***Estimated Values**

The working interest, royalty interest and overriding royalty interest owners are not identical for the aforementioned wells. Therefore, notice was required.

Process Description:

Production is sent through a 10' x 40' three-phase production separator. Oil production flows through two 8' X 20' heater treaters, then is sent to two vapor recovery towers. It then flows to six oil storage tanks before being pumped through four LACT meters, which serve as the oil FMPs (S/N*), located at the CTB. Oil is then sent to pipeline, downstream of the LACTs. A truck load FMP will be set up at the facility for use as back-up in the event of a LACT meter failure.

Wells will be tested via the testing methodology presented in Hearing Order R-14299, described below.

Wells will be tested daily prior to Range 1 of decline. Wells will be tested at least three times per month once they reach Range 1 of decline. Once wells reach Range 2 of decline, they will be tested at least twice per month, and at least once per month during Range 3 of decline. Production allocated to each well will be based on the aforementioned well tests and the amount of hours a well was operating in a given month.

For testing purposes, the facility will be equipped with four permanent 6' x 20' three-phase test separators. Each test vessel will be equipped with oil turbine meters (S/N*), gas orifice meters (S/N*) and water turbine meters. In addition, the facility is equipped to add up to eight portable 6' X 20' three-phase test separators. Any portable test separator will be equipped with an oil turbine meter (S/N*), gas orifice meter (S/N*) and water turbine meter.

Gas production will be sent from the separators to a sales gas scrubber. It will then flow through an Oxy check meter (S/N*), located at the CTB, which will serve as the gas FMP for the purpose of royalty payment, then sent to sales.

*Meter number to be submitted upon installation. The oil and gas meters will be calibrated on a regular basis per API, NMOCD and BLM specifications.

All produced water will be sent to a third party for water disposal.

Additional Application Components:

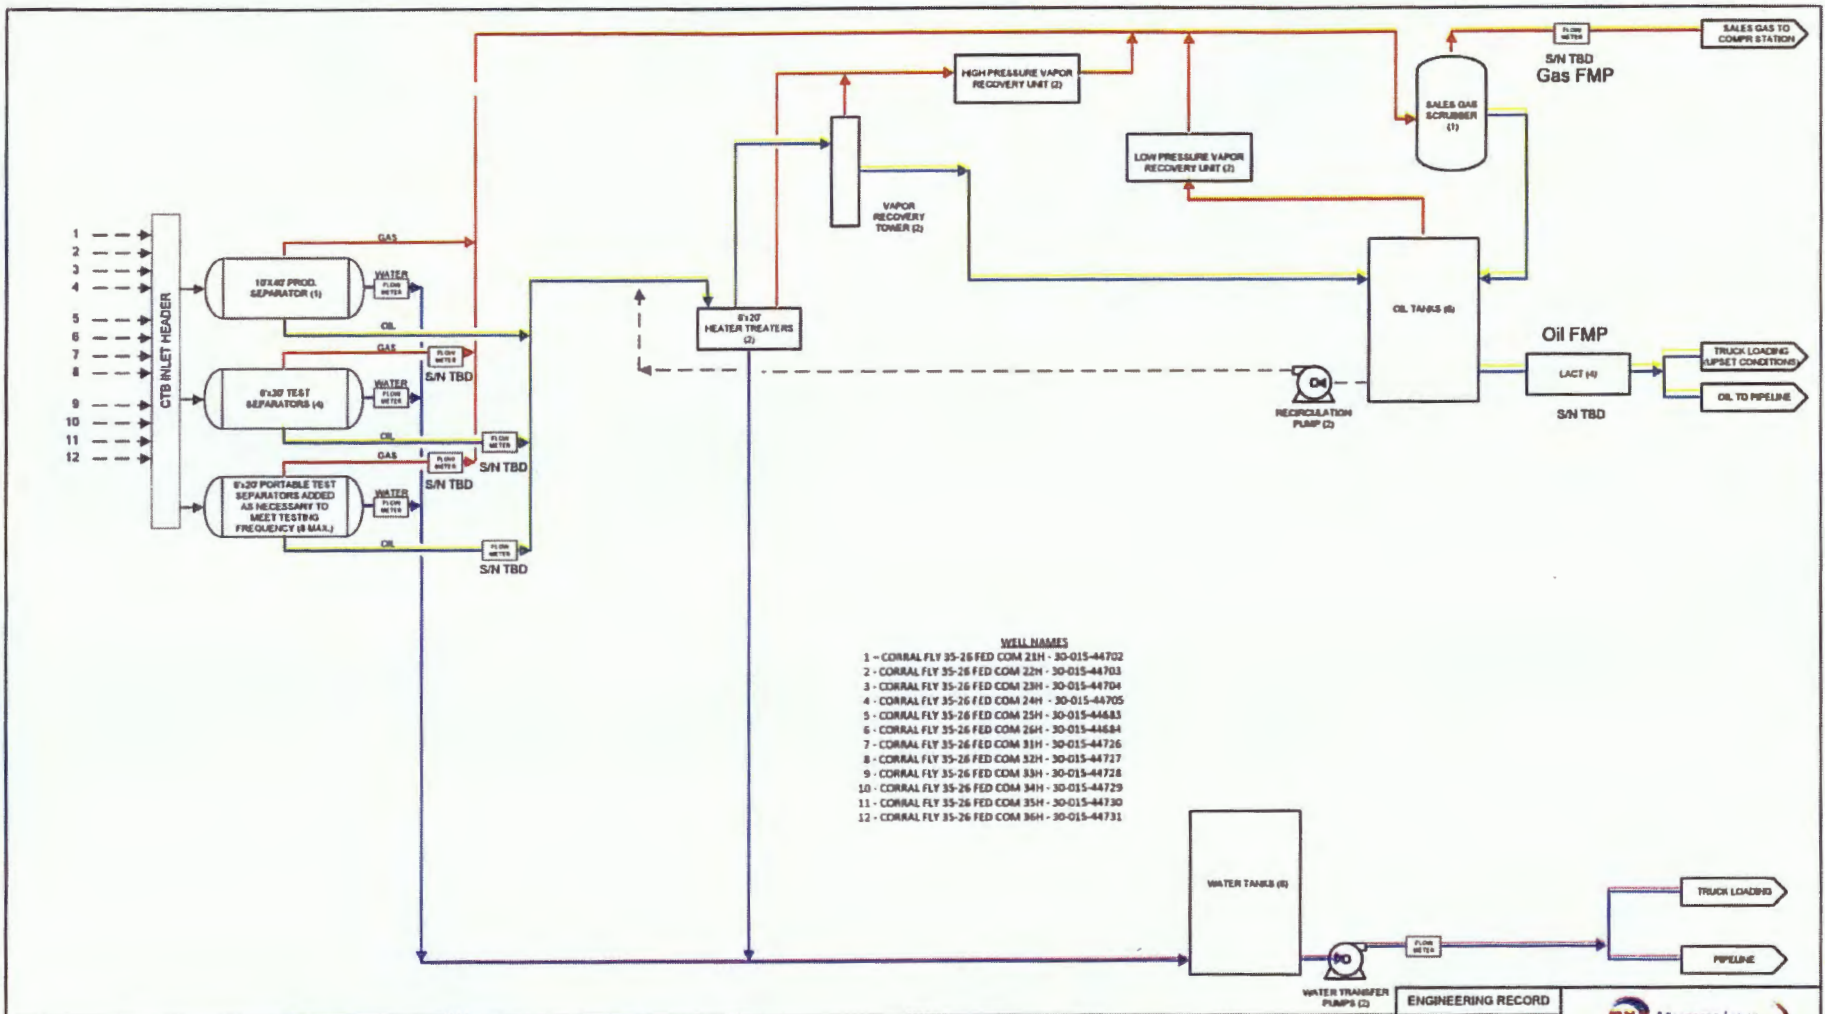

The flow of production is shown in detail on the enclosed facility diagram. Also enclosed is a map detailing the lease boundaries, well and battery locations.

Pursuant to Statewide rule 19.15.12.10(C)(4)(g) OXY USA INC requests the option to include additional pools or leases within the defined parameters set forth in the order for future additions.

If a well is converted to gas lift in the future, a request for beneficial use will be submitted.

Commingling this production is the most effective means of producing the reserves. The surface commingle application will be submitted separately for approval per NMOCD and BLM regulations.

OXY USA INC understands the requested approval will not constitute the granting of any right-of-way or construction rights not granted by the lease instrument. The surface commingle application will be submitted separately for approval per SLO regulations.
