Paragon Environmental, LLC (Paragon) has been contracted by Spur Energy Partners (Spur) to perform remediation activities for the Release Site known as the NG Phillips St Battery (NG Phillips). Details of the release are summarized below:

Release Details			
Type of Release:	Produced Water	Volume of Release:	40 bbls
		Volume Recovered:	0 bbls
Source of Release:	Water Tank	Date of Release:	2/18/25
Was Immediate Notice Given?	Yes	If, Yes, to Whom?	NOR
Was a Watercourse Reached?	No	If Yes, Volume Impacting Watercourse:	N/A
Surface Owner:	State	Mineral Owner:	State
The water tank ran over due to overload tripping, which caused the release of PW into the unlined containment.			

Topographical and Wetlands Maps are provided in Figures #2 and #4.

CULTURAL RESOURCES AND BIOLOGICAL COMPLIANCE

The proposed remediation area at the site had previously been disturbed areas developed for oil and gas operations and was therefore not required. Planned remediation activities will not extend beyond the previously disturbed areas.

REGULATORY FRAMEWORK & SITE CHARACTERIZATION

Surface impacts from unauthorized releases of fluids or gases are generally regulated by the New Mexico Oil Conservation Division (NMOCD) in accordance with 19.15.29 of the New Mexico Administrative Code (NMAC). 19.15.29 NMAC establishes reporting, site assessment/characterization, remediation, closure, variance, and enforcement procedures. Table I of 19.15.29.12 NMAC determines the closure criteria for soils impacted by a release based on depth to groundwater and the following characteristics:

- Depth to Groundwater in the affected area 26-50'
- Method to determine DTW NM OSE
- Did the release impact groundwater or surface water No

Depth to groundwater information is provided in Appendix A.

What are the minimum distances between the closest lateral extents of the release and the following surface areas:

- A Continuously flowing watercourse or any other significant watercourse- > 5 Mile
- Any lakebed, sinkhole, or playa lake- 1-5 mi
- An occupied permanent residence, school, hospital, institution, or church- 1-5 mi
- A spring or a private domestic fresh water well used by less than 5 households for domestic or stock watering purposes- 1-5 mi
- Any other fresh water well or spring- 1-5 mi
- Incorporated municipal boundaries or a defined municipal fresh water well field- 1-5 mi
- A wetland- 100-200'
- A subsurface mine- >5 mi
- An (non-karst) unstable area- 1-5mi
- Categorize the risk of this well/site being in a karst area geology- Low
- A 100-year floodplain- 1-5 mi
- Did the release impact areas not on an exploration, development, production, or storage site- No

Per the New Mexico Bureau of Geology and Mineral Resources, the geology is in the Quaternary Formation, and is made up of Eolian and piedmont deposits (Holocene to middle Pleistocene)— interlayered eolian sands and piedmont-slope deposits along the eastern flank of the Pecos River valley, primarily between Roswell and Carlsbad. Typically capped by thin eolian deposits (QEP). The soil in this area is made up of stony and Rough broken land, with 0 to 3 percent slopes, according to the United States Department of Agriculture Natural Resources Conservation Service. The drainage course in this area is well-drained.

The Soil Survey and FEMA Flood Map are provided in Appendix B. A Karst Map is provided in Figure #3.

INITIAL SITE ASSESSMENT & SOIL SAMPLING EVENT

On February 27, 2025, Paragon arrived on location and conducted an initial site assessment and obtained soil samples. During the initial site assessment, three (3) soil samples were collected. Samples were collected every foot and tested until they were fully delineated in accordance with Table 1. A table summarizing the titration results from the soil samples collected during the above-stated activities is provided below:

Sample Date: 2-27-25		
Sample ID	Depth (BGS)	CHLORIDES
S-1	5'	124
S-2	9'	124
S-3	9'	124

During the review of this plan, it was determined to obtain additional samples and have them tested in a laboratory. On September 5, 2025, Paragon returned to the site and obtained additional samples, the results of this event are in the following data table:

REMEDIATION ACTIVITIES

On December 1st, 2025, Paragon mobilized personnel and equipment to perform remedial work based on our field titrations, advancing the Release Site toward an NMOCD and NMSLO-approved closure.

- The area of S-1 was excavated to a depth of 7 feet BGS. This area measured approximately 1100 s/f, and a calculated volume of 285 c/y was removed.
- The areas of S-2 and S-3 were excavated to a depth of 12 feet BGS. This area measured approximately 2700 s/f, and a calculated volume of 1200 c/y was removed.
- The excavated areas combined to a total of approximately 3800 s/f and 1485 c/y.
- Once the area was excavated to the specified depths, we obtained confirmation samples. We utilized composite sampling, where each sample was representative of no more than 200 sq/ft. The results of this event are in the following data table:

On December 16, 2025, a notification was submitted to the NMOCD, giving them 48 hours' notice that we would obtain confirmation samples on December 19, 2025.

These laboratory analytical results showed that the confirmation soil samples were below NMOCD Closure Criteria. The excavated soils were loaded into trucks and transported to Lea Land, an NMOCD-Approved waste disposal facility. After receiving laboratory analytical results below the closure criteria, the excavated areas were backfilled with "like" material from Lea Land on February 23rd, 2026. The affected area was then contoured and machine-compacted to match the surrounding grade. On February 27, 2026, a notification was submitted to the NMOCD, giving them 48 hours' notice that we would obtain a backfill sample on March 4, 2026. Please refer to the following data table to see that the backfill is within closure criteria.:

QUESTIONS

Nature and Volume of Release (continued)	
Is this a gas only submission (i.e. only significant Mcf values reported)	No, according to supplied volumes this does not appear to be a "gas only" report.
Was this a major release as defined by Subsection A of 19.15.29.7 NMAC	Yes
Reasons why this would be considered a submission for a notification of a major release	From paragraph A. "Major release" determine using: (1) an unauthorized release of a volume, excluding gases, of 25 barrels or more.

With the implementation of the 19.15.27 NMAC (05/25/2021), venting and/or flaring of natural gas (i.e. gas only) are to be submitted on the C-129 form.

Initial Response

The responsible party must undertake the following actions immediately unless they could create a safety hazard that would result in injury.

The source of the release has been stopped	True
The impacted area has been secured to protect human health and the environment	True
Released materials have been contained via the use of berms or dikes, absorbent pads, or other containment devices	True
All free liquids and recoverable materials have been removed and managed appropriately	True
If all the actions described above have not been undertaken, explain why	N/A

Per Paragraph (4) of Subsection B of 19.15.29.8 NMAC the responsible party may commence remediation immediately after discovery of a release. If remediation has begun, please prepare and attach a narrative of actions to date in the follow-up C-141 submission. If remedial efforts have been successfully completed or if the release occurred within a lined containment area (see Subparagraph (a) of Paragraph (5) of Subsection A of 19.15.29.11 NMAC), please prepare and attach all information needed for closure evaluation in the follow-up C-141 submission.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to OCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the OCD does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to groundwater, surface water, human health or the environment. In addition, OCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

These estimated dates and measurements are recognized to be the best guess or calculation at the time of submission and may (be) change(d) over time as more remediation efforts are completed.

The OCD recognizes that proposed remediation measures may have to be minimally adjusted in accordance with the physical realities encountered during remediation. If the responsible party has any need to significantly deviate from the remediation plan proposed, then it should consult with the division to determine if another remediation plan submission is required.
