Describe Cause of Problem and Remedial Action Taken.*
A pin hole in the lined containment formed causing the spill that escaped containment. After the produced water was recovered it was discovered that the 6" fiberglass fill line had come apart at a tee on the bottom section causing the spill into the lined containment. Containment will be repaired. Braces will be built on fill line. Spill occurred on the south side of the pad affecting approximately 28'x160'.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
