Describe Area Affected and Cleanup Action Taken.*

Upon Arrival at the Strawberry 7-2 Battery, Lease Operator discovered a 30 barrel spill that was all kept within containment. The test heater vent valve malfunctioned in the middle of the night, causing the spill. This caused the heater to bypass gas to the oil stock tank and tank bubbled over through the thief hatch. The pressure blew out the gasket on the waterleg and sprayed the heater and ground around the area. Talon LPE was contacted to take samples & submit a clean up plan to BLM. *See COA below ↓*

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
