Re: 2010 Surface Waste Management Annual Report
Targa Midstream Services, L.P., Eunice Gas Plant (GW-005)
Lea County, New Mexico

Dear Mr. Von Gonten:

The enclosed report is submitted to the New Mexico Oil Conservation Division on behalf of Targa Midstream Services, L. P. (Targa) to present the results of Surface Waste Management monitoring performed at the Eunice Gas Plant for the 2010 calendar year.

If you have any questions or concerns, please call me at 432.687.0901 to discuss.

Sincerely,
LARSON & ASSOCIATES, INC.

1.0 Executive Summary

This report presents the 2010 summary results for the centralized surface waste management facility (Facility) at the Targa Midstream, L.P. (Targa) Gas Plant located in Unit B (NW/4, NE/4), Section 3, Township 22 South, Range 37 East, Eunice, Lea County, New Mexico (Site or Property, Figure 1). The Facility operates under New Mexico Oil Conservation Division (OCD) discharge permit GW-005.

The following activities were conducted during the past year:

- Vadose and Treatment Zone Sampling Event on March 8-9, 2010
- Treatment Zone Sampling Event on June 10, 2010
- Vadose and Treatment Zone Sampling Event on September 27, 2010
- Treatment Zone Sampling Event on December 20, 2010

2.0 Surface Waste Management Operations

On October 23, 2006, the OCD approved the renewal application for discharge permit GW-005 that included approval for Targa to construct and operate a centralized surface waste management facility to treat non-hazardous petroleum contaminated soil from its operations. The surface waste management facility is comprised of two cells. Cell 1 is divided into three sub-cells labeled A through C, and occupies approximately 2.19 acres. Cell 2 is divided into four (4) sub-cells labeled A through D, and occupies approximately 3 acres. An aerial photograph is presented in Figure 2. The Facility drawing presented as Figure 3 depicts the location of these two cells.

The OCD discharge permit allows the facility to “spread contaminated soils on the surface in eight-inch or less lifts or approximately 1,000 cubic yards (CY) per acre per eight-inch lift”. The facility total from 2006 to present for Cell 1 is 578.5 CY and 3,480 CY for Cell 2. The land farm did not accept any soil during 2010.

On July 14, 2006, July 18, 2006, October 4, 2006, November 20, 2006, and November 29, 2006, Larson & Associates, Inc., (LAI) personnel collected background samples from Cells 1 and 2 (sub-cells A, B and C). The background sample for Cell 2 sub-cell D was collected on October 12, 2007. The samples were collected from approximately 3 to 4 feet below native ground surface (bngs). Samples were placed in pre-cleaned four ounce jars, properly labeled and placed on ice upon collection. The background samples were analyzed for the New Mexico Water Quality Control Commission (WQCC) presented in 20 NMAC 6.2.3103 and summarized in Tables 1 through 4.

2.1 Vadose Zone Samples

Vadose zone samples were collected on March 9 and September 27, 2010, from approximately 3 to 4 feet bgs. LAI personnel collected vadose zone samples from Cell 1 and Cell 2 using an air rotary rig due to caliche and the methods previously described. During each semi-annual event, four locations were randomly selected from each cell and all the samples were analyzed for the following constituents:

- BTEX
- TPH (GRO and DRO)
- Metals
- Anions

January 18, 2011

Tables 1 – 4 present summaries of BTEX, TPH, metals, and chloride analyses, respectfully. Laboratory reports are presented in Appendix A.

2.1.1 Organic Sample Results

Sample results from Cells 1 (sub-cells A, B, and C) and 2 (sub-cells A, B, C, and D) were below detection limits for the BTEX constituents.

For the March 9, 2010 sampling event, TPH was below detection limits for Cells 1 and 2. For the September 27, 2010 sampling event TPH was detected in Cells 1 and 2. TPH was detected in samples from Cell 1C (8.71 ppm) and Cell 2A (9.82 ppm) but the results were below the established background level (<10 ppm). Results for Cell 2D (10.8 ppm) exhibited TPH above the background level (<10 ppm). This may be due to cross-contamination from the treatment zone.

2.1.2 Metals Sample Results

March 9, 2010 Sampling Event

Arsenic in vadose zone samples collected for Cells 1B, 1C, 2A, and 2C was slightly above the background concentration, but are within what is considered normal natural system distribution. Barium was detected above background concentrations for Cells 1A, 1B, 1C, 2A, 2C and 2D. Cadmium was detected above the background concentration for Cell 1C. Chromium was detected above background concentrations for Cells 1B, 2A, 2B, and 2D. Lead was above the individual cell background concentration for Cells 1B, 1C, 2A, 2B, 2C, and 2D. Selenium was above the background concentration (0.163 ppm) in vadose zone samples for Cell 1B. The concentrations of arsenic, chromium, lead and selenium in the vadose zone samples are within the normal variation expected in a soil matrix.

September 27, 2010 Sampling Event

Vadose zone samples, Cell 1B, 1C, 2C, and 2D exceeded the established background concentration for arsenic, but are within normal natural system distribution. Barium was detected above background in Cells 1A, 1B, 1C, 2A, 2C, and 2D. Cadmium was detected above the background concentration for Cell 1C. Chromium was detected above background concentrations for Cells 1A, 2A, 2C, and 2D. Lead was slightly above the individual cell background concentration for Cells 1C, 2A, 2B, 2C, and 2D. Selenium was above the background concentrations (0.163 ppm) in vadose zone samples for Cell 1B. The concentrations of arsenic, chromium, lead and selenium in the vadose zone samples are within the normal variation expected in a soil matrix.

2.1.3 Chloride Sample Results

March 9, 2010 Sampling Event

Chloride samples collected from Cell 1A, 1B, 1C, 2A, 2C, and Cell 2D exceeded the established background concentration for each individual cell. This may be attributed to effects from the past land uses.

September 27, 2010 Sampling Event

Chloride samples collected from Cell 1B, 1C, 2C, and Cell 2D exceeded the established background concentration for each individual cell. This may be attributed to effects from the past land uses.

January 18, 2011

2.2 Treatment (Tilled) Zone Soil Samples

Per OCD permit requirements, four 5-part composite soil samples were collected from the Cell 1 (sub-Cells A, B, and C) and Cell 2 (sub-Cells A, C, and D) treatment (tilled) zone on March 8, June 10, September 27 and December 20, 2009.

Collected samples were retrieved from 0-1 foot depth of the tilled zone using a hand auger. Sample aliquots were immediately placed in pre-cleaned 4-ounce jars, properly labeled, and iced upon collection. The samples were shipped via LoneStar Overnight, under custody seals and chain of custody to DHL. The samples were analyzed for BTEX, TPH, and chloride.

Table 5 presents a summary of the BTEX analysis. Table 6 presents a summary of the TPH and chloride analyses. Laboratory reports are included in Appendix A.

2.2.1 Organic Sample Results

BTEX constituents were below detection limits for all the samples collected in Cell 1 and Cell 2.

TPH was detected below the permit threshold of 500 ppm in treatment zone samples from Cells 1A and 1B for the first, second, third and fourth quarterly events. TPH was detected above the permit threshold of 500 ppm in treatment zone samples from Cell 1C for the first and fourth quarterly events. Composite samples collected from Cells 2A, 2B, 2C, and 2D exceeded the 500 ppm permit threshold during 2010.

2.2.2 Chloride Sample Results

Chloride was detected in Cell 2B during the first and second quarterly events (774 and 1,300 ppm, respectively). The chloride results for the remaining Cells were below the 500 ppm permit threshold.

2.3 2011 Surface Waste Management Plan

Soil from Cells 1A and 1B was used in conjunction with filling the excavated area near MW-3 as, discussed with the OCD during a meeting with Targa and LAI representatives on January 5, 2011.

Targa will continue bi-weekly tilling of Cell 1C and Cell 2 to promote volatilization and microbial degradation. The next quarterly treatment zone and semi-annual events are scheduled for March 2011. Analytical data will be submitted to OCD within 45 days following receipt of the final report for the first semi-annual sampling event.
