If a Watercourse was Impacted, Describe Fully.\*

Describe Cause of Problem and Remedial Action Taken.\*

A one inch nipple failed on drain line due to corrosion. Replaced one inch nipple with a new one to prevent a recurrence.

Describe Area Affected and Cleanup Action Taken.\*

Initially an estimated 154bbls of oil and 16bbls of produced water was released due to a one inch nipple that failed. We were unable to recover any fluid. The spill area is located on the pad and the adjacent pasture. Tetra Tech will sample the spill site area to delineate any possible contamination from the release and we will present a work plan to the NMOCD for approval prior to any significant remediation work.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

**Subject:** Weems State #1-Immediate Notification

Mr. Bratcher:

At approximately 9:00 a.m. on 7/09/2013, a produced fluid release was discovered at the above-referenced facility. The fluid was not completely contained inside the battery which is unlined. An estimated 170 barrels of produced fluid was released. The cause of the release is currently under investigation. We will follow up within 15 days with a C-141 Report. GPS coordinates and legal description is listed below.
