APPLICATION FOR AUTHORIZATION TO INJECT

I. PURPOSE: XXX Secondary Recovery _____ Pressure Maintenance _____ Disposal _____ Storage
Application qualifies for administrative approval? _____ Yes _____ No

II. OPERATOR: APACHE CORPORATION
ADDRESS: 303 VETERANS AIRPARK LANE, SUITE 3000, MIDLAND, TX 79705
CONTACT PARTY: BRIAN WOOD (PERMITS WEST, INC.) PHONE: 505 466-8120

III. WELL DATA: Complete the data required on the reverse side of this form for each well proposed for injection.
Additional sheets may be attached if necessary.

IV. Is this an expansion of an existing project? _____ Yes XXX No
If yes, give the Division order number authorizing the project: R-12981 et al

V. Attach a map that identifies all wells and leases within two miles of any proposed injection well with a one-half mile radius circle drawn around each proposed injection well. This circle identifies the well's area of review.

VI. Attach a tabulation of data on all wells of public record within the area of review which penetrate the proposed injection zone. Such data shall include a description of each well's type, construction, date drilled, location, depth, record of completion, and a schematic of any plugged well illustrating all plugging detail.

WEST BLINEBRY DRINKARD UNIT
130, 185, 188, & 192

VII. Attach data on the proposed operation, including:
1. Proposed average and maximum daily rate and volume of fluids to be injected;
2. Whether the system is open or closed;
3. Proposed average and maximum injection pressure;
4. Sources and an appropriate analysis of injection fluid and compatibility with the receiving formation if other than reinjected produced water; and,
5. If injection is for disposal purposes into a zone not productive of oil or gas at or within one mile of the proposed well, attach a chemical analysis of the disposal zone formation water (may be measured or inferred from existing literature, studies, nearby wells, etc.).

*VIII. Attach appropriate geologic data on the injection zone including appropriate lithologic detail, geologic name, thickness, and depth. Give the geologic name, and depth to bottom of all underground sources of drinking water (aquifers containing waters with total dissolved solids concentrations of 10,000 mg/l or less) overlying the proposed injection zone as well as any such sources known to be immediately underlying the injection interval.

IX. Describe the proposed stimulation program, if any.

*X. Attach appropriate logging and test data on the well. (If well logs have been filed with the Division, they need not be resubmitted).

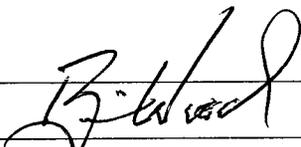

*XI. Attach a chemical analysis of fresh water from two or more fresh water wells (if available and producing) within one mile of any injection or disposal well showing location of wells and dates samples were taken.

XII. Applicants for disposal wells must make an affirmative statement that they have examined available geologic and engineering data and find no evidence of open faults or any other hydrologic connection between the disposal zone and any underground sources of drinking water.

XIII. Applicants must complete the "Proof of Notice" section on the reverse side of this form.

XIV. Certification: I hereby certify that the information submitted with this application is true and correct to the best of my knowledge and belief.

NAME: BRIAN WOOD TITLE: CONSULTANT

SIGNATURE:  DATE: DEC. 21, 2016

E-MAIL ADDRESS: brian@permitswest.com

* If the information required under Sections VI, VIII, X, and XI above has been previously submitted, it need not be resubmitted. Please show the date and circumstances of the earlier submittal: _____

III. WELL DATA

A. The following well data must be submitted for each injection well covered by this application. The data must be both in tabular and schematic form and shall include:

- (1) Lease name; Well No.; Location by Section, Township and Range; and footage location within the section.
- (2) Each casing string used with its size, setting depth, sacks of cement used, hole size, top of cement, and how such top was determined.
- (3) A description of the tubing to be used including its size, lining material, and setting depth.
- (4) The name, model, and setting depth of the packer used or a description of any other seal system or assembly used.

Division District Offices have supplies of Well Data Sheets which may be used or which may be used as models for this purpose. Applicants for several identical wells may submit a "typical data sheet" rather than submitting the data for each well.

B. The following must be submitted for each injection well covered by this application. All items must be addressed for the initial well. Responses for additional wells need be shown only when different. Information shown on schematics need not be repeated.

- (1) The name of the injection formation and, if applicable, the field or pool name.
- (2) The injection interval and whether it is perforated or open-hole.
- (3) State if the well was drilled for injection or, if not, the original purpose of the well.
- (4) Give the depths of any other perforated intervals and detail on the sacks of cement or bridge plugs used to seal off such perforations.
- (5) Give the depth to and the name of the next higher and next lower oil or gas zone in the area of the well, if any.

XIV. PROOF OF NOTICE

All applicants must furnish proof that a copy of the application has been furnished, by certified or registered mail, to the owner of the surface of the land on which the well is to be located and to each leasehold operator within one-half mile of the well location.

Where an application is subject to administrative approval, a proof of publication must be submitted. Such proof shall consist of a copy of the legal advertisement which was published in the county in which the well is located. The contents of such advertisement must include:

- (1) The name, address, phone number, and contact party for the applicant;
- (2) The intended purpose of the injection well; with the exact location of single wells or the Section, Township, and Range location of multiple wells;
- (3) The formation name and depth with expected maximum injection rates and pressures; and,
- (4) A notation that interested parties must file objections or requests for hearing with the Oil Conservation Division, 1220 South St. Francis Dr., Santa Fe, New Mexico 87505, within 15 days.

NO ACTION WILL BE TAKEN ON THE APPLICATION UNTIL PROPER PROOF OF NOTICE HAS BEEN SUBMITTED.

NOTICE: Surface owners or offset operators must file any objections or requests for hearing of administrative applications within 15 days from the date this application was mailed to them.

INJECTION WELL DATA SHEET

Tubing Size: 2-3/8" J-55 4.7# Lining Material: INTERNAL PLASTIC COAT

Type of Packer: LOCK SET INJECTION

Packer Setting Depth: ≈5534' (always 100' or less from highest actual perf)

Other Type of Tubing/Casing Seal (if applicable): _____

Additional Data

1. Is this a new well drilled for injection? XXX Yes No

If no, for what purpose was the well originally drilled? _____

2. Name of the Injection Formation: BLINEBRY, TUBB, & DRINKARD

3. Name of Field or Pool (if applicable): EUNICE; BLI-TU-DR, NORTH (POOL CODE 22900)

4. Has the well ever been perforated in any other zone(s)? List all such perforated intervals and give plugging detail, i.e. sacks of cement or plug(s) used. _____

NO

5. Give the name and depths of any oil or gas zones underlying or overlying the proposed injection zone in this area: _____

APACHE CORPORATION
WEST BLINEBRY DRINKARD UNIT 130, 185, 188, & 192
T. 21 S., R. 37 E., LEA COUNTY, NM

I. Goal is to re-permit 4 proposed 7200' deep water injection wells. All 4 were originally approved via WFX-925 on July 14, 2014. None were drilled before the 2-year expiration date of the WFX permit. Injection is proposed for the Blinebry, Tubb, and Drinkard from 5584' to 6690'. This is the correlative interval as measured in 30-025-36344 and as defined in the Unit Agreement Exhibit C.

All zones are in the Eunice; Blinebry-Tubb-Drinkard, North Pool (aka, Eunice; BLI-TU-DR, North and pool code = 22900). Wells and zones (Blinebry, Tubb, and Drinkard) are part of the West Blinebry Drinkard Unit (Cases 14125 and 14126, both Order Number R-12981), formed in 2008 by Apache.

WBDU Well	API	Location	Section
130	30-025-42495	780 FNL & 540 FEL	17
185	30-025-42493	695 FSL & 1760 FEL	8
188	30-025-42569	640 FSL & 2170 FWL	9
192	30-025-42494	1865 FSL & 1985 FEL	8

II. Operator: Apache Corporation (OGRID #873)
Operator phone number: (432) 818-1062
Operator address: 303 Veterans Airpark Lane, Suite 3000
Midland, TX 79705
Contact for Application: Brian Wood (Permits West, Inc.)
Phone: (505) 466-8120

III. A. (1) Unit Size: 2480 acres Unit Numbers: 300341 & NMNM-120042X
Unit Area (Exhibit B): T. 21 S., R. 37 E.
Section 4: Lot 15, S2SW4, & SE4
Section 8: E2, NENW, & E2SW
Sections 9 & 16: all
Section 17: E2 & E2SW4
Section 21: E2NE4

Well	BLM Lease	closest lease boundary	closest unit boundary
130	NMLC-032096A	540'	2100'
185	NMNM-090161	625'	1121'
188	NMNM-090161	640'	3110'
192	NMNM-090161	775'	1014'

A. (2) Proposed casing and cement details are below. Cement will be circulated to the surface. If unsuccessful, then TOC will be determined by temperature log.

well & casing O. D.	pounds per foot	setting depth	hole O. D.	cement sacks	TOC
WBDU 130					
8.625"	24	1375'	11"	440	GL

8.625"	24	1375'	11"	440	GL
5.5"	17	7200'	7.875"	975	GL
WBDU 188					
8.625"	24	1380'	11"	440	GL
5.5"	17	7200'	7.875"	975	GL
WBDU 195					
8.625"	24	1400'	11"	465	GL
5.5"	17	7200'	7.875"	975	GL

A. (3) Tubing will be internally plastic coated 2-3/8", J-55, 4.7#. Setting depths ≈50' above the highest perforation.

A. (4) A nickel-plated Arrow-set packer will be set ≈50' above the highest perforation in each well.

- B. (1) Injection zone will be the Blinebry, Tubb, and Drinkard carbonates. The zones are part of the Eunice; Blinebry-Tubb-Drinkard, North Pool (22900). Estimated fracture gradient is ≈ 0.56 psi per foot.
- B. (2) The wells and injection intervals will be cased holes.
- B. (3) Wells were originally planned as oil wells, but will be drilled and completed as water injection wells.
- B. (4) The wells have not yet been drilled.
- B. (5) Next higher oil or gas zone in the area of review is the San Andres, part of the Hare; San Andres (Gas) Pool (78080). Its estimated bottom ranges from 5130' to 5220'. Injection will occur in the Blinebry - Drinkard interval. Blinebry top ranges from 5618' to 5724'. Next lower oil or gas zone in the area of review is the Wantz; Abo Pool (62700). Abo top ranges from 6683' to 6837'. Abo will not be perforated. However, it will be penetrated to allow for better logs.

IV. This is not a horizontal or vertical expansion of an existing injection project. The case file for the unit approval (R-12981) describes the water flood. There have been over a dozen water flood expansion (WFX) approvals since then.

V. Exhibit C shows all 147 existing or proposed wells (122 oil or gas wells + 17 water injection wells + 6 P&A wells + 2 water wells) in the areas of review, regardless of depth. Exhibit D shows all 828 existing wells (619 oil or gas wells + 101 injection or disposal wells + 87 P & A wells + 20 water wells + 1 brine well) within 2-mile radii.

Exhibit E shows all leases (only BLM, State, and fee) within a half-mile radius. Exhibit F shows all lessors (only BLM, State, and fee) within a two-mile radius. Details on the leases within a half-mile follow on the next two pages.

VI. One hundred forty-seven existing wells (Exhibit G) are within the areas of review. Ninety-one of the wells penetrated (82) or will penetrate (9) the Blinebry (top $\geq 5584'$ as defined in Unit Agreement Exhibit C, actual shallowest Blinebry top in these 4 wells is 5618'). Tables abstracting the well construction details and histories of the penetrators are in Exhibit H. Three of the 82 penetrators are P&A. Diagrams of the three P&A wells are in Exhibit I, sorted by API number.

- VII. 1. Average injection rate will be ≈ 2500 bwpd per well. Maximum injection rate will be ≈ 3000 bwpd per well.
2. System will be closed. The wells are tied into the existing unit pipeline system. The system consists of a branched injection system with centrifugal injection pumps.
3. Average injection pressure will be ≈ 1100 psi. Maximum injection pressure will be 1120 psi (Conclusion 24 of Order R-12981).
4. Water source will be two existing $\approx 4000'$ deep San Andres water supply wells, plus produced water from Blinebry, Tubb, and Drinkard zones. The source water and produced water are collected in separate skim tanks. The two water streams (source and produced) are commingled in a tank before being piped to the injection wells. A comparison of nearby analyses and San Andres follows. No compatibility problems have reported from the 43,408,876 barrels that have been injected to date in the unit since 2009.

	WBDU Injection Pump Discharge	San Andres 919-S

Total Dissolved Solids	20,702.9 mg/l	13,273.0 mg/l

5. Apache has 124 active or proposed oil wells and 38 active or proposed injection wells in the Unit. It is the goal of the project to increase production.

VIII. The Unit is on the north end of a north-northwest to south-southeast trending anticline. It is part of the Penrose Skelly trend and parallels the west edge of the Central Basin Platform. Dip is 1° to 2°. The injection interval is Leonardian in age, ≈1106' thick, and consists of tan to dark gray shallow marine carbonates, many of which have been dolomitized. Core filling and replacement anhydrite are common in the limestone. Nodular anhydrite is common in the dolomite. Five per cent porosity cut off is used to determine pay zones. Impermeable shale and carbonates vertically confine the interval.

There are 160 injection wells active or proposed in the Eunice; Blinebry-Tubb-Drinkard, North Pool (code = 22900). West Blinebry Drinkard Unit shares its east border with Apache's Northeast Drinkard Unit. Three similar water floods (East Blinebry Drinkard Unit, Central Drinkard Unit, and Warren Blinebry Unit) are within a mile of the West Blinebry Drinkard Unit. The Central Drinkard Unit has been under water flood since the 1960s. Formation depths are:

State Engineer records (Exhibit J) indicate two water wells (CP 01026 & 00554) are within a mile (1610 meters) radius. Deepest of the water wells is 167'. Water sands were reported from 220' to 240' in an oil well (30-025-06642) in B-17-21s-37e. One water well (CP 00554) was dry on November 2, 2016. The other water well (CP 01026 (aka, Kerbo Domestic)) was sampled. Two other wells not in State Engineer records, but within a mile, were found and sampled. A total of 6 wells within 7,000' were sampled. Analyses are in Exhibit K. Ogallala aquifer is $\geq 1\text{-}1/4$ mile northeast.

No existing underground drinking water source is below the injection interval within a mile radius.

There will be >5300' of vertical separation, including <1000' of salt and anhydrite, between the bottom of the only likely underground fresh water source (red beds) and the top of the injection zone. Water sands were reported from 220' to 240' in an oil well (30-025-06642) in B-17-21s-37e. Produced water is currently being injected (196 wells) or disposed (8 wells) into the Yates, Seven Rivers, Queen, Grayburg, San Andres, Blinebry, Tubb, and Drinkard in T. 21 S., R. 37 E.

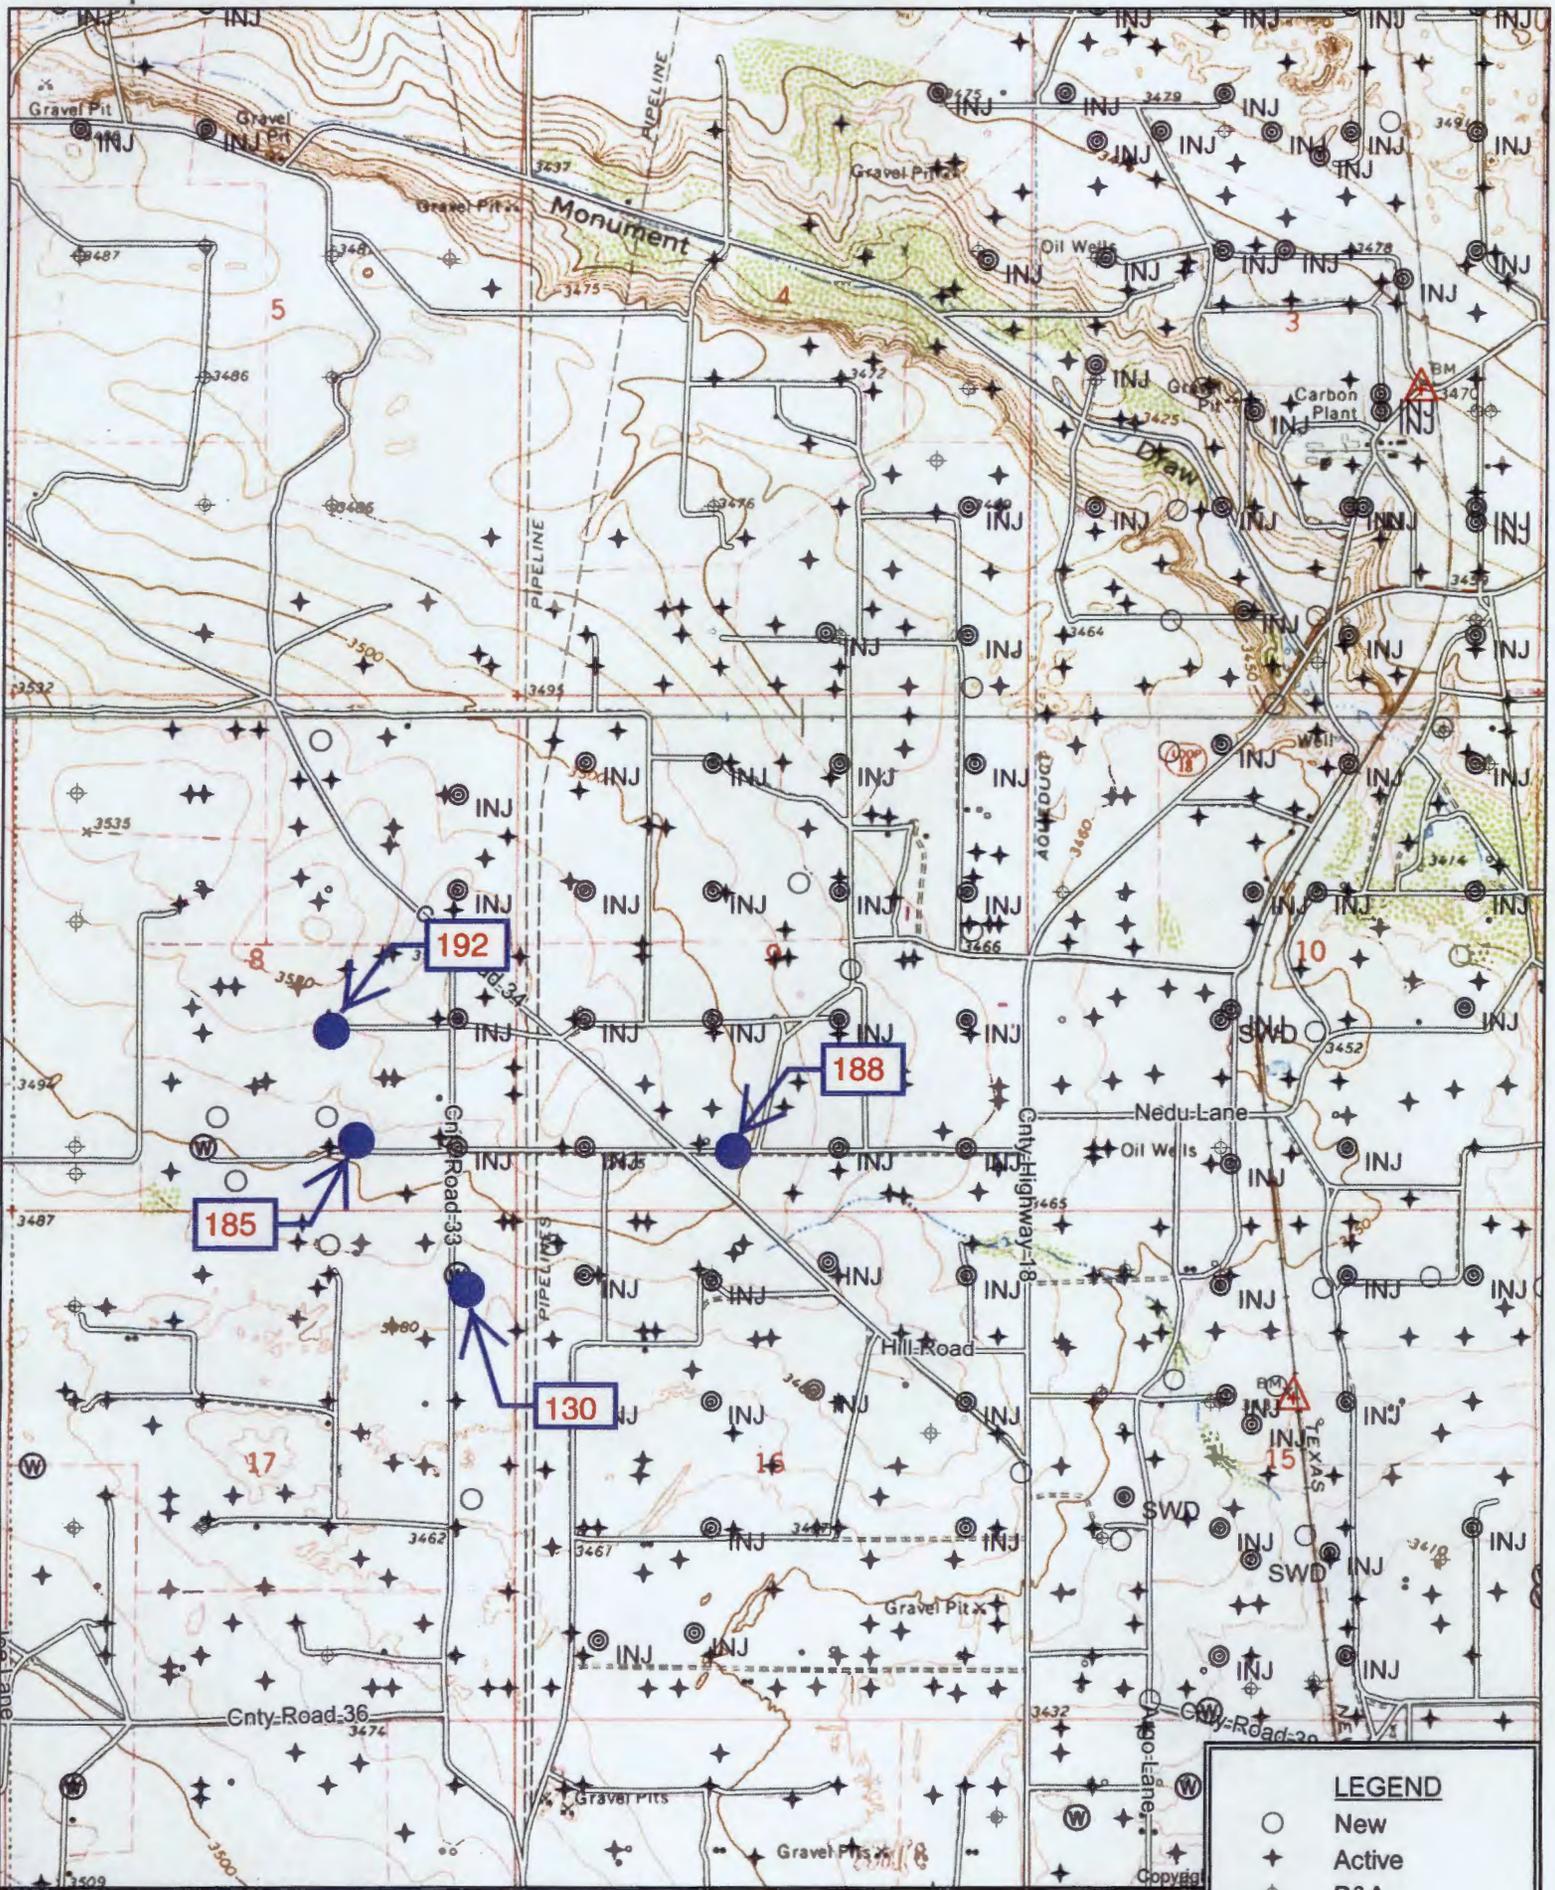

IX. The wells will be stimulated with acid.

X. Open hole dual laterolog, MSFL, CNL, litho-density, gamma ray, and caliper logs will be run from TD to the base surface casing. CNL and gamma ray logs will be run from TD to GL.

XI. Four fresh water wells are within the four 1-mile radii. Three of the four (the fourth was dry) were sampled and analyses from those wells in Exhibit K. Analyses from three other wells within 7,000' are also in Exhibit K.

XII. Apache (Exhibit L) is not aware of any geologic or engineering data that may indicate the injection interval is in hydrologic connection with any underground sources of water. Closest Quaternary faults are >100 miles west and southwest. There are 160 active or proposed Blinebry, Tubb, or Drinkard injection wells in New Mexico. Previously approved water flood expansions (WFX-) in the unit include 854, 857, 913, 921, 922, 923-A, 923-B, 924, 948, 952, 954, 955, 958, and 959.

XIII. A legal ad (see Exhibit M) was published November 2, 2016. Notice (this application) has been sent (Exhibit N) to the surface owners (Chevron (130) and Millard Deck Estate (185, 188, & 192)), offset Blinebry, Tubb, or Drinkard operators (none), offset non-Blinebry, Tubb, or Drinkard operators (Chevron), government lessors (BLM, NMSLO), lessees (Chevron, ConocoPhillips, Occidental), or leasehold operating rights holders (Buttram Energies, ConocoPhillips, Ganz (Carl), Ganz Trust, Hannifin (Barbara), Hannifin (Mark), Hannifin (Patrick), Hannifin (Robert), John Hendrix Corp., Johnson (Cathy), Lanexco, Lansford (Robert), NM Co. Inc., Oxy USA, Pearlbrook Estate, Penroc Oil Corp., Phipps (Tommy), Production Company Gathering Co., Six Aches, and Vance Family Partnership,) in the areas of review.

WELL CONSTRUCTION DATA

Surface Casing

Hole Size: _____ Casing Size: 13 3/8

Cemented with: 300 sx. or _____ ft³

Top of Cement: Surf Method Determined: Circ

Intermediate Casing

Hole Size: _____ Casing Size: 9 5/8

Cemented with: 600 sx. or _____ ft³

Top of Cement: Surf Method Determined: Per plugging Rpt.

Production Casing

Hole Size: _____ Casing Size: _____

Cemented with: _____ sx. or _____ ft³

Top of Cement: _____ Method Determined: _____

Total Depth: _____

Injection Interval

_____ feet to _____

(Perforated or Open Hole; indicate which)

INJECTION WELL DATA SHEET

Tubing Size: _____ Lining Material: _____

Type of Packer: _____

Packer Setting Depth: _____

Other Type of Tubing/Casing Seal (if applicable): _____

Additional Data

1. Is this a new well drilled for injection? _____ Yes _____ No

If no, for what purpose was the well originally drilled? _____

2. Name of the Injection Formation: _____

3. Name of Field or Pool (if applicable): _____

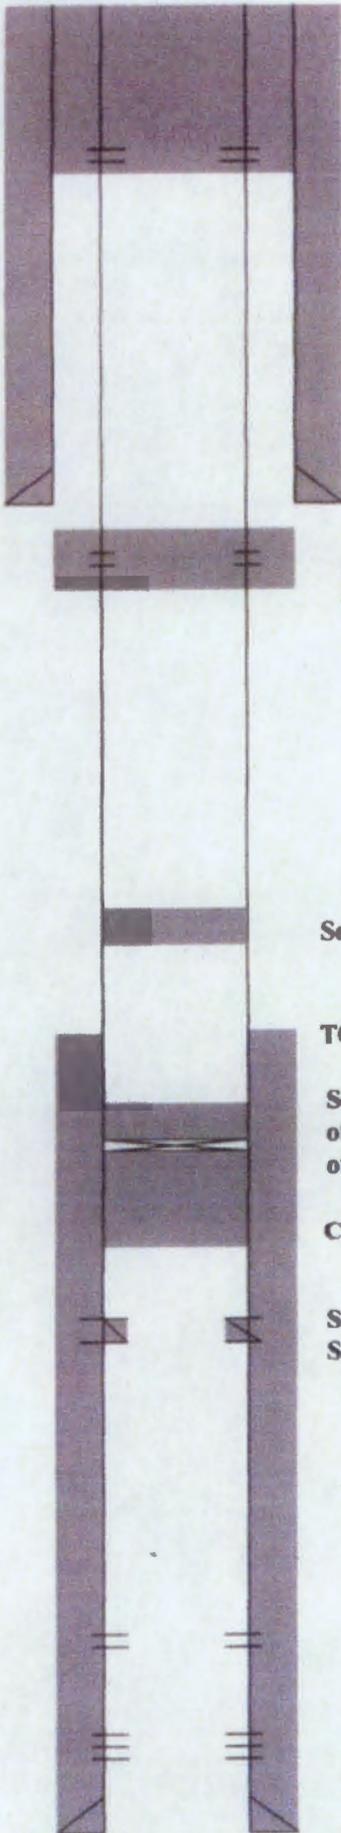

4. Has the well ever been perforated in any other zone(s)? List all such perforated intervals and give plugging detail, i.e. sacks of cement or plug(s) used. _____

5. Give the name and depths of any oil or gas zones underlying or overlying the proposed injection zone in this area: _____

From: **Oldani, Martin** Martin.Oldani@apachecorp.com
Subject: FW: shallow faulting in the vicinity of WBDU
Date: January 11, 2016 at 4:27 PM
To: brian@permitswest.com
Cc: Shapot, Bret Bret.Shapot@apachecorp.com

Brian,

As per Mark's comments below, our G&G staff has taken a look at the potential issue of shallow faulting in the WBDU area and have concluded there is none present across the area and no danger of shallow faulting as a conduit to groundwater contamination.

Regards,

MARTIN J. OLDANI

Subject: shallow faulting in the vicinity of WBDU

Martin:

In reference to the meeting this morning where we discussed the possibility of shallow faulting in the WBDU area and its potential impact on the permitting of the injection well(s) into the Drinkard, I submit to you the attached slide set from me and Justin. You will see that we have done several extractions on the seismic data and there is no indication of faulting above the Glorieta which is well above the Drinkard and below the younger evaporites. Also, as we suspected, there are no surface faults mapped in the area – the nearest being more than 50 miles away.

Please contact me or Justin if you have further questions.

Sincerely,

DR. MARK PASLEY

LEGAL	LEGAL
LEGAL NOTICE November 2, 2016	
Apache Corporation is applying to inject water in 4 wells in the West Blinebry Drinkard Unit in T. 21 S., R. 37 E., Lea County, NM. Injection will be in the Blinebry and Drinkard zones from approximately 5584' to 6690'. Maximum injection rate will be 3,000 bwpd per well. The wells are 1/2 to 3 miles NNW of Eunice, NM. Well details are:	
<u>WBDU</u>	<u>Well Location</u>
130	780 FNL & 540 FEL Sec. 17
185	695 FSL & 1760 FEL Sec. 8
188	640 FSL & 2170 FWL Sec. 9
192	1865 FSL & 1985 FEL Sec. 8
Interested parties must file objections or requests for hearing with the NM Oil Conservation Division, 1220 South Saint Francis Dr., Santa Fe, NM 87505 within 15 days. Additional information can be obtained by contacting: Brian Wood, Permits West, Inc., 37 Verano Loop, Santa Fe, NM 87508. Phone number is (505) 468-8120. #31320

TYPICAL LETTER

Chevron USA Inc
6301 Deauville
Midland TX 79706

Apache Corporation is applying (see attached application) to drill four 7200' deep wells in its West Blinebry Drinkard Unit as water injection wells. The wells are 2-3 miles north of Eunice in Lea County NM. Injection is proposed for the Blinebry, Tubb, and Drinkard from 5584' to 6690'. This is the correlative interval as measured in 30-025-36344 and as defined in the Unit Agreement Exhibit C.

As required by NM Oil Conservation Division (NMOCD) Rules, I am notifying you of the following project. This letter is a notice only. No action is needed unless you have questions or objections.

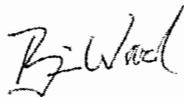

WBDU Well	API	Location	T. 21 S., R. 37 E. Section
130	30-025-42495	780 FNL & 540 FEL	17
185	30-025-42493	695 FSL & 1760 FEL	8
188	30-025-42569	640 FSL & 2170 FWL	9
192	30-025-42494	1865 FSL & 1985 FEL	8

Applicant Name: Apache Corporation (432) 818-1062
Applicant's Address: 303 Veterans Airpark Lane, #3000, Midland, TX 79705

Submittal Information: Application for injection will be filed with the NMOCD. If you have an objection, or wish to request a hearing, then it must be filed with the NMOCD within 15 days of receipt of this letter. NMOCD address is 1220 South St. Francis Dr. Santa Fe, NM 87505. NMOCD phone is (505) 476-3440.

Please call me if you have any questions.

Sincerely,

Brian Wood

Jami Bailey, Division Director
Oil Conservation Division

Administrative Order WFX-925
July 14, 2014

**ADMINISTRATIVE ORDER
OF THE OIL CONSERVATION DIVISION**

Under the provisions of Division Order R-12981, Apache Corporation (OGRID No. 873) has made application to the Division for permission to add four new injection wells to its West Blinebry-Drinkard Unit (WBDU) Waterflood Project in the North Eunice Blinebry-Tubb-Drinkard Pool (Pool code 22900) in Lea County, New Mexico. These wells are being proposed for injection into the Unitized interval that includes the Blinebry, Tubb, and Drinkard formations of the WBDU. These wells are proposed to complement existing injection wells in the south end of the Unit to complete uniform 40-acre, five-spot waterflood patterns.

THE DIVISION DIRECTOR FINDS THAT:

The application has been duly filed under the provisions of Division Rule 19.15.26.8B. NMAC and satisfactory information has been provided that affected parties as defined in said rule have been notified and no objections remain outstanding. The applicant has presented satisfactory evidence that all requirements prescribed in Rule 19.15.26.8 NMAC have been met and the operator is in compliance with Rule 19.15.5.9 NMAC.

The proposed expansion of the above-referenced waterflood project, will prevent waste, is in the best interests of conservation, will not impair correlative rights, and should be approved.

IT IS THEREFORE ORDERED THAT:

Apache Corporation, as operator, is hereby authorized to inject water into the following new wells for the purpose of secondary recovery through plastic-lined tubing set into a packer:

API No.	Well	Unit	Sec	Twp	Rng	Footage N/S	Footage E/W
30-025-Pending	West Blinebry Drinkard Unit No. 130W	A	17	21 S	37 E	780 FNL	540 FEL
30-025-Pending	West Blinebry Drinkard Unit No. 185W	O	8	21 S	37 E	695 FSL	1760 FEL
30-025-Pending	West Blinebry Drinkard Unit No. 188W	N	9	21 S	37 E	640 FSL	2170 FWL
30-025-Pending	West Blinebry Drinkard Unit No. 192W	J	8	21 S	37 E	1865 FSL	1985 FEL

The approved injection interval for the four wells will be the **Unitized Formation as approved in Ordering Paragraph (3)** of Division Order No. R-12981 dated August 11, 2008. The Unitized Formation is described as the interval from a depth of 75 feet above the stratigraphic Blinebry marker to the top of the Abo formation, as found on the Type Log from the Hawk B-1 Well No. 34 (API No. 30-025-36344), which is that interval correlative to the interval from 5584 feet to 6690 feet below the surface measured from the derrick floor as shown on the Type Log. These four wells are approved for initial perforations in the Drinkard formation from approximately 6100 feet to 6700 feet and, under this Order, shall be authorized for the addition of perforations for the remaining interval of the Unitized Formation.

The operator has also satisfied the requirement for notification of affected parties with the original application for the addition of perforations within approved injection interval, the Unitized Formation. As part of the Form C-103 to be submitted under Division Rule 19.15.7.14A.(f) NMAC to Division's District I office for approval of changes in the perforation interval, the operator shall include with this form documentation (such as a correlation of geophysical logs) that demonstrates the new perforated interval is within the Unitized Formation.

The approved maximum surface injection pressure shall be **1120 psig or 0.2 psig per foot of depth to the uppermost perforation in the injection well, whichever is less, as approved in Ordering Paragraph (13)** of Division Order No. R-12981 dated August 11, 2008. The operator shall set the injection packer in individual wells no more than 100 feet above the shallowest perforation for the permitted injection interval.

IT IS FURTHER ORDERED THAT:

The operator shall take all steps necessary to ensure that the injected fluid enters only the approved injection interval and is not permitted to escape to other formations or onto the surface.

After installing tubing, the casing-tubing annulus shall be loaded with an inert fluid and equipped with a pressure gauge or an approved leak detection device in order to determine leakage in the casing, tubing, or packer. The casing shall be pressure tested from the surface to the packer setting depth to assure casing integrity.

The well shall pass an initial mechanical integrity test ("MIT") prior to initially commencing injection and prior to resuming injection each time any injection packer is unseated. All MIT testing procedures and schedules shall follow the requirements in Rule 19.15.26.11A. NMAC. The Division Director retains the right to require at any time wireline verification of completion and packer setting depths in this well.

The wellhead injection pressure on these wells shall be limited as listed above. In addition, the injection well or header system shall be equipped with a pressure limiting device in workable condition which shall, at all times, limit surface tubing pressures to the maximum allowable pressures for these wells.

Subject to the limitations within the hearing order permitting this project, the Director of the Division may authorize an increase in tubing pressure upon a proper showing by the operator of said well that such higher pressure will not result in migration of the injected fluids from the approved injection interval. Such proper showing shall be demonstrated by sufficient evidence

including but not limited to an acceptable Step-Rate Test.

The operator shall notify the supervisor of the Division's District I office of the date and time of the installation of injection equipment and of any MIT test so that the same may be inspected and witnessed. The operator shall provide written notice of the date of commencement of injection to the District I office. The operator shall submit monthly reports of the disposal operations on Division Form C-115, in accordance with Rules 19.15.26.13 and 19.15.7.24 NMAC.

Without limitation on the duties of the operator as provided in Rules 19.15.29 and 19.15.30 NMAC, or otherwise, the operator shall immediately notify the District I office of any failure of the tubing, casing or packer in the approved injection well, or of any leakage or release of water, oil or gas from around any produced or plugged and abandoned well in the area, and shall take such measures as may be timely and necessary to correct such failure or leakage.

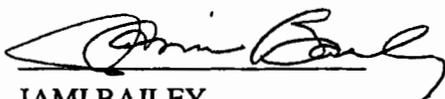

The injection authority granted under this order is not transferable except upon division approval. The division may require the operator to demonstrate mechanical integrity of any injection well that will be transferred prior to approving transfer of authority to inject.

The division may revoke this injection permit after notice and hearing if the operator is in violation of 19.15.5.9 NMAC.

Compliance with this order does not relieve the operator of the obligation to comply with other applicable federal, state or local laws or rules, or to exercise due care for the protection of fresh water, public health and safety and the environment.

PROVIDED FURTHER THAT, jurisdiction is retained by the Division for the entry of such further orders as may be necessary for the prevention of waste and/or protection of correlative rights or upon failure of the operator to conduct operations (1) to protect fresh or protectable waters or (2) consistent with the requirements in this order, whereupon the Division may, after notice and hearing, terminate the disposal authority granted herein. The subject wells shall be governed by all provisions of Division Order No. R-12981 and associated administrative orders.

The injection authority granted herein shall terminate two (2) years after the effective date of this order if the operator has not commenced injection operations into at least one of the subject wells, provided however, the Division, upon written request by the operator received prior to the two-year deadline, may grant an extension thereof for good cause shown.

695' FSL & 1760' FEL UL: O Sec: 8 T21S R37E LEA COUNTY, NM

RECEIVED

1. GEOLOGIC NAME OF SURFACE FORMATION: Quaternary Aeolian Deposits
2. ESTIMATED TOPS OF GEOLOGICAL MARKERS & DEPTHS OF ANTICIPATED FRESH WATER, OIL OR GAS:

Quaternary Aeolian	Surface	San Andres	4112'
Rustler	1250'	Glorieta	5199'
Top of Salt	1340'	Paddock	5277'
Base of Salt/Tansill	2513'	Blinebry	5674'
Yates	2652'	Tubb	6208'
Seven Rivers	2899'	Drinkard	6512'
Queen	3437'	ABO	6756'
Grayburg	3717'	TD	7200'

Depth to Ground Water: ~ 65'

All fresh water & prospectively valuable minerals, as described by BLM, encountered during drilling, will be recorded by depth & adequately protected. All oil & gas shows within zones of correlative rights will be tested to determine commercial potential.

CASING PROGRAM: All casing is new & API approved

HOLE SIZE	DEPTH	OD CSG	WEIGHT	COLLAR	GRADE	COLLAPSE	BURST	TENSION
11"	0' - 1275'	8-5/8"	24#	STC	J-55	1.125	1.0	1.8
7-7/8"	0' - 7200'	5-1/2"	17#	LTC	L-80	1.125	1.0	1.8

3. CEMENT PROGRAM:

A. 8-5/8" Surface (100% excess cmt to surf):

Lead: 240 sx Cl C w/ 2% CaCL2 + 0.13# CF + 3# LCM1 _ 0.005 gps FP-6L + 4% Bentonite
(13.5 wt, 1.75 yld, 8.962 gal/sx) Comp Strengths: 12 hr - 500 psi 24 hr - 782 psi

Tail: 200 sx Cl C w/1% CaCL@ + 0.13# CF + 0.005 gps FP-6L
(14.8 wt, 1.34 yld, 6.302 gal/sx) Comp Strengths: 12 hr - 755psi 24hr - 1347psi

B. 5-1/2" Production (Cmt to surf / 30 % excess cmt):

Lead: 700 sx (35:65) Poz Cl C w/ 5% CaCL2 + 0.125 # CF + 3# LCM1 + 0.5% FL52 + 0.005 gps FP6L + 6% Bentonite,
0.3% Sodium Metasilicate (12.6 wt, 2.07 yld, 10.995 gal/sx) Comp Strengths: 12 hr - 580 psi 24 hr - 1072 psi

Tail: 275 sx (50:50) Poz Cl C w/ 5% CaCL2 + 0.13% CF + 3# LCM1 + 0.005gps FP6L + 2% Bentonite + 1% FL25 + 1%
BA58 + 0.1% Sodium Metasilicate
(14.2 wt, 1.37 yld, 5.971 gal/sx) Comp Strengths: 12 hr - 1130 psi 24 hr - 1633 psi

** The above cmt volumes could be revised pending caliper measurement from open hole logs. For Surface csg: If cmt does not circ to surface, the appropriate BLM office shall be notified, TOC shall be determined by running a temperature log, operator will propose a remediation method & request BLM approval.

HOBBS OCD

DRILLING PLAN: BLM COMPLIANCE
(Supplement to BLM 3160-3)

MAY 19 2015

APACHE CORPORATION (OGRID: 873) WEST BLINEBRY DRINKARD UNIT #188W

Projected TD: 7200' GL: 3500'

640' FSL & 2170' FWL UL: N Sec: 9 T21S R37E LEA COUNTY, NM

RECEIVED

1. GEOLOGIC NAME OF SURFACE FORMATION: Quaternary Aeolian Deposits
2. ESTIMATED TOPS OF GEOLOGICAL MARKERS & DEPTHS OF ANTICIPATED FRESH WATER, OIL OR GAS:

Quaternary Aeolian	Surface	San Andres	4136'
Rustler	1250'	Glorieta	5175'
Top of Salt	1340'	Paddock	5240'
Base of Salt/Tansill	2513'	Blinebry	5680'
Yates	2656'	Tubb	6126'
Seven Rivers	2899'	Drinkard	6437'
Queen	3463'	ABO	6683'
Grayburg	3746'	TD	7200'

Depth to Ground Water: ~ 65'

All fresh water & prospectively valuable minerals, as described by BLM, encountered during drilling, will be recorded by depth & adequately protected. All oil & gas shows within zones of correlative rights will be tested to determine commercial potential.

CASING PROGRAM: All casing is new & API approved
