Re: Application of Matador Production Company to amend Administrative Order CTB-812 to add an additional spacing unit ("lease) to the approved area for surface commingling of oil and gas production for storage, measurement and sale at a common facility located in Section 12, Township 24 South, Range 27 East, NMPM, Eddy County, New Mexico.

Dear Ms. Riley:

Under Administrative Order CTB-812, the Division authorized the commingling of oil and gas production from the Purple Sage; Wolfcamp (Gas) Pool (Pool code: 98220) from *all existing and future wells* in the following spacing and proration units ("leases") in Township 24 South, Range 27 East in Eddy County:

(a) S/2 of Section 12, currently dedicated to the Rustler Breaks 12 24 27 Well No. 1H (API 30-015-41775) and the Rustler Breaks 12 24 27 RB Well No. 204H (API 30-015-43194); and

(b) N/2 of Section 13, currently dedicated to the Brantley State Com. 13 24 27 RB Well No. 221H (API 30-015-43774) and the Brantley State Com. 13 24 27 RB Well No. 206H (API 30-015-44597)

The commingled oil and gas production from the "leases" identified above is sold at the Rustler Breaks 1H Central Tank Battery (CTB), located in the Unit P of Section 12.

Matador Production Company (OGRID No. 228937) seeks to amend Administrative Order CTB-812 to add to the authorized commingling oil and gas production from *all existing and future wells* in the 328-acre non-standard spacing and proration unit created under Order R-14576 comprised of the *N/2 S/2 of Sections 11 and 12*. This "lease" is currently dedicated to the David Edelstein Sate Com Well No. 203H (API No. 30-015-44682). Prior to commingling, gas and oil production from each "lease" will be separately metered using individual test separators with an oil turbine meter and gas orifice meter.

Re: Application of Matador Production Company for administrative approval to surface commingle (lease commingle) gas and oil production from the spacing units comprising S/2 Section 12, Township 24 South, Range 27 East, and N/2 Section 13, Township 24 South, Range 27 East, and N/2 S/2 of Section 11, Township 24 South, Range 27 East, NMPM, Eddy County, New Mexico (the "Lands")

To Whom This May Concern,

Matador Production Company ("Matador"), OGRID: 228937, requests to commingle current oil and gas production from three (3) distinct wells located on the Lands and future production from the Lands as described herein. All wells will be metered through individual test separators with an oil turbine meter and gas orifice meter. The gas commingling will occur after individual measurement at each well. Gas exiting each well test flows into one gathering line, as depicted on **Exhibit A**, the Longwood Gathering line. Each well on the Lands will have its own test separator with an orifice meter manufactured and assembled in accordance with American Gas Association (AGA) specifications. All primary and secondary Electronic Flow Measurement (EFM) equipment is tested and calibrated by a reputable third party measurement company in accordance with industry specifications.

The orifice meter is the preferred measurement device utilized by midstream and E&P companies in natural gas measurement. The gas samples are obtained at the time of the meter testing/calibration and the composition and heating value are determined by a laboratory in accordance with American Petroleum Institute (API) specifications to ensure accurate volume and Energy (MMBTU) determinations. See example from Fesco Laboratory attached as **Exhibit B** hereto.

The flow stream from each wellhead is demonstrated in the Process Flow Diagram (PFD) attached as **Exhibit A** hereto. The PFD shows that the water, oil, and gas leave the wellbore and flow into a wellhead test separator which separates the oil, gas, and water. The oil is measured via turbine meter which is calibrated periodically in accordance with industry specifications by a third party measurement company for accuracy. The gas is measured on a volume and MMBTU basis by an

orifice meter and supporting EFM equipment in accordance with American Petroleum Association (API) Chapter 21.1. The gas is then sent into a gathering line where it is commingled with each of the other wells' metered gas. The gathering line gas is then metered by another orifice meter at the tank battery check to show the total volume of gas leaving the Tank Battery. This meter is tested and calibrated in accordance with industry specifications and volume and energy are determined on an hourly, daily, and monthly basis. Once the gas exits this final tank battery sales check it travels directly into a third party sales connect meter. Longwood Gathering has its own orifice meter that measures the gas for custody transfer. These meters are also calibrated periodically to ensure the measurement accuracy.

In conclusion, all the oil and gas produced on the Lands is and will be metered at each wellhead and allocated correctly using the same measurement equipment as the pipeline sales measurement specifications accepted by API as industry standard.

Very truly yours,

MATADOR PRODUCTION COMPANY

Michael: This email is to confirm that the facility diagram (Attachment 3A) reflects the four wells that have been drilled or that are in the process of being drilled. The two other permitted wells you mentioned that are not on the diagram (Brantley State 206H and Rustler Breaks 207H) have not been drilled and will not likely be drilled until at least next year.

Let me know if you need anything else.
