**Re: Closure Report for the COG Operating LLC., Holder CB Federal Paddock Tank Battery, Unit E, Section 17, Township 17 South, Range 30 East, Eddy County, New Mexico.**

Mr. Bratcher:

Tetra Tech, Inc. (Tetra Tech) was contacted by COG Operating LLC. (COG) to assess a spill from the Holder CB Federal Paddock Tank Battery located in Unit E, Section 17, Township 17 South, Range 30 East, Eddy County, New Mexico (Site). The spill site coordinates are N 32.83569°, W 103.99915°. The site location is shown on Figures 1 and 2.

### **Background**

According to the State of New Mexico C-141 Initial Report, the leak was discovered on November 13, 2011, and released approximately fifteen (15) barrels of produced fluid from the heater treater. To alleviate the problem, COG personnel repaired the heater treater. Eleven (11) barrels of standing fluids were recovered. The majority of the spill was contained within the firewall, with the exception of some overspray that affected the pasture. Micro-blaze has been applied to the overspray vegetation. The area affected measures 10' X 85'. The initial C-141 form is enclosed in Appendix A.

### **Groundwater**

No water wells were listed within Section 17. According to the NMOCD groundwater map, the depth to groundwater in this area is approximately 225' below surface. The groundwater data is enclosed in Appendix B.

## Regulatory

A risk-based evaluation was performed for the Site in accordance with the New Mexico Oil Conservation Division (NMOCD) Guidelines for Remediation of Leaks, Spills and Releases, dated August 13, 1993. The guidelines require a risk-based evaluation of the site to determine recommended remedial action levels (RRAL) for benzene, toluene, ethylbenzene and xylene (collectively referred to as BTEX) and total petroleum hydrocarbons (TPH) in soil. The proposed RRAL for benzene was determined to be 10 parts per million (ppm) or milligrams per kilogram (mg/kg) and 50 ppm for total BTEX (sum of benzene, toluene, ethylbenzene, and xylene). Based upon the depth to groundwater, the proposed RRAL for TPH is 5,000 mg/kg.

## Soil Assessment and Analytical Results

On December 21, 2011, Tetra Tech personnel inspected and sampled the spill area. Three (3) auger holes (AH-1, AH-2 and AH-3) were installed using a stainless steel hand auger to assess the impacted soils. Selected samples were analyzed for TPH analysis by EPA method 8015 modified, BTEX by EPA Method 8021B and chloride by EPA method 300.0. Copies of laboratory analysis and chain-of-custody documentation are included in Appendix C. The results of the sampling are summarized in Table 1. The auger hole locations are shown on Figure 3.

Referring to Table 1, none of the samples exceeded the RRAL for TPH, except for (AH-2). Auger hole (AH-2) showed total BTEX above the RRAL for total BTEX at 0-1' and declined at 1'-1.5'. A shallow chloride impact was encountered at the site. Auger holes (AH-2 and AH-3) showed a shallow chloride impact at 0-1' of 1,570 mg/kg and 4,750 mg/kg, respectively. The deeper samples significantly declined with depth at 1.0' below surface.

The area of AH-1 did show a deeper impact to the soils however the chloride levels declined with depth to 1,360 mg/kg at 2-2.5'. Deeper samples were not collected due to a dense caliche formation.

**TETRA TECH**

## **Remediation and Conclusion**

February 2012, Tetra Tech personnel supervised the excavation as outlined in the approved work plan. The excavation depths proposed in work plan were met. The excavated areas and depths are shown on Figure 4. Approximately 40 yards<sup>3</sup> of impacted soil were excavated and transported to CRI of Hobbs, NM for proper disposal.

Once the excavated, Tetra Tech collected a total of fifteen (15) confirmation samples (CS-1 through CS-15). The soil samples were collected for TPH, BTEX and chlorides analysis. The sampling results are shown on Table 1.

Referring to Table 1, the majority of the confirmation samples showed chloride concentrations of <200 mg/kg. The overspray area did not show a significant impact to the area. Confirmation sidewall samples (CS-4, CS-5, CS-7, CS-8 and CS-10) showed elevated chloride concentrations ranging from 2,190 mg/kg to 13,800 mg/kg. Based on the results and location, the BLM approved to defer the remaining impact until abandonment. The excavations were backfilled with clean material and brought up to surface grade.

Based on the remediation activities performed at this location, COG request closure for site. The C-141 (Final) is included in Appendix C. If you have any questions or comments concerning the assessment or the remediation activities performed at the site, please call me at (432) 682-4559.

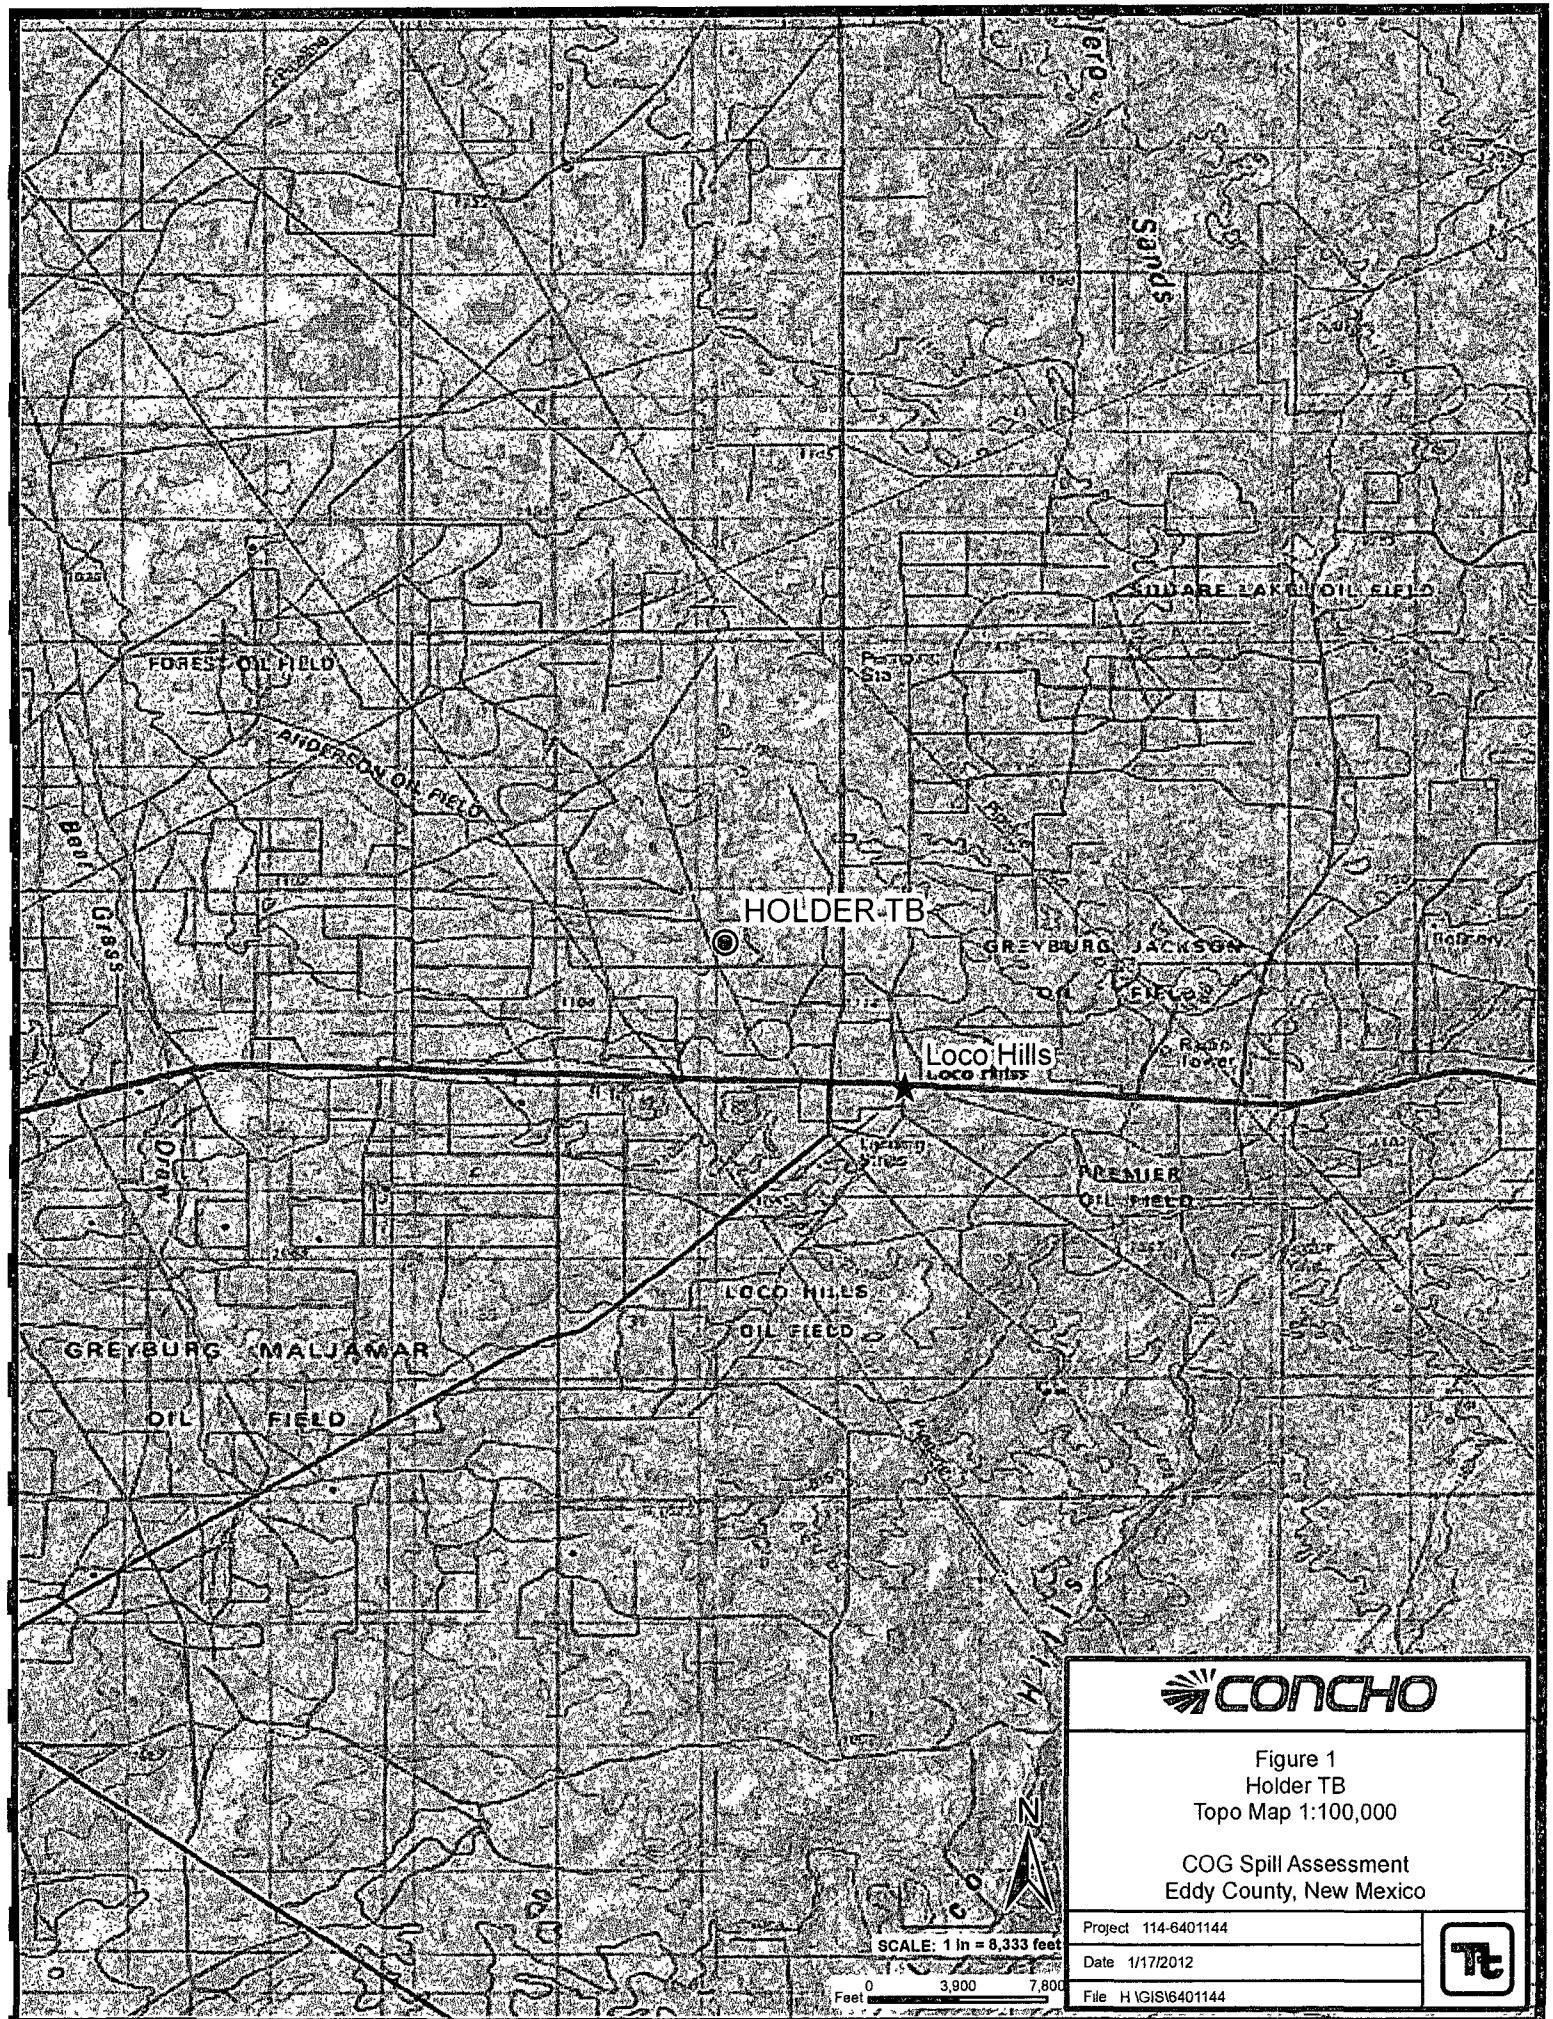

Respectfully submitted,

Tetra Tech inspected site and collected samples to define spills extent. Soil with elevated chloride concentrations was removed and hauled away to Controlled Recovery, Inc., Hobbs, NM. Site was then brought up to surface grade with clean backfill material. Tetra Tech prepared closure report and submitted to NMOCD for review.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

Heater treater fire tube gasket was leaking. The heater treater was isolated and the fire tube gasket has been repaired. The heater treater has been returned to service.

Describe Area Affected and Cleanup Action Taken.\*

Initially 15 bbls of produced fluid was released from the heater treater and we were able to recover 11 bbls with a vacuum truck. The spill area was contained inside the dike walls of the facility with the exception of some overspray due to wind gusts. All free fluid has been recovered from inside the facility and micro-blaze has been applied to the over-sprayed vegetation. Tetra Tech will sample the spill site area inside the facility to delineate any possible contamination from the release and we will present a remediation work plan to the NMOCD/BLM for approval prior to any significant remediation work.

Report Corrections (Work Order 11122306)

- BTEX and 8015 DRO/GRO results removed for sample 285195. 1/5/12

These results represent only the samples received in the laboratory. The Quality Control Report is generated on a batch basis. All information contained in this report is for the analytical batch(es) in which your sample(s) were analyzed.

This report consists of a total of 36 pages and shall not be reproduced except in its entirety, without written approval of TraceAnalysis, Inc.

# Case Narrative

Samples for project COG/Holder CB Federal Paddock TB were received by TraceAnalysis, Inc. on 2011-12-22 and assigned to work order 11122306. Samples for work order 11122306 were received intact at a temperature of 7.7 C. Samples were received on ice.

Samples were analyzed for the following tests using their respective methods.

Results for these samples are reported on a wet weight basis unless data package indicates otherwise.

A matrix spike (MS) and matrix spike duplicate (MSD) sample is chosen at random from each preparation batch. The MS and MSD will indicate if a site specific matrix problem is occurring, however, it may not pertain to the samples for work order 11122306 since the sample was chosen at random. Therefore, the validity of the analytical data reported has been determined by the laboratory control sample (LCS) and the method blank (MB). These quality control measures are performed with each preparation batch to ensure data integrity.

All other exceptions associated with this report have been footnoted on the appropriate analytical page to assist in general data comprehension. Please contact the laboratory directly if there are any questions regarding this project.

### Standard Flags

F	Description
B	Analyte detected in the corresponding method blank above the method detection limit
H	Analyzed out of hold time
J	Estimated concentration
Jb	The analyte is positively identified and the value is approximated between the SDL and MQL. Sample contains less than ten times the concentration found in the method blank. The result should be considered non-detect to the SDL.
Je	Estimated concentration exceeding calibration range.
Qc	Calibration check outside of laboratory limits.
Qr	RPD outside of laboratory limits
Qs	Spike recovery outside of laboratory limits.
Qsr	Surrogate recovery outside of laboratory limits.
U	The analyte is not detected above the SDL

### Result Comments

1 special comment - Prep error. Sample was not spiked.

# Case Narrative

Samples for project COG/Holder CB Federal Paddock TB were received by TraceAnalysis, Inc. on 2012-02-23 and assigned to work order 12022315. Samples for work order 12022315 were received intact at a temperature of 8.4 C. Samples were received on ice.

Samples were analyzed for the following tests using their respective methods.

Test	Method	Prep Batch	Prep Date	QC Batch	Analysis Date

Results for these samples are reported on a wet weight basis unless data package indicates otherwise.

A matrix spike (MS) and matrix spike duplicate (MSD) sample is chosen at random from each preparation batch. The MS and MSD will indicate if a site specific matrix problem is occurring, however, it may not pertain to the samples for work order 12022315 since the sample was chosen at random. Therefore, the validity of the analytical data reported has been determined by the laboratory control sample (LCS) and the method blank (MB). These quality control measures are performed with each preparation batch to ensure data integrity.

All other exceptions associated with this report have been footnoted on the appropriate analytical page to assist in general data comprehension. Please contact the laboratory directly if there are any questions regarding this project.

### Standard Flags

F	Description
B	Analyte detected in the corresponding method blank above the method detection limit
H	Analyzed out of hold time
J	Estimated concentration
Jb	The analyte is positively identified and the value is approximated between the SDL and MQL. Sample contains less than ten times the concentration found in the method blank. The result should be considered non-detect to the SDL.
Je	Estimated concentration exceeding calibration range.
Qc	Calibration check outside of laboratory limits.
Qr	RPD outside of laboratory limits
Qs	Spike recovery outside of laboratory limits.
Qsr	Surrogate recovery outside of laboratory limits.
U	The analyte is not detected above the SDL
