Santa Fe, NM 87505

**Application for Exception to Rule 303-C**

**Downhole Commingling**

**Lackey #1E Well**

**1540 FSL & 940' FEL, Unit I Section 23-T28N-R9W**

**Blanco Mesaverde (Pool IDN 72319) and Basin Dakota (Pool IDN 71599) Pools  
San Juan County, New Mexico**

Amoco Production Company hereby requests administrative approval to downhole commingle production from the Blanco Mesaverde and Basin Dakota Pools in the Lackey #1E well referenced above. The Lackey #1E is currently completed in the Dakota formation. We plan to recomplete the well in the Mesaverde with both the Mesaverde and Dakota formations being downhole commingled in the wellbore. The two zones are expected to produce at a total commingled rate of about 204 MCFD with less than 2 BCPD. The ownership (WI, RI, ORI) of these pools is not common in this wellbore. Downhole commingling will offer an economical method of production while protecting against reservoir damage, waste of reserves and violation of correlative rights. Offset operators to this well and all interest owners involved in the two formations will receive a copy of this application by certified mail.

The allocation method that we plan to use for this commingled well is as follows. The Dakota formation has been on production in this well for some time and the Mesaverde production has been well established in this area. We recommend that the Dakota formation gas and condensate be allocated based on current rates from the area while production for the Mesaverde be allocated from offset information. The Dakota is currently producing 96 MCFD with 1.5 BCPD while the Mesaverde offsets are averaging 108 MCFD with 0.57 BCPD. The recommended allocation percentages after downhole commingling would be set as a percentage of the total rate with the Mesaverde attributing 53% of gas production and 28 % of condensate production. The Dakota would be allocated at 47% of gas production and 72 % of condensate production. The actual commercial value of the commingled production will not be less than the sum of the values of the production from each of the common sources of supply.

Attached to aid in your review are plats showing the location of the well and offset wells in the same formation, a historical production plot and a C-102 for each formation. This spacing unit is located on a federal lease (SF-077112) and we will send a copy of the application to the BLM as their notice.

Should you have questions concerning this matter, please contact me at (303) 830-5344.

Sincerely,

Pamela W. Staley

## **Application for Exception to Rule 303: SEGREGATION OF PRODUCTION FROM POOLS**

### **Requirements**

- (1) Name and address of the operator:

Amoco Production Company  
P.O. Box 800  
Denver, CO 80201

- (2) Lease name, well number, well location, name of the pools to be commingled:

Lease Name: Lackey

Well Number: 1E  
Well Location: 1540' FSL & 940' FEL  
Unit I Section 23-T28N-R9W  
San Juan County, New Mexico

Pools Commingled: Blanco Mesaverde Pool  
Basin Dakota Pool

- (3) A plat of the area showing the acreage dedicated to the well and the ownership of all offsetting leases.

Attached

- (4) A current (within 30 days) 24-hour productivity test on Division Form C-116 showing the amount of oil, gas and water produced from each zone.

The Blanco Mesaverde offsets produced an average stabilized rate of 108 MCFD and 0.57 BCPD over the past 4 months. The Basin Dakota zone produced at an average rate of about 96 MCFD and 1.5 BCPD over the same period.

- (5) A production decline curve for both zones showing that for a period of at least one year a steady rate of decline has been established for each zone which will permit a reasonable allocation of the commingled production to each zone for statistical purposes.

Basin Dakota Completion: Historical production curve attached.  
Blanco Mesaverde Completion: Offset production curves attached.

- (6) Estimated bottomhole pressure for each zone. A current (within 30 days) measured bottom hole pressure for each zone capable of flowing.

Bottomhole pressures were estimated from 7-day shut-in pressures for the Dakota and from post frac pressure buildup tests on offset Mesaverde wells for the Mesaverde. Estimated bottomhole pressure in the Dakota formation is 430 PSI while the estimated bottomhole pressure in the Mesaverde is 619 PSI.

- (7) A description of the fluid characteristics of each zone showing that the fluids will not be incompatible in the wellbore.

The two formations do not produce any fluids that are expected to prohibit commingling, or promote the creation of emulsions or scale.

- (8) A computation showing that the value of the commingled production will not be less than the sum of the values of the individual streams:

Since the BTU content of the produced gasses are very similar, we would expect the commingled production to have a similar value as the sum of the individual streams.

- (9) A formula for the allocation of production to each of the commingled zones and a description of the factors or data used in determining such formula:

The allocation method that we plan to use for this commingled well is as follows. The Dakota formation has been on production in this well for some time and the Mesaverde production has been well established in this area. We recommend that the Dakota formation gas and condensate be allocated based on current rates from the area while production for the Mesaverde be allocated from offset information. The Dakota is currently producing 96 MCFD with 1.5 BCPD while the Mesaverde offsets are averaging 108 MCFD with 0.57 BCPD. The recommended allocation percentages after downhole commingling would be set as a percentage of the total rate with the Mesaverde attributing 53% of gas production and 28 % of condensate production. The Dakota would be allocated at 47% of gas production and 72 % of condensate production. The actual commercial value of the commingled production will not be less than the sum of the values of the production from each of the common sources of supply.

- (10) A statement that all offset operators and, in the case of a well on federal land, the United States Bureau of Land Management, have been notified in writing of the proposed commingling.

BLM will receive a copy of this application by certified mail. The offsetting operators listed on the attached sheet will receive a copy of this application by certified mail.

- (11) Referencing NMOCD Order No. 10470 Rule 303 (D) (11): In a case where there is diversity of ownership between the zones to be commingled (including working royalty, or overriding royalty interest), the applicant shall submit a statement that all such interest owners have been notified in writing of the proposed commingling.

All interest owners in the two formations will receive a copy of this application by certified mail.
