January 19, 2000

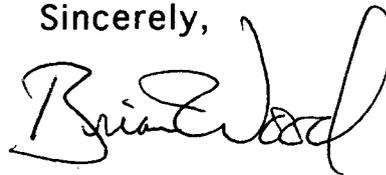

Mike Stogner
NM Oil Conservation Div.
2040 S. Pacheco St.
Santa Fe, NM 87505

Dear Mike,

On behalf of Trend Exploration, I am enclosing an application for a non-standard location based on 3-D seismic. Because of the proprietary nature of the seismic data, I ask that isochron map be kept confidential. I will provide evidence of notification once the green cards are returned to me.

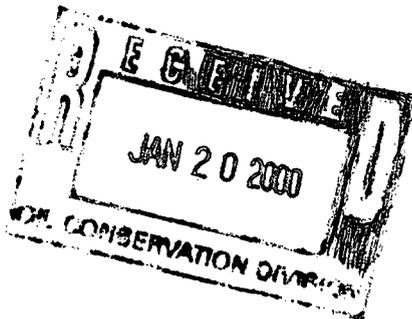

Please call me if you have any questions.

Sincerely,

Brian Wood

REQUEST FOR ADMINISTRATIVE APPROVAL FOR NON-STANDARD LOCATION
FOR TREND EXPLORATION I, LLC
PENJU #1 OIL WELL
4135' FSL & 2318' FEL SEC. 2, T. 16 S., R. 36 E., LEA COUNTY, NM

I. The well is on private surface and a private oil and gas lease. The proposed location is non-standard for the Lovington Penn NE (aka, Northeast Lovington-Pennsylvania Pool). Standard location must be within 150' of the center of a quarter-quarter. Well is 335' too far south and 188' too far west. (Closest standard location would be 4470 FSL and 2130 FEL.) The APD is attached.

II. A C-102 showing the well location and proration unit (Lots 10 and 15 of Sec. 2 which totals 80.00 acres) is attached. A General Land Office survey plat is also attached which shows Section 2 (boldly outlined). The lease (Lots 9, 10, 15, and 16 = 160.00 acres) is shown on the attached **CONFIDENTIAL** 3-D isochron map.

III. According to NM Oil Conservation Records, there is no production from the Strawn within a mile radius. A copy of the Lovington 7.5' USGS map is attached showing the proposed well site, spacing units (dashed lines), and lease (thick solid line). There is only one lease within a minimum 322' radius. Trend is the operator of all oil and gas interests in its private lease. A registered letter was sent on January 19 to the offset interest owners. A copy of the receipt and letter will be provided.

IV. A copy of the Lovington 7.5' USGS map is attached. The proposed well site is marked. Proration unit (80 acre stand up including Lots 10 and 15) are marked by dashed lines.

V. Trend selected its location based on a 3-D seismic survey. A standard drilling window does not overlap the optimum top of the indicated reservoir (see attached **CONFIDENTIAL** isochron map from the seismic survey).

VI. No archaeology sites were found.

VII. Surface conditions are not an issue.

VIII. Directional drilling is not feasible because it is not cost effective.

IX. I hereby certify that notice has been sent to the following lessees, lessors, operators of spacing units, or owners of undrilled leases which adjoin the applicant's spacing unit on one or more of the two sides or the single closest corner to the proposed well and that the information is current and correct:
