Form C-107-B  
Revised August 1, 2011

**OIL CONSERVATION DIVISION**  
1220 S. St Francis Drive  
Santa Fe, New Mexico 87505

Submit the original  
application to the Santa Fe  
office with one copy to the  
appropriate District Office.

**APPLICATION FOR SURFACE COMMINGLING (DIVERSE OWNERSHIP)**

OPERATOR NAME: BOPCO, LP

OPERATOR ADDRESS: 6401 Holiday Hill Rd, Bldg 5 Midland, TX 79707

APPLICATION TYPE:

☐ Pool Commingling ☐ Lease Commingling ☒ Pool and Lease Commingling ☐ Off-Lease Storage and Measurement (Only if not Surface Commingled)

LEASE TYPE: ☐ Fee ☒ State ☒ Federal

Is this an Amendment to existing Order? ☐ Yes ☒ No If "Yes", please include the appropriate Order No. \_\_\_\_\_

Have the Bureau of Land Management (BLM) and State Land office (SLO) been notified in writing of the proposed commingling

☒ Yes ☐ No

**(A) POOL COMMINGLING**

Please attach sheets with the following information

(1) Pool Names and Codes	Gravities / BTU of Non-Commingled Production	Calculated Gravities / BTU of Commingled Production		Calculated Value of Commingled Production	Volumes
See Attached					

(2) Are any wells producing at top allowables? ☐ Yes ☒ No

(3) Has all interest owners been notified by certified mail of the proposed commingling? ☒ Yes ☐ No.

(4) Measurement type: ☒ Metering ☒ Other (Specify) Well Test

(5) Will commingling decrease the value of production? ☐ Yes ☒ No If "yes", describe why commingling should be approved

**(B) LEASE COMMINGLING**

Please attach sheets with the following information

(1) Pool Name and Code.

(2) Is all production from same source of supply? ☐ Yes ☐ No

(3) Has all interest owners been notified by certified mail of the proposed commingling? ☐ Yes ☐ No

(4) Measurement type: ☐ Metering ☐ Other (Specify) Tank gauging, subtraction (see attached for measurement and allocation)

**(C) POOL and LEASE COMMINGLING**

Please attach sheets with the following information

(1) Complete Sections A and E.

**(D) OFF-LEASE STORAGE and MEASUREMENT**

Please attached sheets with the following information

(1) Is all production from same source of supply? ☐ Yes ☐ No

(2) Include proof of notice to all interest owners.

**(E) ADDITIONAL INFORMATION (for all application types)**

Please attach sheets with the following information

(1) A schematic diagram of facility, including legal location.

(2) A plat with lease boundaries showing all well and facility locations. Include lease numbers if Federal or State lands are involved.

(3) Lease Names, Lease and Well Numbers, and API Numbers.

I hereby certify that the information above is true and complete to the best of my knowledge and belief.

13. Describe Proposed or Completed Operation: Clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recomple horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports must be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompletion in a new interval, a Form 3160-4 must be filed once testing has been completed. Final Abandonment Notices must be filed only after all requirements, including reclamation, have been completed and the operator has determined that the site is ready for final inspection.

BOPCO, LP respectfully submits this sundry notice to commingle oil and gas production at a common tank battery. Oil will be transported to, stored and sold from the Poker Lake Unit 158 Battery via LACT unit into a pipeline. Gas will be transported to this location and sold at same.

Wells associated at this battery are:

Poker Lake Unit 156 30-015-31688

### **Proposal for Poker Lake Unit 158 Federal Battery**

BOPCO, LP is requesting approval for Surface/Pool Commingle and Off-Lease measurement, sales and storage for the wells shown on the attached list.

### **Oil & Gas metering and Allocation:**

The Poker Lake Unit 158 Battery has four (4), 500 bbl oil tanks and two (2) fiberglass produced water tanks on the location. A total of twenty-three (23) wells will utilize two (2) oil tanks at this location as a common tank battery. A twenty-fourth (24<sup>th</sup>) well will utilize the remaining two (2) oil tanks at this location as an isolated tank battery. The Poker Lake Unit 158 Battery sits on the well location for Poker Lake Unit #158, NENE Sec 7 24S-30E

Oil production from twenty-three (23) wells flow from their respective locations to a header located on the East side of the facility. Oil production from Poker Lake Unit #265H is commingled with twenty-two (22) wells in an established PA. Poker Lake Unit #359H will also utilize this battery but will not flow through the header; it will be routed directly through a dedicated metering separator and to dedicated oil tanks. The twenty-three (23) commingled wells' production is routed from the header to one of two test separators or a bulk production train. Production is allocated to each well based on monthly well test. All oil from the twenty-three (23) commingled wells is sold through a LACT meter or by tank gauging (#TBA), and all oil from the #359H well is sold through a dedicated LACT meter (#Z4187) directly into the BOPCO, LP pipeline. LACT meters are proven per 43 CFR Subpart 3174. Both LACT meters will be the designated FMP for oil from their respective sources, at the facility.

Gas production from the wells also flows to this battery, to either a (metered) flare or through a gas "check meter" (#3001531690) located on the tank battery, which is treated as the FMP prior to then selling to Energy Transfer Company (ETC) or Enterprise (ENT). Gas production is allocated via metered testers and commingled prior to the FMP. After separation, the gas flow from the #359H well is routed to an individual Electronic Flow Meter (EFM); gas volume is allocated to the well based on the factor derived from using readings from the allocation test meter (#TBA) and the check meter (#3001531690). Gas production from the remaining twenty-three (23) wells is allocated based on well test using an allocation factor obtained from the EFM test meter (#PLU 158 Test, or #33299015000) and check meter (#3001531690). All EFM gas meters are installed and calibrated per 43 CFR 3175 requirements. The check meter (#3001531690) will be the designated FMP for gas for all wells utilizing this facility.

### **Process and Flow Descriptions, Allocation Method, and Economic Analysis:**

The flow of production is shown in detail on enclosed facility diagram. A map is included with this application outlining lease boundaries, location of wells, facility, and gas sales meter. All wells are located inside the Poker Lake Unit boundaries. The description below details the battery construction utilizing two (2) FMPs for oil production (an FMP Poker Lake Unit #359H well and an FMP for commingled oil production or the 22 PA wells shared with the Poker Lake Unit #265H) and one (1) FMP for commingled gas production.

The shared tank battery is located on the South side of the well pad for the Poker Lake Unit #158 located in the NENE of Sec 7 24S-30E on Federal lease NMLC068545. The production from the wells enters from the East side of the facility. This battery contains one well that will have a dedicated metering separator due to production originating from a different formation. The well with a dedicated metering separator is the Poker Lake Unit #359H (a proposed well to be drilled and completed in the Bone Spring formation).

The production stream from well #359H enters the location on the Northeast end and is routed directly to a three-phase vertical separator and then through an oil surveillance test meter (#TBA). From the meter, oil flows to a dedicated heater treater and then to the two (2) northernmost steel, storage tanks (#7032290001 & #7032290003). These tanks are isolated and dedicated to oil production from well #359H and will not share storage of production from the other wells. From the tanks, oil is sold through LACT meter #Z3918 directly into the BOPCO PLU pipeline.

Gas from the dedicated three-phase separator flows through an EFM (#TBA) allocation test meter, into a common gas line and then either to a metered flare (#3120004600) or to the common check meter (#3001531690) and on to sales. Water is also metered at the separator using a turbine meter.

The remaining wells are routed from the header to one of two (2) three-phase test separators (Primary or Secondary) or a bulk production two-phase separator and free-water knockout. The facility is configured so that one well will be in test at all times with the ability to have two wells being in test simultaneously. The combined production stream from the well which is on test, flows to a three-phase test separator, where gas is discharged into a gas line and the oil flows through a NuFlow turbine allocation test meter (Primary #3740-68; Secondary #99468). The oil then goes into a common production line where it is routed through a main heater treater then to the two (2) southernmost steel oil tanks (7032290000 & 7032290002), isolated from the #359H oil tanks. The small amount of gas recovered from the treater is commingled with the #359H treater gas, and is either compressed for sales or sent to the metered flare (#3120004600). The compressed treater gas flows into the main gas line then through the check meter (#3001531690). Each well is placed in test phase at least once a month for 24 hours.

Gas from the test separators is routed through an Electronic Flow Meter (EFM) gas allocation test meter (Primary #PLU 158 Test, Secondary #33299015000). At this point, the gas is routed into a common gas line where it is joined by the gas production from the #359H well, upstream of the EFM metered flare (#3120004600) or through the EFM check meter (#3001531690) and on to sales. Check meter #3001531690 will be the designated FMP for all gas at this facility. The allocation factors are obtained from the test meter reading for the well in test, the meter reading for well # 359H and the volume recorded on the check meter (#3001531690). With the exception of well #359H which is continuously metered, each well is placed in test phase at least once a month for 24 hours.

The Poker Lake Unit #265H well (Bone Spring formation, NMNM71016X) will continue to share facilities with 22 wells (all Delaware formation, all NMNM71016G) on the grounds that well #265H is an "economically marginal property". To remove the #265H well would require construction of a separate battery. A second battery would require full buildout of gas, oil, and water handling equipment designed for low production volumes, including earthwork, inlet separator and heater treater, oil and water tanks, gas sales meter, recycle pump, vapor recovery unit, high and low pressure flares, LACT if desired, and associated piping and valving.

The total estimate for this second battery to service a single well is \$770,000, which excludes any gathering cost to connect gas, oil, and water pipelines to a new location and provide electricity. The total estimated net present value of the oil royalty payment is \$71,581. The total estimated net present value (NPV) of the gas royalty payment is \$112,877. A discount rate of 10% has been applied to determine the NPV royalty value at an economic cutoff of 3 bopd (or ~150 bopm).

Attached Economics provide a revenue and royalty comparison for the #265H well based on an estimated decline curve and current commodity pricing. Note that there is also an expected increase in operating expenses related to increased equipment maintenance and electricity not considered within the royalty calculation as well as potential for higher emissions due to extra tanks and a heater treater and additional surface disturbance.

Because of the high capital cost to "uncommingle" well #265H relative to the estimated federal royalties, BOPCO/XTO requests approval to continue to commingle oil and gas (including sales gas, flare gas, and lease use gas) from the #265H with the 22 wells in the NMNM71016G PA at the Poker Lake Unit 158 Battery. This is consistent with 43 CFR Section 3173.14, which states that the BLM may approve commingling if the lease "meets the definition of an economically marginal property." 3173.1 states "A lease, unit PA, or CA can also be considered economically marginal if the operator demonstrates that its royalty net present value (RNPV)...is less than the capital cost of purchasing and installing [the equipment necessary to uncommingle]".

Well #265H thus enters at the header and is handled like any of the 22 PA wells, being tested monthly via the Primary or Secondary metered test separators. Oil and gas production is allocated from the corresponding test meter and the LACT or gas check meter, respectively.

For the wells not on test, production is routed from the header to a main two-phase separator then through a free-water knockout. Oil from the knockout flows through a heater treater, and then on to the 2 southernmost steel storage tanks.

All oil from the well #359H tanks is sold through a LACT meter (#Z3918) directly into the BOPCO PLU pipeline. All oil from the remaining tanks is sold through a LACT meter (#TBA), for truck hauling or directly to BOPCO PLU pipeline.

The facility is equipped with two (2) metered Vapor Recovery Units (meter #PLU 158VRU) to capture tank vapors. Gas recorded on the EFM is allocated to each well based on that wells allocated oil production.

### **Summary:**

The commingling of production is in the interest of conservation and minimizing waste and will result in the most effective and economic means to maximize the ultimate economic recovery of the reserves in place from the affected wells.

Commingling of production from well #265H, an economically marginal property, with the 22 PA wells is necessary for the ultimate recovery of minerals. Although well #265H was deemed as commercial upon initial completion, the production of hydrocarbons from the well is not sufficient to support separate production facilities. To the economic limit of 3 BOPD, it is expected that well #265H will produce a total of 12,934 bbls oil and 323,340 mcf gas, and thus commingling the production of this well is necessary for the complete recovery of minerals in place. Commingling of production will allow this well to continue production.

The proposed commingling and allocation will not result in reduced royalty or improper measurement of production. The proposed commingling will reduce the surface facility footprint and overall emissions.

BOPCO, L.P. understands the requested approval will not constitute the granting of any right-of-way or construction rights not granted by the lease instrument.

Working, royalty, and overriding interest owners will be notified of this proposal via certified mail.

The BLM and NMOCD will be notified of any future changes in the facilities.

Crude oil for Poker Lake is sold based on the aggregate API of 45 degrees at the CDP. Oil that is low sulphur content with a API gravity less than 45 is sold as sweet with no deduction.

Price for MMBTU is the combined BTU value at the sales meter. There are no deductions based on quality or sulfur content. Given the similarity of BTU contents, there should be no significant price difference or sensitivity to allocation factors.

RE: Application for Surface Commingling, Off Lease Sales, Storage and Measurement  
Multiple Wells, Multiple Pools  
Poker Lake Unit  
Eddy County, New Mexico

Dear Interest Owner:

This letter and attached documents are to notify you, as an interest owner, that XTO Energy (as agent for BOPCO, LP) is petitioning the Bureau of Land Management and New Mexico Oil Conservation Division to grant permission to commingle the production (on the surface) from your well. Approval to measure, store and sell the production, at a point outside the lease boundary is also included in the request.

The complete application contains several pages; included with this notice is information to identify the wells, their location and the location of the facility. If you would like a complete copy of the application or have any questions please feel free to contact me at 432-221-7379 or by email at [tracie\\_cherry@xtoenergy.com](mailto:tracie_cherry@xtoenergy.com).

Any objections or requests for a hearing must be filed with the Oil Conservation Division, 1220 South St Frances Dr., Santa Fe, New Mexico 87505m within 20 days of this letter's date.

Sincerely,

COPY

Tracie J Cherry
