7	Bandit 29 State Com #507H	D-29-24S-33E	30-025-44953	96682 / Triste Draw; Bone Spring East	Drilling

This CTB facility shall be referred to at the Bandit 29 State Com CTB.

LEASEHOLD:

We plan to surface commingle production from the following leases:

1. State Lease LG-5547-5 covers 640.00 acres, being All of Section 29, Township 24 South, Range 33 East, N.M.P.M., Lea County, New Mexico.
2. State Lease V0-7323-1 covers 320.00 acres, being the E/2 of Section 32, Township 24 South, Range 33 East, N.M.P.M., Lea County, New Mexico.
3. State Lease V0-7302-1 covers 320.00 acres, being the E/2 of Section 32, Township 24 South, Range 33 East, N.M.P.M., Lea County, New Mexico.

The central tank battery for the aforementioned wells will be located entirely within the boundary of State Lease LG-5547-5.

PROCESS AND FLOW DESCRIPTIONS:

The production from each well will flow into a dedicated 3-phase separator. The production stream will be separated into 3 independent streams (gas, oil, and water) by the separator and each stream will be measured individually after it exits the separator.

The gas will be measured using a senior orifice meter and used to allocate total volume measured at the facility check meter, high pressure flare meter, and low pressure flare meter.

- Bandit 29 State Com #501H gas allocation meter is an Emerson orifice meter (S/N 67517001)
- Bandit 29 State Com #502H gas allocation meter is an Emerson orifice meter (S/N 67517002)
- Bandit 29 State Com #503H gas allocation meter is an Emerson orifice meter (S/N 67517003)
- Bandit 29 State Com #504Y gas allocation meter is an Emerson orifice meter (S/N 67517004)
- Bandit 29 State Com #505H gas allocation meter is an Emerson orifice meter (S/N *11111111)
- Bandit 29 State Com #506H gas allocation meter is an Emerson orifice meter (S/N *11111111)
- Bandit 29 State Com #507H gas allocation meter is an Emerson orifice meter (S/N *11111111)

The oil from the separators will be measured using a Coriolis meter.

- Bandit 29 State Com #501H oil allocation meter is a FMC Coriolis meter (S/N 10-74972)
- Bandit 29 State Com #502H oil allocation meter is a FMC Coriolis meter (S/N 10-74684)
- Bandit 29 State Com #503H oil allocation meter is a FMC Coriolis meter (S/N 10-74778)
- Bandit 29 State Com #504Y oil allocation meter is a FMC Coriolis meter (S/N 10-75207)
- Bandit 29 State Com #505H oil allocation meter is a FMC Coriolis meter (S/N *11-11111)
- Bandit 29 State Com #506H oil allocation meter is a FMC Coriolis meter (S/N *11-11111)
- Bandit 29 State Com #507H oil allocation meter is a FMC Coriolis meter (S/N *11-11111)

The water will be measured using a vortex meter. The water from each separator is combined in a common header and flows into four 400 barrel coated steel tanks. Guided wave radar is used to measure water volumes in these tanks. The oil from each separator will be combined into a common header and flow into a heated horizontal separator (HHS) to aid separation of water entrained in the oil. Water from the heated separator flows into the common water header connected to the four 400 barrel water tanks. The water is then pumped and/or trucked to a salt water disposal well. The oil from the heated separator flows through a vapor recovery tower (VRT) where gas is allowed to breakout at a lower pressure, and then the oil flows into eight 400 barrel coated steel tanks. Guided wave radar is used to measure water and oil volumes in these tanks. Oil is pumped out of the tanks through a Coriolis meter into a truck or a pipeline. Every tank utilizes a guided wave radar to determine the volume of product in each. After the gas from each separator is measured it is combined into a common header. The gas from the heated separator also flows into this header. The gas flows through the header to a custody transfer orifice meter (#67517051) that serves as our lease production meter. If the pipeline is experiencing problems and cannot take any gas, the gas will flow through the high pressure flare meter (#67517056) to the flare. If an individual well needed to be flared for any operation reason it will be manually routed through the individual well flare meter (#67517057) to the flare. The overhead gas from the vapor recovery tower is compressed by a vapor recovery compressor and then measured by a custody transfer Emerson orifice meter (#67517086). The gas from the vapor recovery system combines with the gas from the lease production meter and flows into our gas gathering pipeline system.

*Meter numbers will be provided upon installation of meters and completion of the facility.

ADDITIONA INFORMATION

Re: Surface Pool/Lease Commingling Application
Lea County, New Mexico

To whom it may concern:

EOG Resources, Inc. and its subsidiaries EOG Y Resources, Inc, EOG A Resources, Inc., EOG M Resources, Inc. and EOG Resources Assets LLC have matters from time to time before New Mexico Oil Conservation Division (NMOCD). When one of these entities is the proponent of an application for surface commingling, bottom hole commingling, or non-standard location to the NMOCD, the other entities waive the notice requirements of the NMOCD Rules for that application. If you have any questions, please contact us.
