**Subject:** Tennison Hanagan St 1 Production Pit

Glenn,

Attached are links to the photos of the production pit at the Hanagan State 1 well site (API: 30-015-04746). The well was drilled in early 60's, plugged, and then re-entered in late 60's. There is no way of knowing how long the pit was there and no one seems to know anything about how or when it was closed. It was mentioned in an inspection record in 2002, an LOV was issued in 2007, and the photos that show the pit open were taken in December 2007. The well has had some "ghost" operators since it was acquired by Tennison (as I understand, Mr. Tennison passed away some years ago). Daniel and Gail can bring you up to speed on the history and status now. Also attached is a link to the results of some preliminary samples that were taken in the approximate area the pit was located. Let me know if you need anything else on this end. The photos that show the pit will load a lot quicker if you download them to your hard drive to view. I have been unsuccessful in getting folks here to turn their camera resolution down a little.
