Re: Downhole Commingling
Linda Federal #1
Sec. 23, T20S, R38E
Lea County, NM.

Gentlemen:

Adobe Resources Corporation respectfully requests an exception to Division Rule 303-A to allow downhole commingling of the Warren Tubb and Blinebry Oil and Gas Pool in the Linda Federal #1 well. A packer leakage test was recently run, indicating a leak. It would not be economic to repair the wells as a dual completion. We are therefore applying for an artificial lift completion commingling both zones together. The following is attached for your review:

- A) A lease plat
- B) C-116's showing most recent test
- C) Decline curves for both zones

The estimated static bottom hole pressure for the Blinebry is 2020 psi and the Warren Tubb is 2145 psi. The produced fluids from the Tubb and Blinebry will not be incompatible. Oil gravity for both zones is 38° API. An analysis was made of the water from each zone to test their compatibility. The results of these tests are attached for your review. The proper chemical treatment will be initiated should there be a downhole scale problem indicated.

The value of the commingled production will not be less than the sum of the valves of the individual streams because the price per barrel from both zones is the same.

By copy of this letter, we are notifying the BLM and all offset Operators (see attached address list).

Should you need further information concerning the enclosed, please contact the undersigned.

**NEW MEXICO OIL CONSERVATION COMMISSION
WELL LOCATION AND ACREAGE DEDICATION PLAT**

Form C-103
Supersedes C-120
Effective 1-1-68

All distances must be from the outer boundaries of the Section

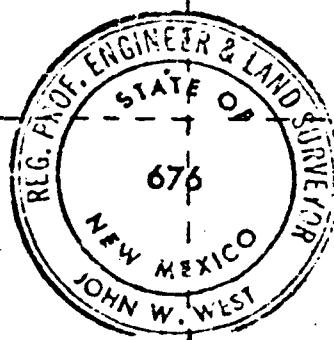

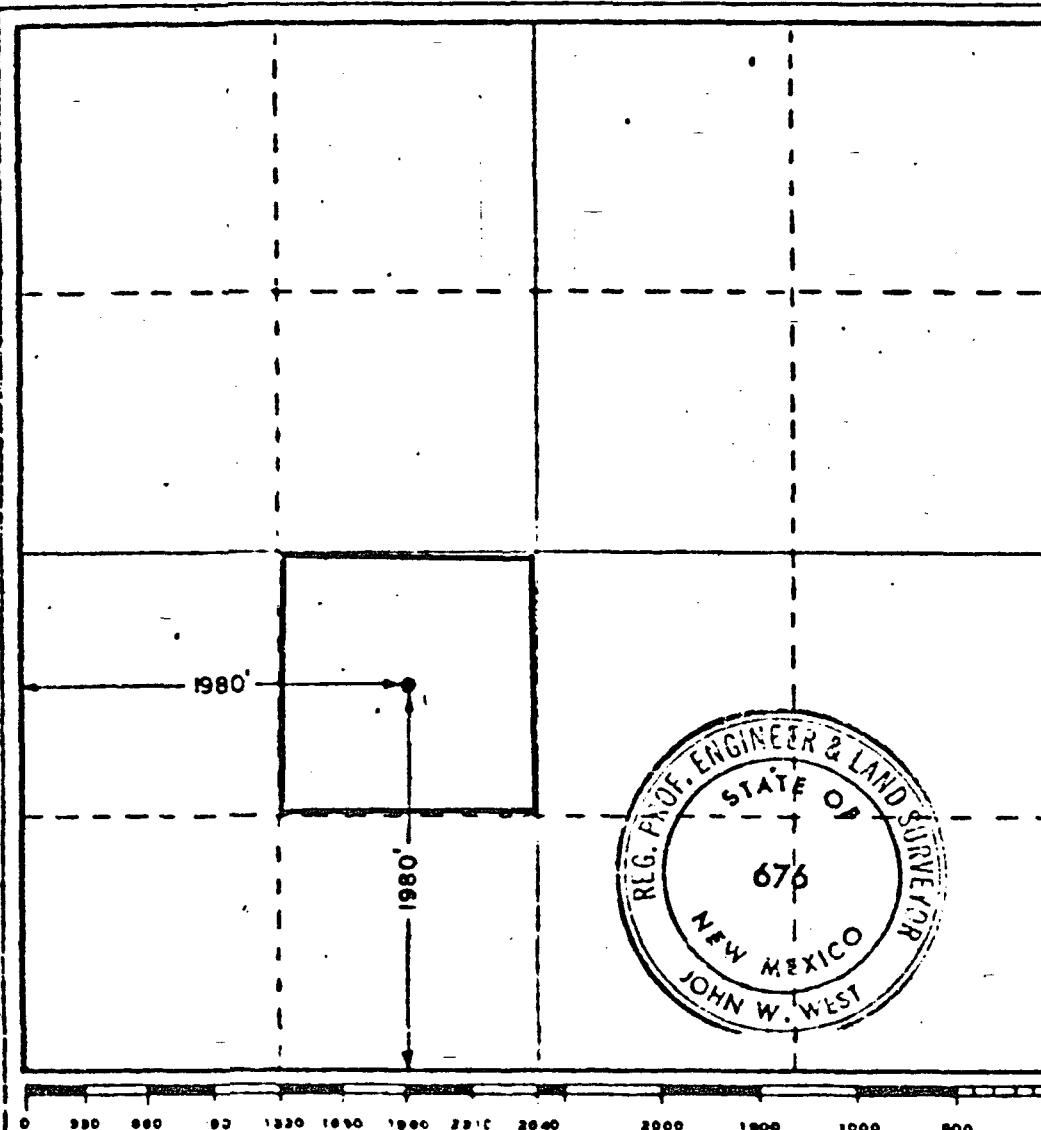

Relating to Adobe Oil Company			Lease LINDA FEDERAL		Well No. 1
Unit Letter K	Section 23	Township 20 SOUTH	Range 38 EAST	County LEA	
Acreage Dedication of Well:					
1980	feet from the	SOUTH	line and	1980	feet from the
Ground Level Elevation 3563.0	Reducing Friction	Blinebry Tubb	Pool	NMFU (Warren)	Dedicated Acreage: 40 Acres

1. Outline the acreage dedicated to the subject well by colored pencil or hachure marks on the plat below.
2. If more than one lease is dedicated to the well, outline each and identify the ownership thereof (both as to working interest and royalty).
3. If more than one lease of different ownership is dedicated to the well, have the interests of all owners been consolidated by communization, unitization, forced-pooling, etc?

Yes No If answer is "yes," type of consolidation _____

If answer is "no," list the owners and tract descriptions which have actually been consolidated (Use reverse side of this form if necessary.) _____

No allowable will be assigned to the well until all interests have been consolidated (by communization, unitization, forced-pooling, or otherwise) or until a non-standard unit, eliminating such interests, has been approved by the Commission.

No well will be produced at a rate greater than the amount of oil produced on the original test. During each oil production test, each well shall be produced at a rate not exceeding the top rate allowable for the pool in which it is located by more than 25 percent. Operator is encouraged to take advantage of this 25 percent tolerance in order that wells can be assigned increased allowances when authorized by the Commission.

Gas volumes must be reported in MCF measured at a pressure base of 15,025 psia and a temperature of 60° F. Specific gravity base will be 0.60.

Report casing pressure in flus of tubing pressure for any well producing through casing.

Keep original and one copy of this report to the district office of the New Mexico Oil Conservation Commission in accordance with Rule 301 and appropriate pool rules.
