TETRA TECH

April 24, 2012

Mr. Mike Bratcher
Environmental Engineer Specialist
Oil Conservation Division, District 2
1301 West Grand Avenue
Artesia, New Mexico 88210

Re: Closure Report for the COG Operating LLC., Chicken Hawk State #1, Unit A, Section 15, Township 25 South, Range 28 East, Eddy County, New Mexico.

Mr. Bratcher:

Tetra Tech, Inc. (Tetra Tech) was contacted by COG Operating LLC. (COG) to assess a spill from the Chicken Hawk State #1, Unit A, Section 15, Township 25 South, Range 28 East, Eddy County, New Mexico (Site). The spill site coordinates are N 32.13693°, W 104.06772°. The site location is shown on Figures 1 and 2.

Background

According to the State of New Mexico Oil Conservation Division (NMOCD) Form C-141 Initial Report, the leak was discovered on July 8, 2011, and released approximately 480 barrels of produced fluids due to an influx of production to the tank battery. Approximately 460 barrels of fluid were recovered from the spill area. The spill initiated at the tank battery impacting an area approximately 30' x 160' inside the facility firewalls. The spill breached the firewall and migrated south impacting an area approximately 360' x 1'-5' wide along a native dry wash. The initial Form C-141 is enclosed in Appendix A.

Groundwater

According to the NMOCD groundwater map, one well is located in Section 15, with a reported depth to water of 48' below surface. Based on these findings, groundwater in this area is less than 50' below surface. The groundwater data is shown in Appendix B.

Regulatory

A risk-based evaluation was performed for the Site in accordance with the NMOCD Guidelines for Remediation of Leaks, Spills and Releases, dated August 13, 1993. The guidelines require a risk-based evaluation of the site to determine recommended remedial action levels (RRAL) for benzene, toluene, ethylbenzene and xylene (collectively referred to as BTEX) and total petroleum hydrocarbons (TPH) in soil. The proposed RRAL for benzene was determined to be 10 parts per million (ppm) or milligrams per kilogram (mg/kg) and 50 ppm for total BTEX (sum of benzene, toluene, ethylbenzene, and xylene). Based upon the depth to groundwater, the proposed RRAL for TPH is 100 mg/kg.

Soil Assessment

Prior to sampling, COG removed approximately 2' of impacted material from around the tanks inside the facility. Additionally, COG performed a surface scrape 3"-6" along the spill footprint. On August 11, 2011, Tetra Tech personnel inspected the site. Due to the surface geology (dense rock) of the area, hand auger samples could not be installed to assess the spill. In order to collect samples along the spill path, an air rotary drilling rig was utilized.

On August 17-18, 2011, Tetra Tech supervised the installation of nine (9) boreholes (BH-1 through BH-9) utilizing an air rotary drilling rig. Samples were collected to approximate depths of 15' to 30' below surface. Samples were placed in laboratory provided containers and submitted for laboratory analysis. Copies of the laboratory analysis and chain-of-custody documentation are included in Appendix C. The sampling results are summarized in Table 1. The borehole locations are shown on Figure 4.

Select samples were analyzed for TPH analysis by EPA method 8015 modified, BTEX by EPA Method 8021B and chloride by EPA method 300.0. Copies of laboratory analysis and chain-of-custody documentation are included in Appendix C. The sampling results are summarized in Table 1. The bore hole locations are shown on Figure 3.

Analytical Results

Referring to Table 1, the sample from BH-1 exceeded the RRAL for total BTEX at 0-1' of 116.7 mg/kg and was not defined. All the boreholes exceeded the RRAL for TPH of 100 mg/kg, with the exception of BH-8. Borehole (BH-7) showed a TPH of 1,305 mg/kg at 5.0' and was not vertically defined. Boreholes (BH-6 and BH-9) declined below the RRAL at approximately 3.0' to 5.0'. In addition, the areas of BH-1, BH-4 and BH-5 declined below the RRAL at 7.0' and (BH-2 and BH-3) at 10.0' below surface. Borehole (BH-7) did show a TPH of 241 mg/kg at 20' below surface, which appear to be cross-contaminated with the upper soils.

The chloride impact shows a shallow impact to the subsurface soils. The areas of BH-1, BH-4, BH-5, BH-7, BH-8 exhibited elevated chloride concentrations at 0-1' ranging from 1,360 mg/kg to 9,990 mg/kg, which significantly declined with depth at 3.0' below surface. Boreholes (BH-3 and BH-9) showed a deeper impact to the soils from 0-1' to 5.0', but declined at 7.0' below surface. The remaining boreholes (BH-2 and BH-6) did not show a significant chloride impact to soils.

Remediation and Conclusion

On January 2012, Tetra Tech personnel supervised the excavation as stated in the approved work plan. In order to remove the hydrocarbon and elevated chloride concentrations, the proposed excavations depths ranged from 1.0' to 7.0' below surface. The spill foot print and final excavation depths of the soil remediation were met or exceeded as stated in the approved work plan, with the exception of BH-1, BH-2 and BH-7. Approximately 1,280 yards³ were removed and disposed of at CRI.

Due to the dense limestone formation, the excavation depths in these areas were not achieved. However, three confirmation samples (CS-1, CS-2, and CS-7) were collected to verify the TPH and BTEX concentrations were below regulatory levels. The results of the confirmation sampling are summarized on Table 1.

Referring to Table, CS-1 and CS-2 were below the RRAL for TPH and BTEX. The area of CS-7 (BH-7) exceeded the RRAL for TPH, with a concentration of 1,765 mg/kg. On March 14, 2012, Tetra Tech personnel contacted Mr. Bratcher with the NMOCD to discuss the TPH result and the dense formation encountered at the site. Based on the results, the Mr. Bratcher approved the TPH concentration for closure of the site. The excavations were backfilled with clean soil to grade.

TETRA TECH

Based on the remediation activities performed at this location, COG request closure for site. The C-141 (Final) is included in Appendix A. If you have any questions or comments concerning the assessment or the remediation activities performed at the site, please call me at (432) 682-4559.

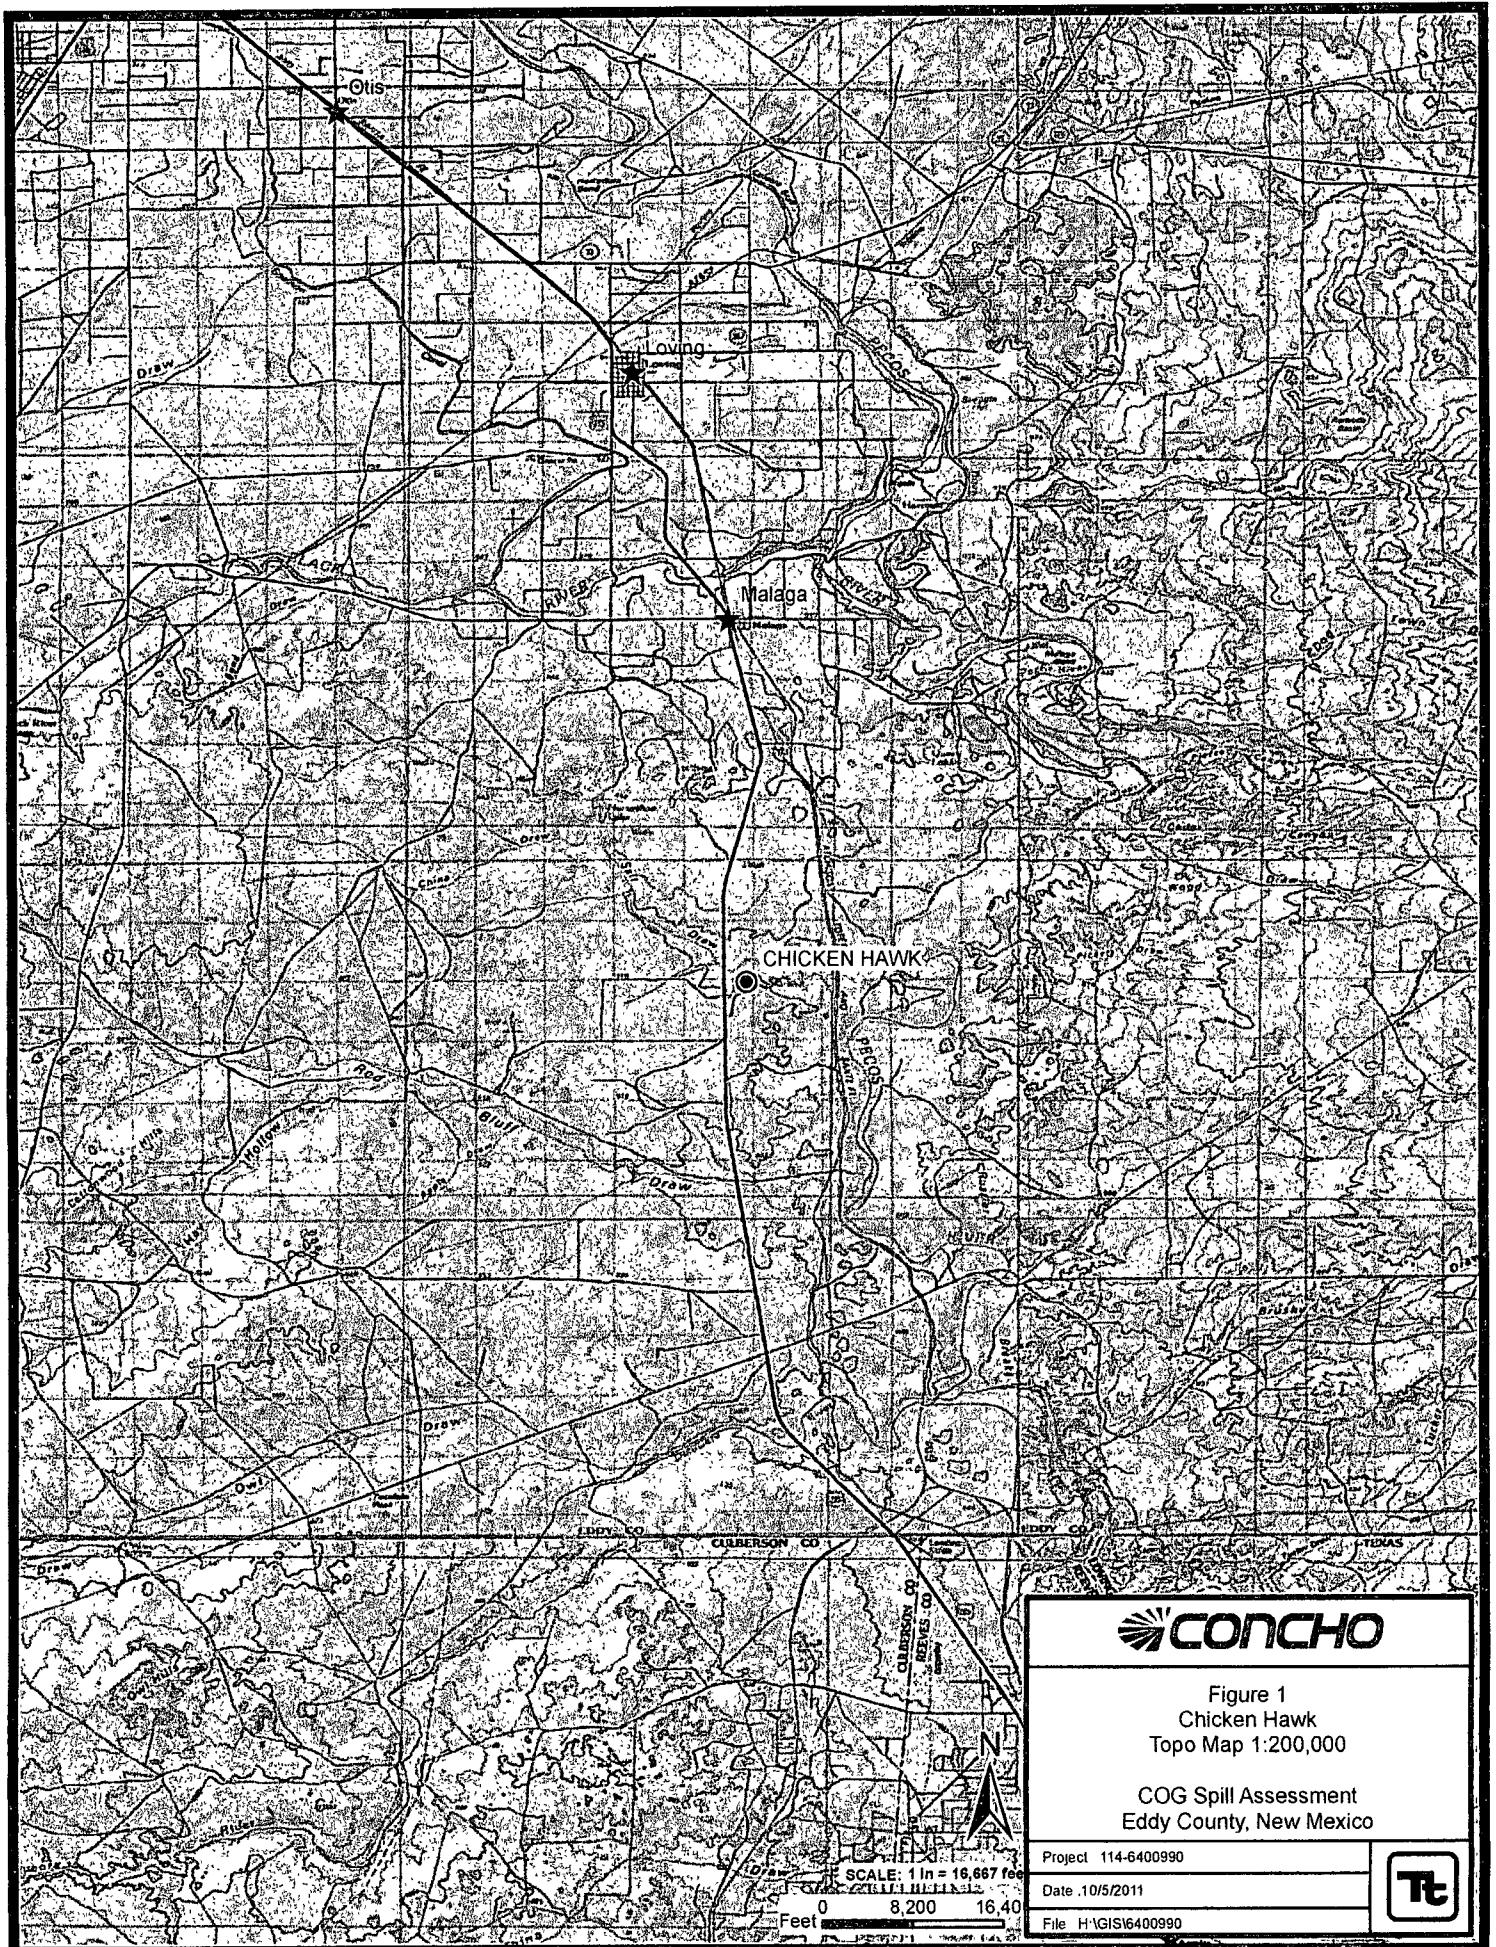

Respectfully submitted,
TETRA TECH

Ike Tavarez

N/A

Describe Cause of Problem and Remedial Action Taken.*

A flush of production caused an influx of fluid to the battery. The flush of production was due to a well being shut in for workover evaluation, and then being returned into production. Choke back the wells that have been shut in for a prolonged period of time until production returns to normal volumes.

Describe Area Affected and Cleanup Action Taken.*

Tetra Tech inspected the site and collected soil samples to define the spill extents. Impacted soil was excavated and hauled to Controlled Recovery, Inc., Hobbs, NM. Once approved, the site was backfilled with clean soil. Tetra Tech prepared closure report and submitted to NMOCD for review.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

Describe Cause of Problem and Remedial Action Taken.*

A flush of production caused an influx of fluid to the battery. The flush of production was due to a well being shut in for workover evaluation, and then being returned into production. Choke back the wells that have been shut in for a prolonged period of time until production returns to normal volumes.

Describe Area Affected and Cleanup Action Taken.*

Initially 480bbls of produced fluid was released from the tank and we were able to recover 460bbls with a vacuum truck. We recovered roughly 110bbls of oil and 350bbls of produced water from the release. All free fluid has been recovered. The majority of the release was contained inside the facility walls with some reaching into the adjacent pasture area. Microblaze has been applied to the affected area in the pasture. Tetra Tech will sample the spill site area to delineate any possible contamination from the release and we will present a work plan to the NMOCD for approval prior to any significant remediation work.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. Case Narrative

Samples for project COG/Chicken Hawk State #1 were received by TraceAnalysis, Inc. on 2011-08-19 and assigned to work order 11082204. Samples for work order 11082204 were received intact at a temperature of -1.9 C.

Samples were analyzed for the following tests using their respective methods.

Test	Method	Prep Batch	Prep Date	QC Batch	Analysis Date
BTEX	S 8021B	71488	2011-08-23 at 13:50	84192	2011-08-23 at 18:03

Results for these samples are reported on a wet weight basis unless data package indicates otherwise.

A matrix spike (MS) and matrix spike duplicate (MSD) sample is chosen at random from each preparation batch. The MS and MSD will indicate if a site specific matrix problem is occurring, however, it may not pertain to the samples for work order 11082204 since the sample was chosen at random. Therefore, the validity of the analytical data reported has been determined by the laboratory control sample (LCS) and the method blank (MB). These quality control measures are performed with each preparation batch to ensure data integrity.

All other exceptions associated with this report have been footnoted on the appropriate analytical page to assist in general data comprehension. Please contact the laboratory directly if there are any questions regarding this project.

-	WBE	237019	TraceAnalysis
1	NELAP	T104704392-10-TX	Midland

Standard Flags

F	Description
B	Analyte detected in the corresponding method blank above the method detection limit
H	Analyzed out of hold time
J	Estimated concentration
Jb	The analyte is positively identified and the value is approximated between the SDL and MQL. Sample contains less than ten times the concentration found in the method blank. The result should be considered non-detect to the SDL.
Je	Estimated concentration exceeding calibration range.
Qc	Calibration check outside of laboratory limits.
Qr	RPD outside of laboratory limits
Qs	Spike recovery outside of laboratory limits.
Qsr	Surrogate recovery outside of laboratory limits.
U	The analyte is not detected above the SDL

Analytical and Quality Control Report

Ike Tavarez
Tetra Tech
1910 N. Big Spring Street
Midland, TX, 79705

Report Date: February 9, 2012

Work Order: 12013118

Project Location: Eddy Co., NM
Project Name: COG/Chicken Hawk State #1
Project Number: 114-6400990

Enclosed are the Analytical Report and Quality Control Report for the following sample(s) submitted to TraceAnalysis, Inc.

Sample	Description	Matrix	Date Taken	Time Taken	Date Received
287904	CS-1 Bottomhole 4' (BH-1)	soil	2012-01-26	00:00	2012-01-31
287905	CS-2 Bottomhole 4' (BH-2)	soil	2012-01-26	00:00	2012-01-31
287906	CS-7 Bottomhole 1.5' (BH-7)	soil	2012-01-26	00:00	2012-01-31

These results represent only the samples received in the laboratory. The Quality Control Report is generated on a batch basis. All information contained in this report is for the analytical batch(es) in which your sample(s) were analyzed.

This report consists of a total of 18 pages and shall not be reproduced except in its entirety, without written approval of TraceAnalysis, Inc.

Case Narrative

Samples for project COG/Chicken Hawk State #1 were received by TraceAnalysis, Inc. on 2012-01-31 and assigned to work order 12013118. Samples for work order 12013118 were received intact at a temperature of 6.0 C.

Samples were analyzed for the following tests using their respective methods.

Test	Method	Prep Batch	Prep Date	QC Batch	Analysis Date
BTEX	S 8021B	74935	2012-02-02 at 14:14	88263	2012-02-02 at 14:20
Chloride (Titration)	SM 4500-Cl B	75016	2012-02-06 at 09:29	88377	2012-02-07 at 13:57
TPH DRO - NEW	S 8015 D	74990	2012-02-03 at 15:00	88324	2012-02-06 at 10:04
TPH GRO	S 8015 D	74935	2012-02-02 at 14:14	88262	2012-02-02 at 14:16

Results for these samples are reported on a wet weight basis unless data package indicates otherwise.

A matrix spike (MS) and matrix spike duplicate (MSD) sample is chosen at random from each preparation batch. The MS and MSD will indicate if a site specific matrix problem is occurring, however, it may not pertain to the samples for work order 12013118 since the sample was chosen at random. Therefore, the validity of the analytical data reported has been determined by the laboratory control sample (LCS) and the method blank (MB). These quality control measures are performed with each preparation batch to ensure data integrity.

All other exceptions associated with this report have been footnoted on the appropriate analytical page to assist in general data comprehension. Please contact the laboratory directly if there are any questions regarding this project.

Appendix

Report Definitions

Name	Definition
MDL	Method Detection Limit
MQL	Minimum Quantitation Limit
SDL	Sample Detection Limit

Laboratory Certifications

C	Certifying Authority	Certification Number	Laboratory Location
-	NCTRCA	WFWB384444Y0909	TraceAnalysis
-	DBE	VN 20657	TraceAnalysis
-	HUB	1752439743100-86536	TraceAnalysis
-	WBE	237019	TraceAnalysis
1	NELAP	T104704219-11-5	Lubbock
2	NELAP	T104704392-11-3	Midland

Standard Flags

F	Description
B	Analyte detected in the corresponding method blank above the method detection limit.
H	Analyzed out of hold time
J	Estimated concentration
Jb	The analyte is positively identified and the value is approximated between the SDL and MQL. Sample contains less than ten times the concentration found in the method blank. The result should be considered non-detect to the SDL.
Je	Estimated concentration exceeding calibration range.
Qc	Calibration check outside of laboratory limits.
Qr	RPD outside of laboratory limits
Qs	Spike recovery outside of laboratory limits.
Qsr	Surrogate recovery outside of laboratory limits.
U	The analyte is not detected above the SDL
