Blake,

I finally found the time to complete a technical review of the Linley State SWD #1 application, so now I can give a better status update. After the review the additional information the Division will need to make a determination are:

- Plugging details for the M&M St 001 well (API: 3000560522), along with the construction information, and date drilled, for the other AOR wells.
- Clarification on Notice:
 - I see that Marathon, MEC Petroleum, and MAC were noticed, but the information provided does not indicate that those parties needed to be noticed
 - Chalfant was listed as a lessee in the AOR, but was not noticed

Please provide information to clarify these two issues and the Division will be able to proceed with the application.

Good Morning Dylan,

I was just wanting to check in on this Linley State SWD #1 permit application and see if there is any kind of status update you might be able to provide. We are just trying to get a general feel on when we may be able to drill this well and the accompanying horizontal producer for our budget and yearly plan. Please let me know if there is anything you can share.

Thank you,

Blake Morphew

Good morning Blake,

Thanks for sending along this information. I will add the documents to the record and incorporate the information into the technical review. I'll be sure to reach out if any additional questions arise.

Subject: [EXT] Linley State SWD #1-Log & Map Exhibits

Good Morning Dylan,

Brian asked me to send the exhibits over that we discussed in our meeting with the NMSLO. The main thing that was discussed in this meeting was the distance and rock quality between the proposed injection interval and the landing zone/pay for horizontal development. There is +/- 600' vertical distance between these two points with several hundred feet of extremely tight dolomite that will provide a sufficient barrier to prevent contamination of a productive zone. Also of note is that there has been no commercial hydrocarbon production in this area to date in the proposed injection interval. Our geology indicates that for our development acreage, any San Andres zone below the very top of P-3 will produce extremely high volumes of water so we do not consider these lower SA zones to ever be a target. Please let me know if you have any questions or would like to see anything else.

Thank you,

Blake Morpew

ADMINISTRATIVE APPLICATION CHECKLIST

THIS CHECKLIST IS MANDATORY FOR ALL ADMINISTRATIVE APPLICATIONS FOR EXCEPTIONS TO DIVISION RULES AND
 REGULATIONS WHICH REQUIRE PROCESSING AT THE DIVISION LEVEL IN SANTA FE

Applicant: BAM Permian Operating, LLC **OGRID Number:** 328565
Well Name: Linley State SWD I **API:** 30-005-
Pool: SWD; San Andres - Glorieta **Pool Code:** 96127

**SUBMIT ACCURATE AND COMPLETE INFORMATION REQUIRED TO PROCESS THE TYPE OF APPLICATION
 INDICATED BELOW**

- 1) **TYPE OF APPLICATION:** Check those which apply for [A]
 A. Location – Spacing Unit – Simultaneous Dedication
☐ NSL ☐ NSP (PROJECT AREA) ☐ NSP (PRORATION UNIT) ☐ SD
 B. Check one only for [I] or [II]
 [I] Commingling – Storage – Measurement
☐ DHC ☐ CTB ☐ PLC ☐ PC ☐ OLS ☐ OLM
 [II] Injection – Disposal – Pressure Increase – Enhanced Oil Recovery
☐ WFX ☐ PMX ☒ SWD ☐ IPI ☐ EOR ☐ PPR

- 2) **NOTIFICATION REQUIRED TO:** Check those which apply.
 A. ☒ Offset operators or lease holders
 B. ☐ Royalty, overriding royalty owners, revenue owners
 C. ☒ Application requires published notice
 D. ☒ Notification and/or concurrent approval by SLO
 E. ☒ Notification and/or concurrent approval by BLM
 F. ☒ Surface owner
 G. ☒ For all of the above, proof of notification or publication is attached, and/or,
 H. ☐ No notice required

FOR OCD ONLY

- ☐ Notice Complete
☐ Application
 Content
 Complete

- 3) **CERTIFICATION:** I hereby certify that the information submitted with this application for administrative approval is **accurate** and **complete** to the best of my knowledge. I also understand that **no action** will be taken on this application until the required information and notifications are submitted to the Division.

Note: Statement must be completed by an individual with managerial and/or supervisory capacity.

APPLICATION FOR AUTHORIZATION TO INJECT

- I. PURPOSE: _____ Secondary Recovery _____ Pressure Maintenance XXX Disposal _____ Storage
Application qualifies for administrative approval? XXX Yes _____ No
- II. OPERATOR: BAM PERMIAN OPERATING, LLC
ADDRESS: 4416 BRIARWOOD AVE., SUITE 110, PMB 53, MIDLAND, TX 79707
CONTACT PARTY: BRIAN WOOD (PERMITS WEST, INC.) PHONE: 505 466-8120
- III. WELL DATA: Complete the data required on the reverse side of this form for each well proposed for injection.
Additional sheets may be attached if necessary.
- IV. Is this an expansion of an existing project? _____ Yes XXX No
If yes, give the Division order number authorizing the project: _____
- V. Attach a map that identifies all wells and leases within two miles of any proposed injection well with a one-half mile radius circle drawn around each proposed injection well. This circle identifies the well's area of review.
- VI. Attach a tabulation of data on all wells of public record within the area of review which penetrate the proposed injection zone. Such data shall include a description of each well's type, construction, date drilled, location, depth, record of completion, and a schematic of any plugged well illustrating all plugging detail.
- VII. Attach data on the proposed operation, including: **LINLEY STATE SWD 1**
1. Proposed average and maximum daily rate and volume of fluids to be injected;
 2. Whether the system is open or closed;
 3. Proposed average and maximum injection pressure;
 4. Sources and an appropriate analysis of injection fluid and compatibility with the receiving formation if other than reinjected produced water; and,
 5. If injection is for disposal purposes into a zone not productive of oil or gas at or within one mile of the proposed well, attach a chemical analysis of the disposal zone formation water (may be measured or inferred from existing literature, studies, nearby wells, etc.).
- *VIII. Attach appropriate geologic data on the injection zone including appropriate lithologic detail, geologic name, thickness, and depth. Give the geologic name, and depth to bottom of all underground sources of drinking water (aquifers containing waters with total dissolved solids concentrations of 10,000 mg/l or less) overlying the proposed injection zone as well as any such sources known to be immediately underlying the injection interval.
- IX. Describe the proposed stimulation program, if any.
- *X. Attach appropriate logging and test data on the well. (If well logs have been filed with the Division, they need not be resubmitted).
- *XI. Attach a chemical analysis of fresh water from two or more fresh water wells (if available and producing) within one mile of any injection or disposal well showing location of wells and dates samples were taken.
- XII. Applicants for disposal wells must make an affirmative statement that they have examined available geologic and engineering data and find no evidence of open faults or any other hydrologic connection between the disposal zone and any underground sources of drinking water.
- XIII. Applicants must complete the "Proof of Notice" section on the reverse side of this form.
- XIV. Certification: I hereby certify that the information submitted with this application is true and correct to the best of my knowledge and belief.
- NAME: BRIAN WOOD  TITLE: CONSULTANT
SIGNATURE: _____ DATE: AUG. 22, 2019
E-MAIL ADDRESS: brian@permitswest.com
- * If the information required under Sections VI, VIII, X, and XI above has been previously submitted, it need not be resubmitted. Please show the date and circumstances of the earlier submittal: _____

III. WELL DATA

- A. The following well data must be submitted for each injection well covered by this application. The data must be both in tabular and schematic form and shall include:

- (1) Lease name; Well No.; Location by Section, Township and Range; and footage location within the section.
- (2) Each casing string used with its size, setting depth, sacks of cement used, hole size, top of cement, and how such top was determined.
- (3) A description of the tubing to be used including its size, lining material, and setting depth.
- (4) The name, model, and setting depth of the packer used or a description of any other seal system or assembly used.

Division District Offices have supplies of Well Data Sheets which may be used or which may be used as models for this purpose. Applicants for several identical wells may submit a "typical data sheet" rather than submitting the data for each well.

- B. The following must be submitted for each injection well covered by this application. All items must be addressed for the initial well. Responses for additional wells need be shown only when different. Information shown on schematics need not be repeated.

- (1) The name of the injection formation and, if applicable, the field or pool name.
- (2) The injection interval and whether it is perforated or open-hole.
- (3) State if the well was drilled for injection or, if not, the original purpose of the well.
- (4) Give the depths of any other perforated intervals and detail on the sacks of cement or bridge plugs used to seal off such perforations.
- (5) Give the depth to and the name of the next higher and next lower oil or gas zone in the area of the well, if any.

XIV. PROOF OF NOTICE

All applicants must furnish proof that a copy of the application has been furnished, by certified or registered mail, to the owner of the surface of the land on which the well is to be located and to each leasehold operator within one-half mile of the well location.

Where an application is subject to administrative approval, a proof of publication must be submitted. Such proof shall consist of a copy of the legal advertisement which was published in the county in which the well is located. The contents of such advertisement must include:

- (1) The name, address, phone number, and contact party for the applicant;
- (2) The intended purpose of the injection well; with the exact location of single wells or the Section, Township, and Range location of multiple wells;
- (3) The formation name and depth with expected maximum injection rates and pressures; and,
- (4) A notation that interested parties must file objections or requests for hearing with the Oil Conservation Division, 1220 South St. Francis Dr., Santa Fe, New Mexico 87505, within 15 days.

NO ACTION WILL BE TAKEN ON THE APPLICATION UNTIL PROPER PROOF OF NOTICE HAS BEEN SUBMITTED.

NOTICE: Surface owners or offset operators must file any objections or requests for hearing of administrative applications within 15 days from the date this application was mailed to them.

Additional Data

1. Is this a new well drilled for injection? XXX Yes No

If no, for what purpose was the well originally drilled? _____

2. Name of the Injection Formation: LOWER SAN ANDRES & GLORIETA

3. Name of Field or Pool (if applicable): SWD; SAN ANDRES - GLORIETA (96127)

4. Has the well ever been perforated in any other zone(s)? List all such perforated intervals and give plugging detail, i.e. sacks of cement or plug(s) used. NO

5. Give the name and depths of any oil or gas zones underlying or overlying the proposed injection zone in this area: _____

OVER: GRAYBURG (2100'), UPPER SAN ANDRES (3100')

UNDER: ABO (6000'), WOLFCAMP (7100')

I. Goal is to drill a 5200' deep saltwater disposal well. Proposed disposal interval will be 3750' – 5200' in the SWD; San Andres-Glorieta (96127). This will be the lower San Andres.

II. Operator: BAM Permian Operating, LLC (OGRID 328565)
Operator phone number: (432) 242-8851
Operator address: 4416 Briarwood Ave. Suite 110 PMB 53, Midland TX 79707
Contact for Application: Brian Wood (Permits West, Inc.)
Phone: (505) 466-8120

III. A. (1) Lease type: NMSLO Lease name: Linley State
Lease Number: VC-0379-0000 Lease Size: 320.00 acres
Lease Area: W2 32-15s-29e Closest Lease Line: 201'
Well name & number: Linley State SWD 1
Well location: 201' FSL & 999' FWL Sec. 32, T. 15 S., R. 29 E.

A. (2) Surface casing (13.375", 48#, H-40, ST&C) will be set at 350' in a 17.5" hole and cemented to GL with 480 sacks. Will verify TOC by circulation.

Intermediate casing (9.625", 36#, J-55, LT&C) will be set at 1500' in a 12.25" hole and cemented to GL with 410 sacks. Will verify TOC by circulation, or temperature survey if needed.

Production casing (7", 26#, J-55, LT&C) will be set at 5200' in an 8.75" hole and cemented to GL in 2 stages (tool at \approx 2750') with 720 sacks. Will verify TOC by circulation, or CBL if needed.

A. (3) Tubing will be IPC, 3.5", 9.3#, J-55. Setting depth will be \geq 3650'. (Disposal interval will be 3750' to 5200'.)

A. (4) A 7" x 3.5" Arrowset I-X nickel coated or stainless-steel packer will be set at \geq 3650'. (Disposal interval will be 3750' to 5200'.)

- B. (1) Disposal zone will be the SWD; San Andres-Glorieta (96127).
- B. (2) Disposal interval will be 3750' to 5200'.
- B. (3) Well will be drilled as a saltwater disposal well.
- B. (4) Well was has not yet been drilled.
- B. (5) No production has been found above the San Andres (2450') within the ½ mile area of review. Grayburg was tested in 30-005-60522, but was P&A without producing from the Grayburg.

Upper San Andres may be productive. BAM has an approved APD (30-005-64337) for a well 100' west in the Round Tank; San Andres (52770). TVD will be 3150'. This will be 600' above the top of the disposal interval.

Two zones (Abo and Wolfcamp) in the area of review produce below the Glorieta.

IV. This is not an expansion of an existing injection project. It is disposal only.

V. Exhibit B shows and tabulates 3 existing wells (2 producers + 1 P&A) within a half-mile. Exhibit C shows 72 existing wells (33 oil or gas wells + 39 P & A wells) within a 2-mile radius.

Exhibit D shows and tabulates all leases and lessors (BLM & NMSLO) within a half-mile. Exhibit E shows all leases and lessors (BLM, fee, & NMSLO) within a two-mile radius.

VI. Four wells are, or will be, within a half-mile. Three have, or will, penetrated the San Andres - Glorieta disposal zone (3750' – 5200'). Construction details of the penetrators are in Exhibit F. None of the penetrators are P&A.

- VII. 1. Average injection rate will be $\approx 4,000$ bwpd.
Maximum injection rate will be 5,000 bwpd.
2. System will be open and closed.
3. Average injection pressure will be ≈ 700 psi. Maximum injection pressure will be 750 psi ($= 0.2$ psi/foot $\times 3750'$ (highest perforation)).
4. Compatibility is not expected to be an issue. Only produced water will be reinjected. No problems have been reported from disposing into the closest (24 miles east-southeast) SWD; San Andres - Glorieta well (30-025-31110). A minimum of 2,265,043 barrels have been disposed in the last 25 years.
Source of the disposal water will initially be San Andres produced water from BAM wells. However, other produced water (e. g, Wolfcamp) could be accepted. Data from the NM Produced Water Quality Database v.2 are in Exhibit G.
5. The proposed disposal zone (lower San Andres - Glorieta) has not been found productive within a mile. Closest San Andres producer (30-005-64310) is 4419' northeast. It produces from the upper San Andres. TVD of that San Andres well is 3217' (vs. top of the proposed disposal zone at 3750'). Closest Glorieta producer (30-015-38140) is 5-3/4 miles south-southwest. San Andres and Glorieta water analyses are in Exhibit G.

VIII. San Andres consists of carbonates, anhydrite, and shale. Glorieta is mainly sandstone. Closest possible underground source of drinking water above the proposed disposal interval are the red beds in the top $\approx 225'$ of the well.

State Engineer records (Exhibit H) show no water wells within 4-miles. No water wells within a mile were found during an August 20-21, 2019 field inspection which found no water wells. No underground source of drinking water is below the proposed disposal interval.

Estimated formation tops are:

Red beds = 0'
Yates = 970'
Seven Rivers = 1165'
Queen = 1777'
San Andres = 2450'
disposal interval = 3750' - 5200'
Glorieta = 3942'
TD = 5200'

There will be $\approx 3525'$ of vertical separation and multiple layers of anhydrite, salt, and shale between the bottom of the only likely underground water source (red beds) and the top of the San Andres.

IX. Well will be treated with 20,000 gallons of 15% HCl to clean out scale or fill.

X. GR/ND/Triple Combo log will be run. CBL log will be run if cement fails to circulate.

XI. Based on an August 20-21, 2019 field inspection and a review of the State Engineer's records, no water wells are within a one-mile radius. See Exhibit H.

XII. BAM Permian Operating, LLC is not aware (Exhibit I) of any geologic or engineering data that may indicate the San Andres or Glorieta is in hydrologic connection with any underground sources of water. Anhydrite, salt, and shale strata prevent that. There are 115 active San Andres SWD wells and 12 active Glorieta SWD wells in New Mexico. Closest Quaternary fault is 70 miles southwest (Exhibit I).

XIII. A legal ad (see Exhibit J) was published on May 19, 2019 in the Artesia paper and on May 22, 2019 in the Roswell paper. Notice (this application) has been sent (Exhibit K) to the surface owner (NMSLO), government lessors (BLM & NMSLO), government lessees of record (Chalfant, Dakota, EOG, Murchison), operating rights holders (MEC), and well operators regardless of depth (EOG, Mack, Murchison).

GENERAL INFORMATION

Linley State SWD #1 is located in the SW $\frac{1}{4}$, section 32, T15S, R29E, about 21 miles northeast of Artesia, NM in the Permian Basin. BAM Permian Operating, LLC proposes the injection zone to be within the Lower San Andres/Glorieta formations through a cased hole from 3,750'-5,200' below ground surface. This report assesses any potential concerns relating to induced seismicity along deep penetrating Precambrian faults or the connection between the injection zone and known underground potable water sources.

SEISMIC RISK ASSESSMENT

Historical Seismicity

Searching the USGS earthquake catalog resulted in no (0) earthquakes above a magnitude 2.5 within 6 miles (9.7 km) of the proposed disposal site since 1970 (Fig 1). According to this dataset, the nearest historical earthquake occurred in 2003 about 33 miles (~54 km) southwest and had a magnitude of 3.6.

Basement Faults and Subsurface Conditions

A structure contour map (Fig. 1) of the Precambrian basement shows the Linley State SWD #1 is approximately 8 miles from the nearest basement-penetrating fault inferred by Ewing (1990) and about 14 miles from the nearest surface fault.

Snee and Zoback (2018) state, "In the western part of Eddy County, New Mexico, S_{Hmax} is ~north-south (consistent with the state of stress in the Rio Grande Rift; Zoback and Zoback, 1980) but rotates to ~east-northeast-west-southwest in southern Lea County, New Mexico, and the northernmost parts of Culberson and Reeves counties, Texas." Around the Linley State SWD #1 site, Snee and Zoback indicate a S_{Hmax} direction of N010°E and an A_p of 0.57, indicating a normal and strike-slip faulting stress regime.

Induced seismicity is a growing concern of deep SWD wells. Snee and Zoback (2018) show that due to its orientation, the nearest Precambrian fault has a moderate probability of slipping (Fig. 2). However, the proposed injection zone is much shallower in the San Andres and Glorieta formations and therefore would not affect the deep Precambrian faults. The vertical and horizontal separation between the proposed SWD injection zone and any deep Precambrian faults is large enough to infer that there is no immediate concern or potential of induced seismicity as a result from this SWD well.

GROUNDWATER SOURCES

Quaternary Alluvium acts as the principal aquifer used for potable ground water near the Linley State SWD #1 location (Hendrickson and Jones, 1952). Nicholson and Clebsch (1961) state, "Potable ground water is not available below the Permian and Triassic unconformity but, because this boundary is not easily defined, the top of the Rustler anhydrite formation is regarded as the effective lower limit of 'potable' ground water." Around the Linley State SWD #1 well, the top of a thick anhydrite unit interpreted to represent the Rustler Formation lies at a depth of ~225 feet bgs.

STRATIGRAPHY

A thick permeability barrier exists above (Rustler Anhydrite and Salado Fm; 500 ft thick) the targeted San Andres and Glorieta injection zone. Well data indicates ~3,500 ft of rock separating the top of the injection zone from the previously stated lower limit of potable water at the top of the Rustler anhydrite formation.

CONCLUDING STATEMENT

All available geologic and engineering data evaluated around the Linley State SWD #1 well show no potential structural or stratigraphic connection between the San Andres/Glorieta injection zone and any subsurface potable water sources. The shallow injection zone and spatial location also removes any major concern of inducing seismic activity along nearby faults.

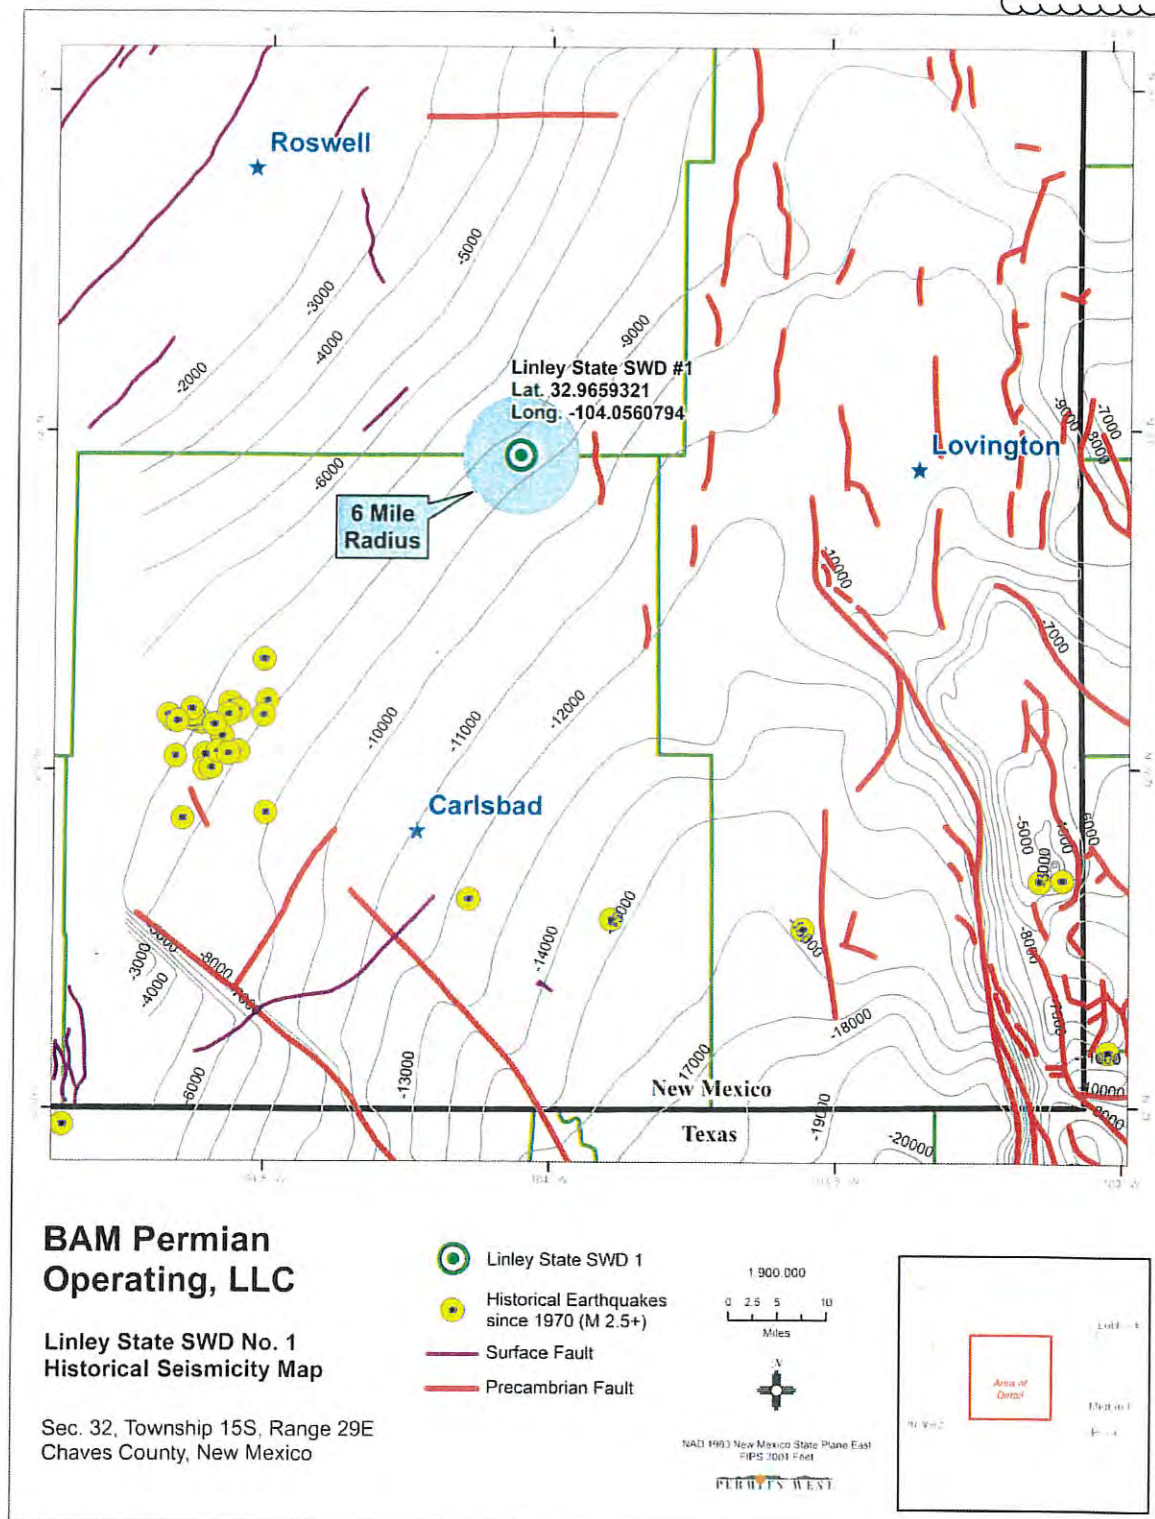

Figure 1. Structural contour map of the Precambrian basement in feet below sea level. Red lines represent the locations of Precambrian basement-penetrating faults (Ewing et al., 1990). The Linley State SWD #1 well lies ~8 miles east of the closest deeply penetrating fault, ~14 miles from the nearest surface fault and ~33 miles from the closest historic earthquake.

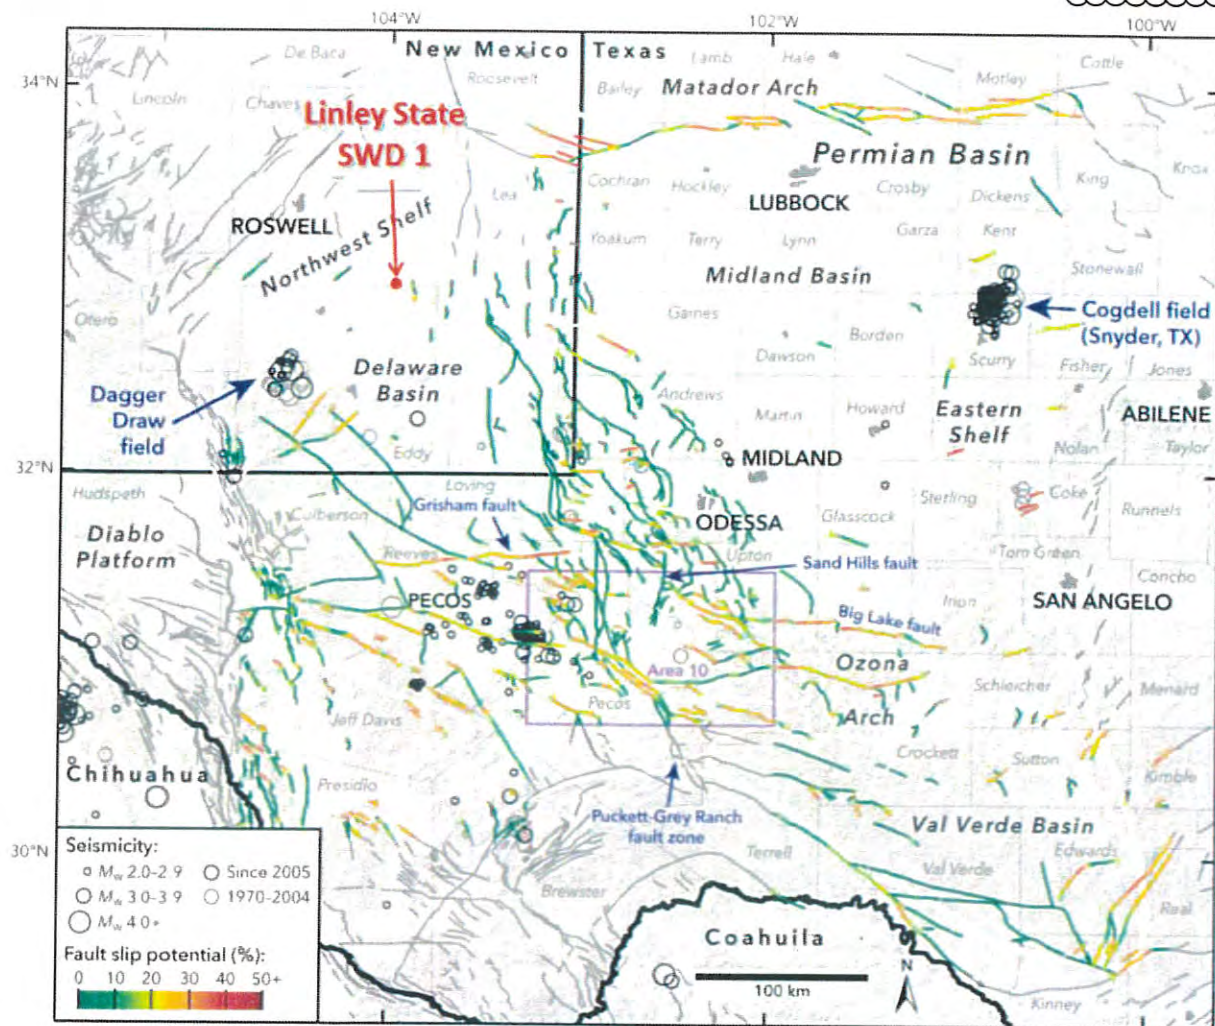

Figure 2. Modified from Snee and Zoback (2018). The nearest deep Precambrian fault lies ~8 miles east of the proposed SWD well and has a moderate probability (~10%) of slip. However, the proposed injection zone is much shallower in the San Andres and Glorieta formations and therefore removes any major concern of inducing seismicity on any known fault.

Legal Notice

BAM Permian Operating, LLC will apply to drill the Linley State SWD 1 as a saltwater disposal well. The well will dispose into the lower San Andres and Glorieta formations from 3750' to 5200'. It is staked 11 miles NNW of Loco Hills, NM at 201 FSL & 999 FWL Sec. 32, T. 15 S., R. 29 E., Chaves County, NM. Maximum disposal rate will be 5,000 bwpd. Maximum injection pressure will be 750 psi. Interested parties must file objections or requests for hearing with the NM Oil Conservation Division, 1220 South Saint Francis Dr., Santa Fe, NM 87505 within 15 days. Additional information can be obtained by contacting: Brian Wood, Permits West, Inc., 37 Verano Loop, Santa Fe, NM 87508. Phone number is (505) 466-8120.

August 22, 2019

NM State Land Office
PO Box 1148
Santa Fe NM 87504

BAM Permian Operating, LLC is applying (see attached application) to drill the Linley State SWD 1 as a saltwater disposal well. As required by NM Oil Conservation Division (NMOCD) rules, I am notifying you of the following proposal. This letter is a notice only. No action is needed unless you have questions or objections.

Well: Linley State SWD 1 TD = 5,200'

Proposed Disposal Zone: lower San Andres & Glorieta (3,750' - 5,200')

Location: 201' FSL & 999' FWL Sec. 32, T. 15 S., R. 29 E., Chaves County, NM

Approximate Location: ~11 miles NNW of Loco Hills, NM

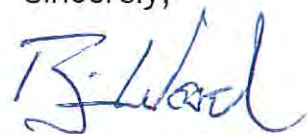

Applicant Name: BAM Permian Operating, LLC (432) 242-8851

Applicant's Address: 4416 Briarwood Ave. #110 PMB 53, Midland TX 79707

Submittal Information: Application for a saltwater disposal well will be filed with the NMOCD. If you have an objection, or wish to request a hearing, then it must be filed with the NMOCD within 15 days of receipt of this letter. The New Mexico Oil Conservation Division address is 1220 South St. Francis Dr. Santa Fe, NM 87505. Their phone number is (505) 476-3440.

Please call me if you have any questions.

Sincerely,

Brian Wood
