<b>Remediation Summary</b> Summarize any additional remediation activities not included by answers (above).	The impacted area was contained within a lined containment; however, deficiencies in the liner resulted in localized breaches, allowing contamination to seep below the liner. Delineation efforts successfully defined the vertical and horizontal extent of the release. A hand crew was then deployed to excavate and remove the impacted soil. Following removal, a 48-hour sampling notification was submitted, and a confirmation sampling event was conducted. Once laboratory analysis verified that all contamination had been effectively removed, clean backfill was placed to restore the area to its original contours.

Pima Environmental Services, LLC (Pima) has been contracted by Spur Energy to perform a spill assessment, remediation activities, and submit this closure report for a crude oil release that occurred at the Skelly Unit 605 Tank Battery (Site). The initial release was discovered on June 28, 2025. This incident was assigned Incident ID nAPP2518131216, by the New Mexico Oil Conservation Division (NMOCD).

**Site Characterization**

The Site is located approximately 4.72 miles southwest of Maljamar, NM. This spill site is in Unit J, Section 14, Township 17S, Range 31E, Latitude 32.83410, Longitude -103.83960, Eddy County, NM. Figure 1 references a location map.

According to the New Mexico Bureau of Geology and Mineral Resources, the geological composition of the area consists of Eolian and piedmont deposits, dating from the Holocene to middle Pleistocene (refer to Appendix B). The dominant soil type within the site is classified as Kermit-Berino fine sand, 0 to 3 percent slope, as identified in the USDA Natural Resources Conservation Service soil survey (Appendix B). Drainage characteristics for the area are described as well-drained. The geological assessment further concludes that there is a low likelihood of karst features occurring in proximity to the site (see Figure 3). The closest major watercourse is a Freshwater pond, situated approximately 1.28 miles to the southwest (Appendix A).

Based on data obtained from the New Mexico Office of the State Engineer (OSE), the nearest groundwater to the site occurs at a depth greater than 101 feet below ground surface (bgs). This determination is supported by water well RA 13521 POD1, drilled on November 21, 2024, and located approximately 0.04 miles from the release area. Additional information from the United States Geological Survey (USGS) indicates that the closest groundwater monitoring well, USGS 325223103462501, is situated approximately 4.56 miles from the site and has a recorded groundwater depth of 122 feet bgs. For detailed well locations and spatial context, refer to Appendix A, which includes a comprehensive water well map depicting both OSE and USGS well locations.

**Release Information**

**nAPP2518131216:** On June 28, 2025, corrosion of a tank resulted in the release of approximately 32 barrels of crude oil into the lined containment area. Prompt response actions, including immediate containment measures and the rapid dispatch of a vacuum truck, allowed for the recovery of approximately 27 barrels of crude oil. During response and recovery activities, deficiencies in the lined containment were identified. Evidence of localized penetration through the liner and impact to the underlying soil was observed in several areas. The affected area is depicted in Figure 4.

**Site Assessment and Soil Sampling Results**

From July 14, 2025, through September 8, 2025, Pima Environmental Services mobilized personnel to the site to conduct delineation activities. Soil sampling was performed throughout the lined containment, targeting areas where liner deficiencies had been identified. A total of 18 vertical delineation samples (V1–V18) and four horizontal delineation samples (SW1–SW4) were collected outside the containment to verify that impacts remained confined within the lined containment. All samples were collected as grab samples from the surface to varying depths below ground surface (bgs). The samples were submitted for laboratory analysis to evaluate total chloride using EPA Method 300.0; benzene, toluene, ethylbenzene, and total xylenes (BTEX) using EPA Method 8021B; and motor, diesel, and gasoline range organics (MRO, DRO, and GRO) using EPA Method 8015D. A summary of the analytical results is presented in the data table, with complete laboratory reports provided in Appendix E.

**Remediation Activities**

Between January 1 and January 31, Pima Environmental Services deployed a hand-shoveling crew and a field technician to conduct remediation of the impacted area within the lined containment. Excavation depths were determined based on soil sample locations and analytical results, with soil samples V2, V3, V6, V11, V12, V16, V17, and V18 identified for remediation. Soil samples V2 and V3 were excavated to a depth of 2 feet below ground surface (bgs), while soil samples V6, V16, V17, and V18 were excavated to a depth of 1 foot bgs. The overlapping area associated with soil samples V11 and V12 was excavated to a depth of 3 feet bgs. In total, approximately 720 square feet were excavated, resulting in the removal of an estimated 80 cubic yards of contaminated soil. Specifically, the area overlapping soil samples V2 and V3 was excavated to 2 feet bgs and measured approximately 128 square feet; the area overlapping soil sample V6 was excavated to 1 foot bgs and measured approximately 61 square feet; the combined area overlapping soil samples V16, V17, and V18 was excavated to 1 foot bgs and measured approximately 300 square feet; and the area overlapping soil samples V11 and V12 was excavated to 3 feet bgs and measured approximately 231 square feet. The excavated material was securely transported to Lea Land, a New Mexico Oil Conservation Division (NMOCD)-approved disposal facility for proper disposal.

On January 20, 2026, Spur Energy proactively submitted a 48-hour sampling notification as part of the preliminary preparations leading up to the final confirmation sampling event. This precautionary step was taken with the expectation that all sampling results would fall below the closure criteria established by the New Mexico Oil Conservation Division (NMOCD). Should the results confirm compliance, the plan is to move forward with the closure process. For additional details, the 48-hour notification can be referenced in Appendix C.

On January 23, 2026, a Pima Environmental field technician performed a confirmation sampling event at the site to assess the effectiveness of the remedial excavation. A total of seven composite bottom samples (designated CS1–CS7) and ten composite sidewall samples (designated CSW1–CSW10) were collected. Each sidewall sample represented a five-point composite collected vertically along the full extent of the excavation sidewalls, from the base to the surface, ensuring comprehensive spatial representation. The sampling methodology adhered to standard industry protocols for post-excavation verification and contaminant delineation.

Soil sample CS1 was collected from an area excavated to a depth of 2 feet below ground surface (bgs), covering approximately 128 square feet. Corresponding confirmation sidewall samples, CSW1 and CSW2, were collected from the perimeter of this excavation, totaling approximately 96 square feet. Soil samples CS2 and CS3 were obtained from an excavated area measuring approximately 231 square feet, with confirmation sidewall composite samples CSW3 and CSW4 collected along the surrounding perimeter, covering approximately 250 square feet. Confirmation samples CS4 through CS6 were collected from an area excavated to a depth of 1 foot (bgs), covering approximately 300 square feet, with corresponding confirmation sidewall composite samples CSW5 through CSW8 collected from the perimeter, totaling approximately 131 square feet. Confirmation sample CS7 was collected from an area excavated to a depth of 1 foot (bgs), covering approximately 61 square feet, with corresponding confirmation sidewall composite samples CSW9 and CSW10 collected from the surrounding perimeter, covering approximately 33.4 square feet. The results of this confirmation sampling event are summarized in the following data table.

Each soil sample was a 5-point composite derived from the excavated area, specifically representing an area not exceeding 200 square feet of the open excavation. A total of seventeen (17) samples were collected for laboratory analysis for total chloride using EPA Method 300.0; benzene, toluene, ethylbenzene and total xylenes (BTEX) using EPA Method 8021B; and motor, diesel, and gasoline range organics (MRO, DRO, & GRO) by EPA Method 8015D. All samples were placed into laboratory supplied glassware, labeled, and maintained on ice until delivery to Cardinal Laboratories in Hobbs, New Mexico (Appendix C).

Upon confirmation that all soil samples met the closure standards set by the New Mexico Oil Conservation Division (NMOCD), clean backfill material was brought in and utilized to restore the excavated area, returning it to its original state.

### MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:20,000.

Warning: Soil Map may not be valid at this scale.  
 Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service  
 Web Soil Survey URL:  
 Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Eddy Area, New Mexico  
 Survey Area Data: Version 20, Sep 3, 2024

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Feb 7, 2020—May 12, 2020

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

**QUESTIONS**

<b>Nature and Volume of Release (continued)</b>	
Is this a gas only submission (i.e. only significant Mcf values reported)	<b>No, according to supplied volumes this does not appear to be a "gas only" report.</b>
Was this a major release as defined by Subsection A of 19.15.29.7 NMAC	<b>Yes</b>
Reasons why this would be considered a submission for a notification of a major release	<b>From paragraph A. "Major release" determine using: (1) an unauthorized release of a volume, excluding gases, of 25 barrels or more.</b>

*With the implementation of the 19.15.27 NMAC (05/25/2021), venting and/or flaring of natural gas (i.e. gas only) are to be submitted on the C-129 form.*

**Initial Response**

*The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury.*

The source of the release has been stopped	True
The impacted area has been secured to protect human health and the environment	True
Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices	True
All free liquids and recoverable materials have been removed and managed appropriately	True
If all the actions described above have not been undertaken, explain why	N/A

*Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see Subparagraph (a) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.*

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

**Remediation Closure Request**

*Only answer the questions in this group if seeking remediation closure for this release because all remediation steps have been completed.*

Requesting a remediation closure approval with this submission	Yes
Have the lateral and vertical extents of contamination been fully delineated	Yes
Was this release entirely contained within a lined containment area	No
All areas reasonably needed for production or subsequent drilling operations have been stabilized, returned to the sites existing grade, and have a soil cover that prevents ponding of water, minimizing dust and erosion	Yes
What was the total surface area (in square feet) remediated	720
What was the total volume (cubic yards) remediated	80
All areas not reasonably needed for production or subsequent drilling operations have been reclaimed to contain a minimum of four feet of non-waste contain earthen material with concentrations less than 600 mg/kg chlorides, 100 mg/kg TPH, 50 mg/kg BTEX, and 10 mg/kg Benzene	Yes
What was the total surface area (in square feet) reclaimed	720
What was the total volume (in cubic yards) reclaimed	80
Summarize any additional remediation activities not included by answers (above)	The impacted area was contained within a lined containment; however, deficiencies in the liner resulted in localized breaches, allowing contamination to seep below the liner. Delineation efforts successfully defined the vertical and horizontal extent of the release. A hand crew was then deployed to excavate and remove the impacted soil. Following removal, a 48-hour sampling notification was submitted, and a confirmation sampling event was conducted. Once laboratory analysis verified that all contamination had been effectively removed, clean backfill was placed to restore the area to its original contours.

*The responsible party must attach information demonstrating they have complied with all applicable closure requirements and any conditions or directives of the OCD. This demonstration should be in the form of a comprehensive report (in .pdf format) including a scaled site map, sampling diagrams, relevant field notes, photographs of any excavation prior to backfilling, laboratory data including chain of custody documents of final sampling, and a narrative of the remedial activities. Refer to 19.15.29.12 NMAC.*

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations. The responsible party acknowledges they must substantially restore, reclaim, and re-vegetate the impacted surface area to the conditions that existed prior to the release or their final land use in accordance with 19.15.29.13 NMAC including notification to the OCD when reclamation and re-vegetation are complete.

I hereby agree and sign off to the above statement	Name: Katherine Purvis Title: EHS Coordinator Email: katherine.purvis@spurenergy.com Date: 04/21/2026
