Subject: Notification of Additional Equipment, Magnum Compressor Station
Discharge Permit (GW-127)
Eddy County, New Mexico

Mr. von Gonten:

DCP Midstream, LP (DCP Midstream) is providing you with the following information regarding an upcoming equipment change being made at the Magnum Compressor Station facility. Plans for the change described below are currently being finalized, with anticipated completion within the next few months. I am providing this notification in response to your e-mail dated August 22, 2011 regarding minor changes to facilities with existing New Mexico Oil Conservation Division (NMOCD) issued discharge permits.

DCP Midstream will be adding a new compressor and associated engine (collectively known as the compressor unit) at the Magnum facility. The new compressor unit, which will be the facilities third, is rated for 1,478 horsepower. The compressor unit will be placed atop a concrete foundation equipped with a series of drains that will connect to the existing facility environmental drain system. DCP Midstream does not believe the addition of this compressor unit will result in any change to the facility's potential to discharge water contaminants, nor will any water quality standard be exceeded as a result of this change.

If you have any questions concerning the information contained within this notification, please contact me at (303) 605-1936. Please send all correspondence regarding this request to me at 370 17th Street, Suite 2500, Denver, CO 80202.

Sincerely,
DCP Midstream, LP

Keith Warren, P.E.
Environmental Engineer

cc: Leonard Lowe, New Mexico Oil Conservation Division
Johnny Lamb, DCP Midstream
Jon Bebbington, DCP Midstream
