OXY USA INC requests approval of a surface pool commingle at the Mesa Verde Unit Battery. Wells in Mesa Verde Bone Spring Unit (NMNM137096X) and Mesa Verde Wolfcamp Unit (NMNM137099X) will feed the battery. The oil production will be measured through eight LACT meters, which will serve as the Facility Measurement Points (FMPs). Gas production will be separated and measured through an OXY check meter, which will serve as the FMP. Production will be allocated back to each well based on well test. All water will be sent to the Sand Dunes SWD Integration System.

The working interest, royalty interest and overriding royalty interest owners are identical for the Bone Spring and Wolfcamp Units, so notice was not required.

OXY USA INC requests the option to add wells within the Unit boundary outlined in Order No. R-14494 and R-14500.

Production estimates are average of first 6 month volumes

The working interest, royalty interest and overriding royalty interest owners are identical for the Bone Spring and Wolfcamp units, so notice was not required.

Process Description:

Production is sent through two 10' X 40' three-phase production separators. Oil production flows through four 8' X 20' heater treaters, then is sent to four vapor recovery towers. It then flows to twelve oil storage tanks before being pumped through eight LACT meters (FMPs located at Lat 32.211929 Long -103.708997, S/N*) and sent to the oil sales line. A truck load FMP will be set up at the facility for use as back-up in the event of a LACT meter failure.

Oil production will be allocated back to each well based on well test. For testing purposes, the facility will be equipped with twelve permanent 6' x 20' three-phase test separators. Each test vessel will be equipped with oil turbine meters, gas orifice meters and water turbine meters. In addition, the facility is equipped to add up to twelve portable 6' X 20' three-phase test separators.

Gas production will be sent from the separators to two gas scrubbers. It will then flow through an Oxy check meter (Lat 32.211929 Long -103.708997, S/N*), which will serve as the gas FMP for the purpose of royalty payment, then sent to sales.

All water from the Mesa Verde Unit Battery will be sent to the Sand Dunes SWD Integration System.

*Meter number to be submitted upon installation. The oil and gas meters will be calibrated on a regular basis per API, NMOCD and BLM specifications.

Additional Application Components:

The flow of production is shown in detail on the enclosed facility diagram. Also enclosed is a map detailing the lease and unit boundaries, well and battery locations.

OXY USA INC requests the option to add wells within the Unit boundary outlined in Order No. R-14494 and R-14500.

Commingling this production is the most effective means of producing the reserves. The surface commingle application will be submitted separately for approval per NMOCD and BLM regulations.

OXY USA INC understands the requested approval will not constitute the granting of any right-of-way or construction rights not granted by the lease instrument. The surface commingle application will be submitted separately for approval per SLO regulations.
