Process Description for Corral Canyon 36-25 Fed Com #24H, 25H and 26H

Production from Corral Canyon 36-25 Fed Com 24H, 25H and 26H will flow off-lease to Train #2 at the Corral Canyon 36-25 Battery. Each well will have its own 8' X 20' three-phase production separator which will be equipped with an oil turbine meter (S/N*), gas orifice meter (S/N*) and water turbine meter. Oil production is sent through two line heaters then to two 8' X 20' heater treaters. Oil production then flows through a vapor recovery tower. It then flows to four oil storage tanks before being pumped through two LACT meter S/N* (FMP located at Lat 32.158769 Long -103.937874) and sent to oil sales. Oil production will be allocated back to each well based on well test.

Corral Canyon 36-25 Fed Com 24H, 25H and 26H will be tested daily prior to Range 1 of decline, and will be tested at least three times per month during Range 1 of decline. When Range 2 decline is started, the wells will be tested at least twice per month. Wells will be tested at least once per month when Range 3 of decline is started, as specified in Hearing Order R-14299.

Gas production from all wells will be combined after the individual three-phase separators. It will then flow through an Oxy check meter S/N* (Lat 32.158769 Long -103.937874), which will serve as the gas FMP for the purpose of royalty payment, then sent to sales.

All water from the Corral Canyon 36-25 Battery will be sent to the Corral Fly Water System.

*Meter number to be submitted upon installation. The oil and gas meters will be calibrated on a regular basis per API, NMOCD and BLM specifications.

Additional Application Components

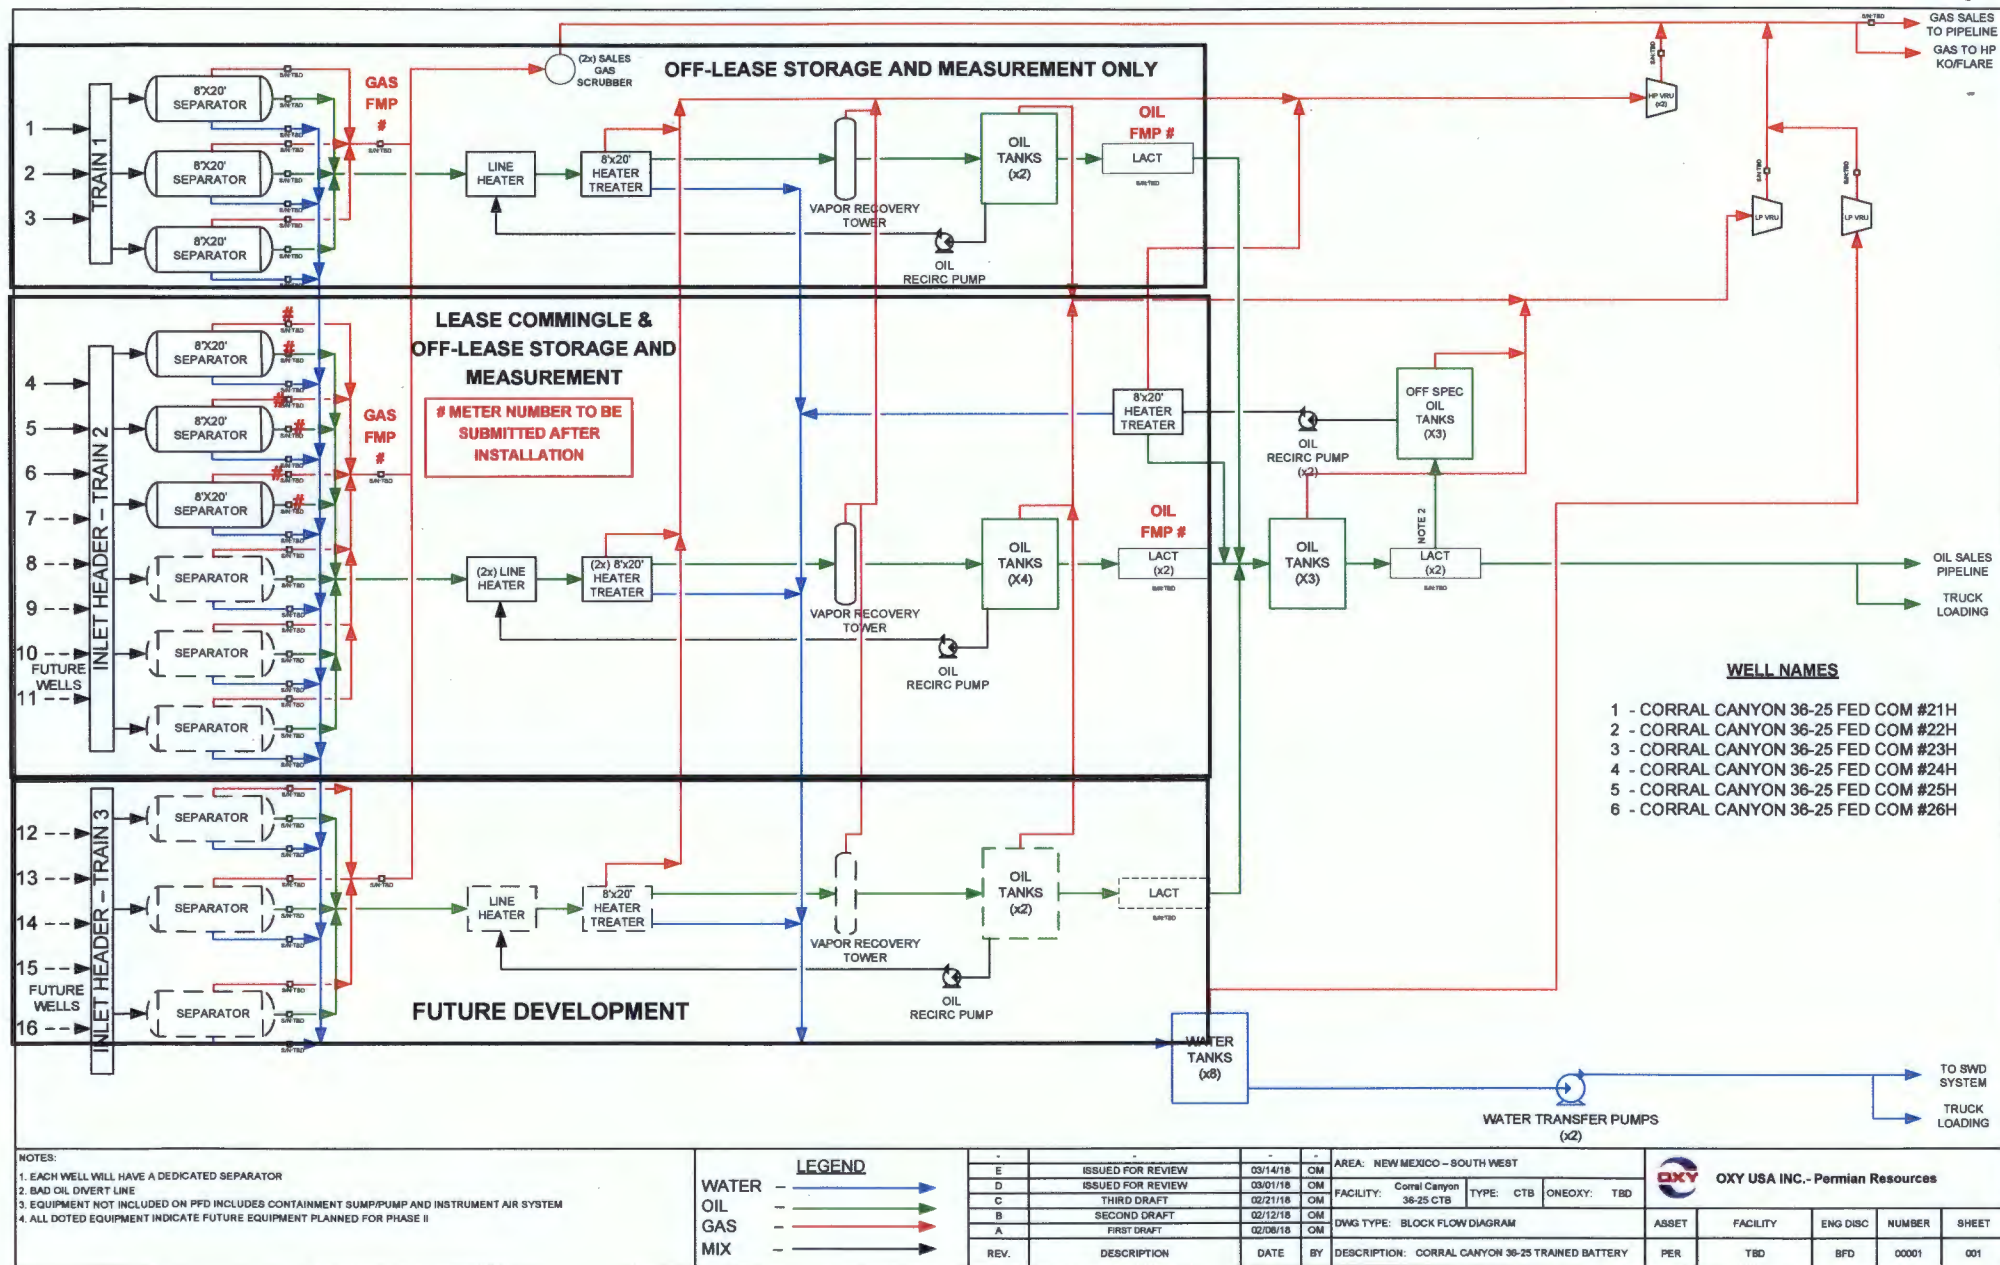

The flow of production is shown in detail on the enclosed facility diagram. Also enclosed is a map detailing the lease and unit boundaries, well and battery locations.

Pursuant to Statewide rule 19.15.12.10(C)(4)(g) OXY USA INC requests the option to include additional pools or leases within the defined parameters set forth in the rule for future additions.

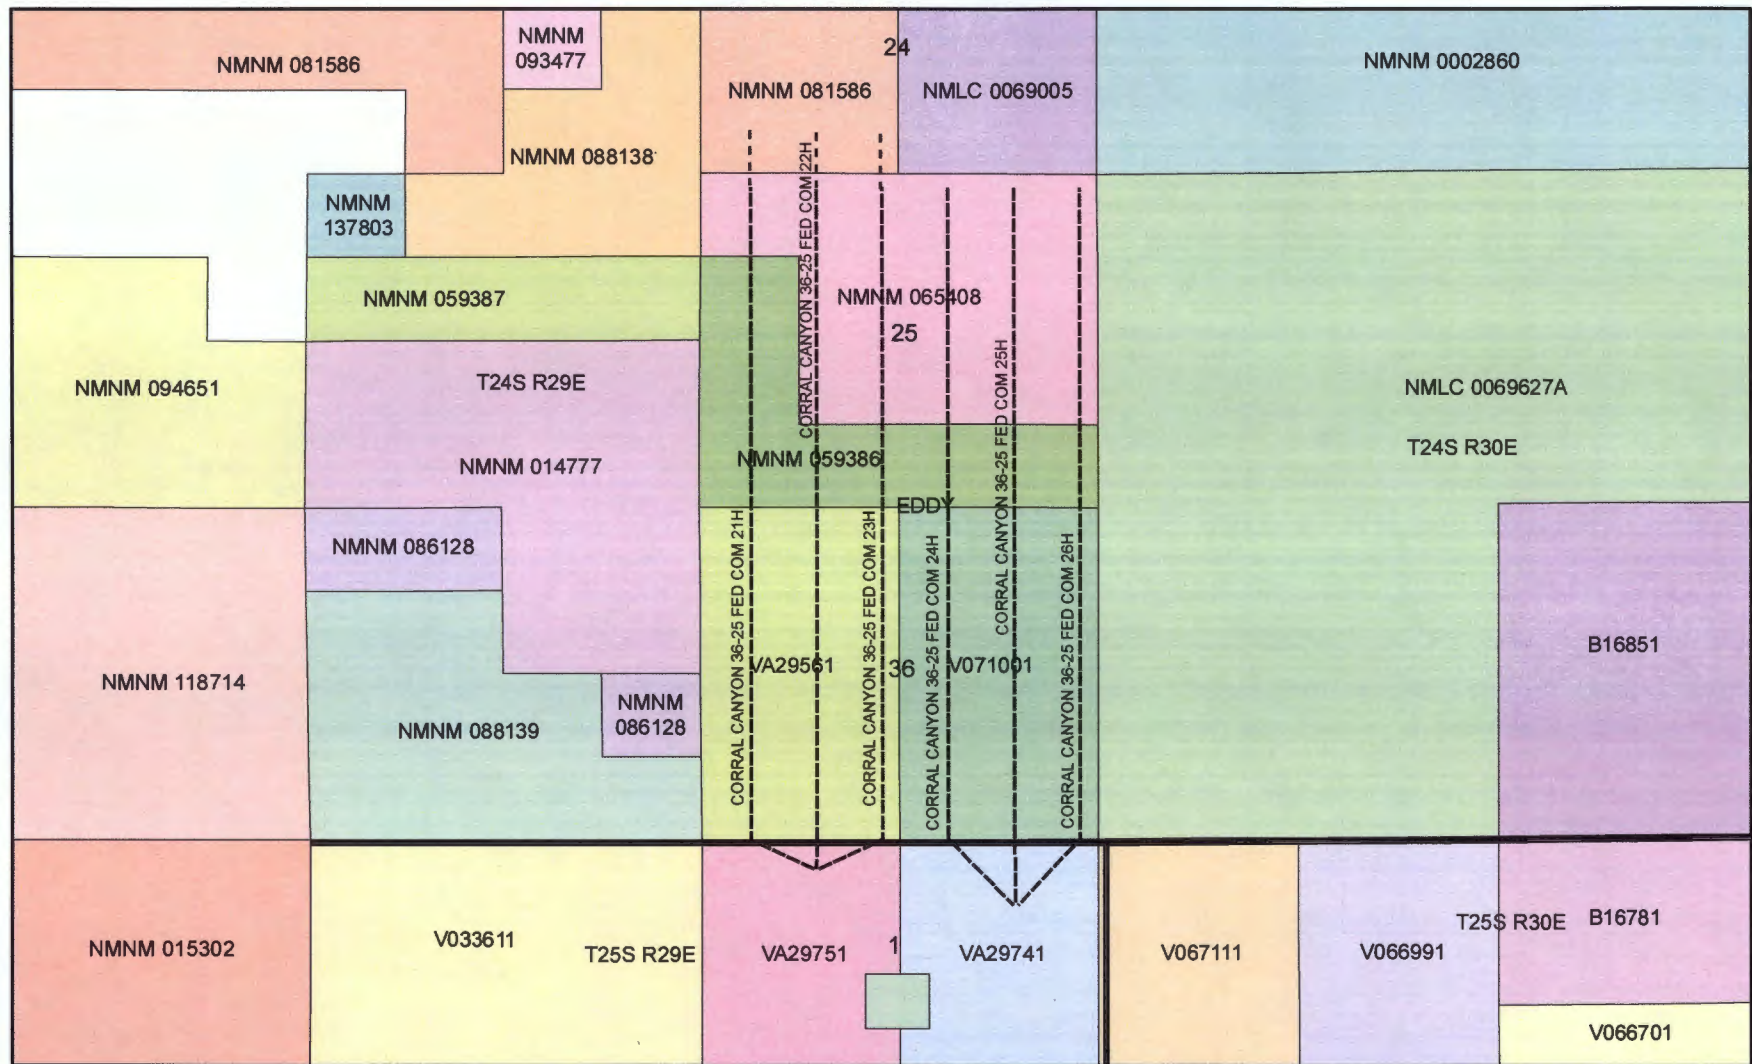

If a well is converted to gas lift in the future, a request for beneficial use will be submitted.

Commingling this production is the most effective means of producing the reserves. The surface commingle application will be submitted separately for approval per NMOCD and BLM regulations.

OXY USA INC understands the requested approval will not constitute the granting of any right-of-way or construction rights not granted by the lease instrument.

Subject: Corral Canyon 36-25 CTB Location

Good afternoon Mike,

Sandra and I have been tied up in meetings all day today, but we were able to locate the facility using the Lat/Long and Earthpoint Survey. It shows the CTB being located in NW/4 of SE/4 of Section 1. According to a Section Plat from online, I think this means Unit J.

Please call either of us if you would like to discuss further.

Respectfully,
Taylor Stillman
