Cypress 1

Cypress 5

**Flow Descriptions and Measurement:**

The Cypress 1 pad is located in UL-B-Sec. 08, T23S, R27E, and has one oil tanks. The Cypress is located in UL-M-Sec. 09, T23S, R27E and has one oil tanks. These two wells have a common gas CDP, (Central Delivery Point) which is located off site of both pads. The production from each well will flow through its own three phase metering separator with an orifice meter to meter the gas. Oil and water is measure via truck loading and tank gauging in their respective pad location.

Gas production will be allocated on a daily basis utilizing the gas test meters for each well. The gas production from each wells will flow to an allocation meter and then commingled to the CDP sales meter off-site. These meters will be calibrated on a regular basis per API & NMOCD specifications. The OCD will be notified of any future changes in the facilities.

The flow of produced fluids is shown in detail on the enclosed diagrams along with a description of each vessel. The commingling of this production is the most effective, economic means of producing the reserves and will not result in reduced royalty or improper measurement of production. The proposed commingling will reduce the surface facility footprint and overall emissions.
