Re: Application for Downhole Commingling

Gentlemen:

We hereby request approval for downhole commingling in the following well:

OPERATOR: Turner Production Company, 852 One Energy Square, 4925 Greenville Avenue
Dallas, Texas 75206

WELL: Riddle-Florance #1, C-15-T30N-R9W
Blanco-Fruitland (sand) Gas Pool and Blanco-Pictured Cliffs (sand) Gas Pool

Other wells in the same two pools which have been approved for downhole commingling include the Amoco Production Company E. E. Elliott "C" #1, located J-9-T30N-R9W, the diagonal offset to the northwest, and the Tenneco Oil Company Florance #115, located M-10-T30N-R9W, the north direct offset to the subject well. The approval order numbers are shown on the attached plat.

The subject well has not been drilled; therefore, production information is not available.

The fluid characteristics are very similar, being sweet gas with low carbon dioxide content and BTU's in the range of 1050 to 1150. The well is not expected to produce an appreciable amount of liquids.

The value of the produced gas will not be affected by the commingling of the gas; because, the value of the gas is based upon the BTU content. The BTU content of the combined stream will be directly proportional to the percentage of gas from each formation.

We request that the allocation percentages be determined by the District Supervisor of the Oil Conservation Division after the well gas been completed and tested.

The attached plat shows the offset operators names and addresses as well as the names and approximate locations of the offset wells.

Copies of this application are being sent to the Bureau of Land Management and to all offset operators by certified mail at this mailing.

Yours very truly,

A. R. Kendrick
