13. Describe proposed or completed operations. (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work). SEE RULE 19.15.7.14 NMAC. For Multiple Completions: Attach wellbore diagram of proposed completion or recompletion.

Dugan Production Corp. (DPC) requests record cleanup for the referenced well. The well was initially perforated from 1775'-1786', 11', 3 spf, 33 holes in the Pictured Cliffs formation. It was wrongly reported as Basin Fruitland Coal on the C-105 Well Completion report submitted to the NMOCD, by then operator Rosetta Resources on 10/27/07. During DPC's workover to run tubing and install a sucker rod, bottom of the hole was tagged @ 1845' (PBTD). There was no BP tagged @ 1770' (which was set and NMOCD notified of, by then operator Caerus Southern Rockies LLC - sundry dated 1/4/13). DPC believes that the CIBP failed and slipped to the bottom of the well during normal operations during previous operator's ownership, and the DPC tagged depth of 1845' may be the top of the fish and the new PBTD. As per the report filed by Caerus on 9/22/11, CIBP was wireline set @ 1770' before perforating the Fruitland Coal interval between 1724'-1736', 12', 3 spf, 36 holes and then fracked.

Due to these discoveries, depth disparities, and the legal requirements to submit the appropriate documents with the corrected information, DPC requests this record cleanup. DPC acquired these wells from Juniper Resources Exploration LLC as part of a 107 well transfer (on file w/NMOCD dated 7/9/20). DPC will file an amended C-105 for the Pictured Cliffs and a new C-105 for the Fruitland Coal completion. We will also file an amended and a new C-104 for the respective zones. A downhole commingling application requesting permission to produce from both Fruitland Coal and Pictured Cliffs perforated intervals will also be submitted. As per our conversation with Brandon Powell w/NMOCD, DPC immediately shut-in production and operation activities as of 5/4/21.
