PROCESS DESCRIPTION

Production from all wells will flow through an 8' X 20' 3-phase production separator. Oil will flow to two oil tanks before being sent through the LACT for royalty payment purposes. The gas is sent from the production separator through a turbine meter, which will serve as measurement for the gas royalty payment.

For testing purposes, the Train is equipped with a 6' X 20' 3-phase test separator with an oil turbine meter, gas orifice meter and water turbine meter. All wells have been online for over 2 years and are in Range 3 of decline. Wells will be tested at least once per month, as specified in Hearing Order R-14299. Production will be allocated back to each well based on these well tests.

All water from the batteries will be sent to the Cedar Canyon Water Disposal Distribution system.

Additional Application Components:

The flow of production is shown in detail on the enclosed facility diagram. Also enclosed is a map detailing the lease boundaries, well and battery locations.

The oil and gas meters will be calibrated on a regular basis per API and NMOCD specifications.

Pursuant to Statewide rule 19.15.12.10(C)(4)(g) OXY USA INC requests the option to include additional pools or leases within the defined parameters set forth in the Order for future additions.

Commingling this production is the most effective means of producing the reserves. OXY USA INC understands the requested approval will not constitute the granting of any right-of-way or construction rights not granted by the lease instrument.
