**The battery has areas that are stained with hydrocarbons and some chlorides from various antiquated releases. All are inside the firewalls except for a couple at the loading stations. Initial soil samples, 1' and 3' BGS, have been obtained and analyzed at Cardinal Lab for Chlorides, TPH, and BTEX. A Remediation Work Plan is being submitted for review and approval.**

**See attached Lab Analysis, Spread Sheet, Sketch of Battery with Sample Points, and Remediation Work Plan.**

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
