Describe Cause of Problem and Remedial Action Taken.\*  
A fire was reported by a nearby drilling rig. Emergency crew responded to the scene. Possible static electricity started the fire. The fire and all lost fluid were contained within the berm. The berm was lined and maintained its integrity throughout the incident. Vacuum trucks dispatched to recover standing fluid.

Describe Area Affected and Cleanup Action Taken.\*  
An approximate area of 30' X 120' was impacted. The secondary containment constructed for the tank battery was successful in containing all released fluid. Due to the nature of the fire and the damaged equipment, all metal within the berm will be scrapped. Soil and gravel will be removed from the secondary containment and disposed of at an NMOCD approved facility. YPC will construct a new facility in place of the old one. Depth to Ground Water: >100' (approximately 240', Section 17-T22S-R32E, per Trend Map), Wellhead Protection Area: No, Distance to Surface Water Body: >1000', SITE RANKING IS 0.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
