If a Watercourse was Impacted, Describe Fully.*

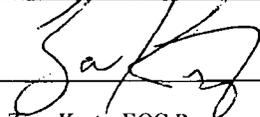

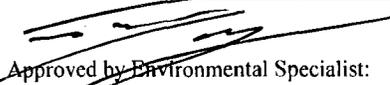

Describe Cause of Problem and Remedial Action Taken.*

Approximately 20 bbl of produced water spilled from a 4in poly line that ruptured. Approx. 15 bbls were recovered by vac truck. EOG proposed to delineate the impacted area, vertically and horizontally by collecting soil samples and having them analyzed for tph, btex, and chlorides. The impacted area would be excavated, stockpiled on poly-plastic and transported to Sundance disposal facility. Clean material would be brought in to backfill to normal grade.

Describe Area Affected and Cleanup Action Taken.*

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
