**NM OIL CONSERVATION**  
ARTESIA DISTRICT  
**AUG 29 2014**

Describe Cause of Problem and Remedial Action Taken.\*

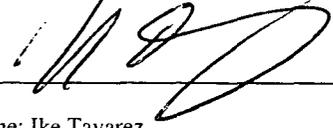

A steel flowline developed a hole due to corrosion. Replaced the steel line.

**RECEIVED**

Describe Area Affected and Cleanup Action Taken.\*

Initially 10bbls of produced water were released from a hole that developed in a steel flowline. COG was able to recover 9bbls with a vacuum truck and all free fluids were recovered. Tetra Tech inspected site and collected samples to define spills extent. Soil that exceeded RRAL was removed and hauled away for proper disposal. Site was then brought up to surface grade with clean backfill material. Tetra Tech prepared closure report and submitted to NMOCD for review.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
