. The Site is greater than 200 feet from a lakebed, sinkhole, or playa lake and greater than 300 feet from an occupied residence, school, hospital, institution, church, or wetland. The Site is greater than 1,000 feet to a freshwater well or spring and is not within a 100-year floodplain or overlying a subsurface mine. The Site is underlain by stable geology (low potential karst designation area). Site receptors are identified on Figure 1.

Based on the results of the Site Characterization, the following NMOCD Table I Closure Criteria (Closure Criteria) apply:

- Benzene: 10 milligrams per kilogram (mg/kg)
- Benzene, toluene, ethylbenzene, and total xylenes (BTEX): 50 mg/kg
- Total petroleum hydrocarbons (TPH)-gasoline range organics (GRO) and TPH-diesel range organics (DRO): 1,000 mg/kg
- TPH: 2,500 mg/kg
- Chloride: 20,000 mg/kg

A reclamation requirement of 600 mg/kg chloride and 100 mg/kg TPH was applied to the top 4 feet of the pasture area that was impacted by the release, per 19.15.29.13.D (1) NMAC for the top 4 feet of areas that will be reclaimed following remediation.

SITE ASSESSMENT ACTIVITIES

On November 6, 2025, Ensolum personnel visited the Site to evaluate the release extent for Incident Number nAPP2530941949 based on information provided on the Form C-141 and visual observations. The release extent was mapped utilizing a handheld Global Positioning System (GPS) unit and is depicted on Figure 2.

DELINEATION ACTIVITIES

On November 10, 11, and 19, 2025, Ensolum personnel were onsite to conduct lateral and vertical delineation soil sampling activities. Twenty-five delineation soil samples (SS01 through SS25) were collected from around the release extent at ground surface and 1-foot bgs to assess the lateral extent of the release. Five boreholes (BH01 through BH05) were advanced via hand auger within the release extent to assess the vertical extent of the release. The boreholes were advanced to depths ranging from ground surface to 2 feet bgs. Discrete delineation soil samples were collected from each borehole and field screened for chloride and TPH utilizing Hach[®] chloride QuanTab[®] test strips and PetroFLAG[®], respectively. Field screening results and observations for the boreholes were logged on lithologic soil sampling logs, which are included in Appendix B. The delineation soil sample locations are depicted on Figure 2.

The delineation soil samples were placed directly into pre-cleaned glass jars, labeled with the location, date, time, sampler name, method of analysis, and immediately placed on ice and transported under strict chain-of-custody procedures to Envirotech Analysis Laboratory (Envirotech) in Farmington, New Mexico, for analysis of the following chemicals of concern (COCs): BTEX following United States

Environmental Protection Agency (EPA) Method 8021B; TPH-GRO, TPH-DRO, and TPH-oil range organics (ORO) following EPA Method 8015M/D; and chloride following EPA Method 300.0.

EXCAVATION AND CONFIRMATION SOIL SAMPLING ACTIVITIES

Between January 12 and February 6, 2026, Ensolum personnel oversaw the excavation of waste-containing soil from the release area along the eastern and southern sides of the tank battery containment and production equipment area. Excavation activities were performed utilizing a backhoe to depths ranging from 0.5 feet to 5 feet bgs. To direct excavation activities, soil was field screened for chloride and TPH as previously described above. Photographic documentation is included in Appendix C.

Due to the size of the release and anticipated excavation extent, a confirmation soil sampling variance for frequency of composite soil sampling area was requested on December 10, 2025, and approved by the NMOCD on December 30, 2025. Following removal of impacted soil, 5-point composite soil samples were collected every 400 square feet from the floor of the excavation and 200 square feet from the sidewall of the excavation. The 5-point composite soil samples were collected by placing five equivalent aliquots of soil in a resealable plastic bag and homogenizing the samples by thoroughly mixing. Composite soil samples FS01 through FS52 were collected from the floor of the excavation and sidewall soil samples SW01 through SW07 were collected from the outside walls of the excavation at depths ranging from the ground surface to 5 feet bgs. The soil samples were handled, submitted to Envirotech, and analyzed for the same COCs as described above. The excavation extent and excavation soil sample locations were mapped utilizing a handheld GPS unit and are depicted on Figure 3.

The final excavation extent measured approximately 20,511 square feet. A total of approximately 1,316 cubic yards of soil were removed during excavation activities. The waste-containing soil was transported and properly disposed of at the Lea Land LLC disposal facility. Subsequent to receipt of confirmation laboratory analytical results, the excavation was backfilled with clean fill material and recontoured to match pre-existing conditions.

LABORATORY ANALYTICAL RESULTS

Laboratory analytical results for lateral delineation soil samples (SS01 through SS25) collected at ground surface and 1-foot bgs indicated all COC concentrations were compliant with the strictest Closure Criteria, successfully defining the lateral extent of the release.

Laboratory analytical results for BH02 through BH05, collected at ground surface, indicated BTEX and/or TPH concentrations exceeded Closure Criteria, but those samples were removed through excavation activities. All other analytical results for soil samples collected from boreholes BH01 through BH05 indicated all COC concentrations were compliant with Site Closure Criteria.

Laboratory analytical results for all confirmation floor and sidewall soil samples collected from the final excavation extent indicated COC concentrations were below Closure Criteria. Laboratory analytical results are summarized in Table 1, Table 2, and Table 3, and the complete laboratory analytical reports are included as Appendix D.

RECLAMATION PLAN

A portion of the release occurred off pad in the pasture, and as such, a reclamation requirement of 600 mg/kg chloride and 100 mg/kg TPH were applied to the top 4 feet of the subsurface that was

Devon Energy Production Company, LP
Closure Request

impacted by the release per 19.15.29.13.D (1) NMAC for the top 4 feet of areas that will be reclaimed following remediation. The following Reclamation Plan proposes reclamation of the excavated area:

- The excavation will be backfilled with locally sourced topsoil and recontoured to match existing grade;
- Soil in the vicinity of the release includes: Simona gravelly fine sandy loam, gravelly fine sandy loam, 0 to 19 inches and indurated, 19 to 23 inches according to the United States Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS) Web Soil Survey completed on September 17, 2025;
- The backfilled areas will be seeded utilizing a weed-free seed mix designed by the BLM to meet reclamation standards for this region, which will be: BLM Seed Mixture #1, for Loamy Sites;
- The seed mixture will be distributed with either a push broadcaster seed spreader, tractor operated broadcast seed spreader, drill seeding, or other means;
- Application of the seed mixture will be at a coverage of 10 pounds of seeds per acre of reclaimed pasture with distribution by a drilling method or 20 pounds of seeds per acre of reclaimed pasture with distribution by a broadcast method;
- Erosion control management is not anticipated, but if needed, will potentially include:
 - The placement of waddles in areas with a propensity for high run off rates;
 - Straw cover if high winds are anticipated to support moisture retention and limit wind from blowing seeds away before they have had time to germinate; and/or
 - Other erosional control best management practices (BMP) as necessary to support timely and healthy regrowth of vegetation in disturbed areas;
- Seeding is anticipated to be completed in the Spring when temperatures and precipitation is most conducive for vegetation growth. In general, seeding should occur approximately one month after the last frost in the Spring up until approximately one month prior to the first fall frost. Ensolum understands the optimal time to seed is between July and early September, which will be adhered to for this Site;
- Bi-annual inspections (at a minimum) will take place on the location until revegetation is consistent with local natural vegetation density. The Site will be inspected the following Fall to assess the success of regrowth. If necessary, an additional application of the BLM-approved pure live seed mixture will be applied as well as any needed BMPs will be installed to support growth and limit erosion;
- Upon completion of revegetation, a copy of the C-103 submitted to NMOCD will also be submitted to BLM for final inspection and release.

CLOSURE REQUEST

Site assessment and excavation activities were conducted at the Site to address the November 5, 2025, produced water release. Following remediation efforts, 52 composite confirmation floor soil samples (FS01 through FS52) and seven composite confirmation sidewall samples (SW01 through SW07) were collected. Laboratory analytical results for the excavation soil samples collected from the final excavation extent indicated all COC concentrations were in compliance with Site Closure Criteria and/or with the reclamation requirements where applicable. Based on the soil sample analytical results, no further remediation was required. Reclamation will be completed as described above.

Closure Request
Helios 6 Fed 2H Battery

Based on horizontal and vertical delineation soil sampling results, confirmation soil sample laboratory analytical results in compliance with their respective Closure Criteria and reclamation requirements, depth to groundwater greater than 105 feet bgs and no nearby site receptors at the Site, Devon believes these remedial actions have been protective of human health, the environment, and groundwater. As such, Devon respectfully requests closure for Incident Numbers nAPP2530941949.

Cole,

Please be advised that the request for larger square footage for final/confirmation 5-point composite samples is not a variance request. Pursuant to 19.15.29.12 D. (1)(b) NMAC, operators may request alternative sampling plans. Without an approved alternative sampling plan, the operator must collect final/confirmation 5-point composite samples where each composite sample is not representative of more than 200 square feet.

In future requests, please submit these types of requests as alternative sampling plans and not variance requests. Although, variance requests can be submitted with alternative sampling plans.

Variance requests should only be submitted for requests that fall outside of requirements of 19.15.29 NMAC. One example of a variance request would be deviating away from the requirements of 19.15.29.12 D. (1) NMAC.

If other applicable regulatory Agencies (BLM, SLO, Tribal etc.) impose additional requirements, it is the Operators responsibility to meet all applicable requirements as OCD approval does not relieve the Operator of any regulatory requirements imposed by other agencies.

Your request for an alternative sampling plan is approved with the following conditions: floor confirmation samples may be collected at a frequency of no more than 400 ft², while all sidewall samples will be required to be collected no more than every 200 ft².

CAUTION: This email originated outside of our organization. Exercise caution prior to clicking on links or opening attachments.

Hello,

Devon Energy Production Company, LP (Devon) is requesting a confirmation sampling variance at the Helios 6 Fed 2H Battery (Site). On November 05, 2025, a hole in a heater treater fire tube resulted in the release of approximately 70 barrels (bbls) of produced water and 3 bbls of crude oil; 38 bbls of produced water and 2 bbls of crude oil were recovered. Devon reported the release to the New Mexico Oil Conservation Division (NMOCD) on November 05, 2025, and subsequently the release was assigned Incident Number nAPP2530941949. The release impacted an area on-pad approximately 12,124 square feet in size and an off-pad area approximately 468 square feet in size on Federal Land managed by the Bureau of Land Management (BLM). According to the New Mexico Office of the State Engineer (NMOSE), the closest water well with available depth to groundwater data is soil boring (CP-2080 POD1) with a reported depth to water measurement greater than 105 feet below ground surface (bgs); soil boring CP-2080 POD1 was advanced by H&R Enterprises, LLC on August 26, 2025 and is 0.26 miles northeast of the Site. A desktop review for potential site receptors has been completed, and the site is greater than 1,000 ft. to a freshwater well or spring and is not within a 100-year floodplain or overlying a subsurface mine (see Figure 1). The closest significant watercourse is an intermittent dry wash located approximately 1,110 feet east of the Site. The Site is not underlain by unstable geology (low potential karst designation area) and there are no indicators of surface or subsurface karst features observed at or around the Site. Based on the results of the desktop review and the completion of the DTW determination, the following Site Closure Criteria will apply: 10 mg/kg benzene, 50 mg/kg BTEX, 1,000 mg/kg TPH – Gasoline Range Organics (GRO) and TPH – Diesel Range Organics (DRO), 2,500 mg/kg Total TPH and 20,000 mg/kg chloride.

Lateral and vertical delineation soil sampling has been completed at the Site (see Table 1 and Figure 2). Eighteen lateral delineation soil sample locations (SS01 through SS25) were collected from around the release extent at ground surface and 1-foot bgs and all were in compliance with the strictest Closure Criteria per NMOCD Table I. Vertical delineation soil sample locations (BH01 through BH05) were in compliance with the Site Closure Criteria at depths ranging from 1-foot to 2 feet bgs (see Table 1). Devon would like to request a confirmation soil sampling variance for excavation floor samples collected every 400 sq. ft. from the floor of the excavation and every 200 sq. ft. from the sidewalls of the excavation where applicable. Excavation of the impacted area on-pad area will begin as soon as Devon selects a subcontractor. Vertical delineation and excavation of the

off-pad area will begin as soon as Devon receives an approved Sundry from the BLM. Devon will submit a final closure report as required in 19.15.29.12.B.(1) NMAC following excavation and confirmation soil sampling activities. Due to the size of the impacted area, and a regional depth to groundwater greater than 105 ft bgs, Devon believes this *variance request* will provide equal or better protection of public health, the environment. Devon respectfully requests approval for this *variance request* associated with Incident Number nAPP2530941949.

Subject: [EXTERNAL] Devon Energy Production Company, LP - Helios 6 Fed 2H Battery - Extension Request - nAPP2530941949

CAUTION: This email originated outside of our organization. Exercise caution prior to clicking on links or opening attachments.

Hello All,

Devon Energy Production Company, LP (Devon) is requesting an extension of the current deadline of February 3, 2026, for submitting a remediation work plan or closure report required in 19.15.29.12.B. (1) NMAC at the Helios 6 Fed 2H Battery (Site) (Incident Number nAPP2530941949). The release occurred on November 5, 2025, and approximately 70 barrels (bbls) of produced water and 3 bbls of crude oil were released onto the pad surface and the adjacent pasture to the south; 38 bbls of produced water and 2 bbls of crude oil were recovered. Ensolum personnel have completed lateral and vertical delineation soil sampling within and around the release extent via hand auger. Ensolum personnel collected discrete delineation soil samples from boreholes (BH01 through BH05) at depths ranging from ground surface to 2 feet below ground surface (bgs) (see Figure 2). Beginning on January 12, 2026, Ensolum personnel were onsite to oversee the excavation of impacted and waste containing soil; excavation and confirmation soil sampling activities are currently on-going. Devon intends to submit a remediation work plan or closure report upon receiving final laboratory analytical data from confirmation soil sampling activities. Devon respectfully requests a 90-day extension until May 4, 2026. Please let me know if you have any further questions regarding this site.

QUESTIONS

Nature and Volume of Release (continued)	
Is this a gas only submission (i.e. only significant Mcf values reported)	No, according to supplied volumes this does not appear to be a "gas only" report.
Was this a major release as defined by Subsection A of 19.15.29.7 NMAC	Yes
Reasons why this would be considered a submission for a notification of a major release	From paragraph A. "Major release" determine using: (1) an unauthorized release of a volume, excluding gases, of 25 barrels or more.
<i>With the implementation of the 19.15.27 NMAC (05/25/2021), venting and/or flaring of natural gas (i.e. gas only) are to be submitted on the C-129 form.</i>	

Initial Response

The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury.

The source of the release has been stopped	True
The impacted area has been secured to protect human health and the environment	True
Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices	True
All free liquids and recoverable materials have been removed and managed appropriately	True
If all the actions described above have not been undertaken, explain why	Not answered.

Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see Subparagraph (a) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

These estimated dates and measurements are recognized to be the best guess or calculation at the time of submission and may (be) change(d) over time as more remediation efforts are completed.
The OCD recognizes that proposed remediation measures may have to be minimally adjusted in accordance with the physical realities encountered during remediation. If the responsible party has any need to significantly deviate from the remediation plan proposed, then it should consult with the division to determine if another remediation plan submission is required.

If the responsible party has any need to significantly deviate from the remediation plan proposed, then it should consult with the division to determine if another remediation plan submission is required.
