Re: Request for Amendment of Surface Commingling Order PLC-318
Tule Gas Field
Sections 22, 23, 26, 27 and 34
Township 2 South, Range 29 East NMPM
Roosevelt County, New Mexico

Dear Mr. Catanach:

This firm represents Sovereign Eagle LLC, successor operator to Eagle Resources, LP on the above-referenced acreage in Roosevelt County. Sovereign Eagle LLC seeks the amendment of Order PLC-318 to provide for the substitution of the Stoltenberg Well No. 2 for the Stoltenberg Well No. 1.

Order No. PLC-318 (copy enclosed) issued by the Division on November 20, 2008 authorized surface commingling from among other leases and wells the Stoltenberg Well No. 1 (API No. 30-041-2808) located 1650 feet from the north line and 2310 feet from the west line, within the SE/4 of the NW/4 of Section 26 (Unit F) T-2-S, R-29-E. In October of 2014, Sovereign Eagle attempted the reentry of the Stoltenberg No. 1 well, but wellbore problems prevented the successful completion of the operation. Subsequently, in December, Sovereign Eagle successfully drilled the Stoltenberg Well No. 2 (API No. 30-041-20965) at a location 1650 feet from the north line and 2260 feet from the West line of Section 26. The company plans to complete the well in the near future.

No amendment to any provision of Order PLC-318 is sought other than the substitution of the Stoltenberg No. 2 Well for the No. 1. Notification was provided for the original administrative application for surface commingling and no party objected or otherwise appeared at that time. Therefore, no further notification is indicated under the Division's rules.

Very truly yours,

Commingled gas production from the wells detailed above shall be measured and sold at the Central Delivery Point (CDP) located in Unit P of Section 28, Township 2 South, Range 29 East, NMPM, Roosevelt County, New Mexico..

Gas production from all the wells shall be measured continuously with calibrated allocation meters installed in the wells prior to commingling with gas from other wells. Gas production shall then be allocated back to each well utilizing allocation and sales meter volume data, and shall be determined in accordance with the following procedure.

The production allocated to each well will be the integrated volume from the CDP gas sales meter, less the sum of the other allocation meter volumes, plus any lease use gas. In the event the sum of the allocation meter volumes do not equal the integrated volume of the CDP gas sales meter, the gas production from each well shall be calculated using the volume its allocation meter indicates, divided by the sum of all the allocation meter volumes. This percentage will then be multiplied by the integrated volume of the CDP gas sales meter, plus lease use gas.

Gas is approved for off-lease measurement and sales after being metered on-lease. Any liquid hydrocarbons produced from the wells shall be commingled and gauged daily. The allocation and the CDP meters shall be calibrated semi-annually.

NOTE: This installation shall be installed and operated in accordance with the applicable Division Rules and Regulations. It is the responsibility of the producer to notify the transporter of this commingling authority.

FURTHER: The operator shall notify the Hobbs district office of the Division prior to implementation of commingling operations.

Rc: Request for Surface Commingling
Tule Gas Field

RECEIVED
2008 OCT 20 PM 3 31

Ladies and Gentlemen:

Eagle Resources, LP as the operator of the Tule Gas Field respectfully requests OCD approval for surface commingling of oil and gas production from seven (7) producing wells and associated leases. These wells and leases are as follows:

Lease Name	API Number	Location	Lease(s) Type
Cook #1	30-041 20823	B-34-2-29 <i>DBI</i>	Fee <i>Tule; Penn Gas (86443)</i>
Wendell Best #1	30-041-20808	J-27-2-29 <i>(DWC 4029)</i>	Fee <i>Tule; Penn Gas (86443)</i>
J.T. McGee #1	30-041-20813	B-27-2-29 <i>DHC-2634</i>	Fee <i>" " "</i>
Speight #1	30-041-20819	I-22-2-29	Fee <i>Tule; Penn Gas</i>
Perry #1	30-041-20828	M-23-2-29	Fee <i>" " "</i>
Morrison #1	30-041-20846	A-22-2-29	Fee & Federal <i>" "</i>
Stoltenberg #1	30-041-20809	F-26-2-29	Fee <i>Tule; San Andres Gas (86444)</i>

History: In the early 1950s, the Grady Best #1 was the first well drilled in what would later become the Tule Field, this well was plugged and abandoned. The first commercial production and subsequent developmental drilling of the Tule field occurred in 1986 by Marshall Pipe and Supply Company of Dallas, Texas. Ultimately eight (8) wells were drilled and completed. These wells established commercial production from the Montoya and various sands and carbonates in the Pennsylvanian formations except for the Stoltenberg #1 which appears to be capable of production from the San Andres formation. Currently six (6) wells produce from the Montoya and/or Pennsylvanian formation, one (1) well (Powell #1) serves as a SWD well and the Stoltenberg #1 is scheduled for workover thereby reestablishing production from the San Andres formation.

After drilling and completion, and once production had been established, individual tank batteries with separation equipment was constructed for each producing well. During the past , twenty (20) years this equipment deteriorated and was unserviceable when Eagle Resources, LP was acquired by a new investment and management group in 2007.

Recent Activity: Based upon the request of the surface owner and in consultation with and the approval of OCD Hobbs office personnel, Eagle began various workover, surface equipment replacement, reclamation, and restoration activities. These activities include, but were not necessarily limited to, the following:

1. Each location was re-built and cliché hauled to re-surface each pad.
2. All roads were clichéd to allow all weather access to the wells.
3. All pumping units, tanks, and flow-lines were removed.
4. Each well was pulled and down-hole equipment changed out such as rods, pump, and tubing - when required.
5. Each well was equipped with new pumping units with crank and bull guards.
6. New flow-line was laid and pressure tested.
7. Drilling pit areas, which had not fully reclaimed naturally, were reclaimed in accordance with OCD guidelines.

X Due to the relatively low production volumes from the individual wells it is not economically feasible to install new individual tank batteries on each lease at an average cost of approximately \$100,000.00 per battery. However, Eagle determined that a centralized battery with individual well test equipment would be practical. In addition, a centralized facility has the added benefit of minimizing the visual impact versus multiple facilities and of minimizing the chance and mitigating the potential environmental impact of a surface storage failure.

The central battery was designed and built to allow Eagle the ability to monitor and test each well separately. This includes oil, gas, and water (a detailed diagram is shown on Exhibit "2"). This process improves the economics for all interest owners. This central battery was built on a cliché location and is fenced. All tank storage was set on 20 millimeter plastic liner and bermed. A main header system was constructed to allow each individual well to be isolated and tested through a separate production separation and storage system. Two 30" x 10' gas separators were placed in front of one 4' x 20" heater treater and one 6' x 20" heater treater. Gas from each gas separator is monitored and calculated through separate gas meter loops, then passes to another 30" x 10' gas separator in which a new compressor system moves the gas down the sales line. Produced water passes from each heater treater and metered to one 500 bbl fiberglass tank. The produced water is then transferred by pump to a disposal system. Oil passes from each heater treater to two (2) new 300 bbl steel tanks, each tank is gauged daily.

Conclusion: For the reasons cited herein, Eagle respectfully requests approval for surface commingling of the Tule Field wells and associated leases. In support of our request we enclose the following:

1. Well site diagrams.
2. Flow line routes and complete schematics of central battery construction with compressor site
3. Letter from OCD after final inspection of reclamation and restoration activities on Tule Field leases.
4. Letters and notification to working, royalty, and overriding royalty interest owners and off-set operators within ½ mile radius of the Tule Field leases.

Sincerely,

Frank Morgan

Township 2 South, Range 29 East NMPM
Roosevelt County, New Mexico

Dear Mr. Catanach:

This firm represents Sovereign Eagle LLC, successor operator to Eagle Resources, LP on the above-referenced acreage in Roosevelt County. Sovereign Eagle LLC seeks the amendment of Order PLC-318 to provide for the substitution of the Stoltenberg Well No. 2 for the Stoltenberg Well No. 1.

Order No. PLC-318 (copy enclosed) issued by the Division on November 20, 2008 authorized surface commingling from among other leases and wells the Stoltenberg Well No. 1 (API No. 30-041-2808) located 1650 feet from the north line and 2310 feet from the west line, within the SE/4 of the NW/4 of Section 26 (Unit F) T-2-S, R-29-E. In October of 2014, Sovereign Eagle attempted the reentry of the Stoltenberg No. 1 well, but wellbore problems prevented the successful completion of the operation. Subsequently, in December, Sovereign Eagle successfully drilled the Stoltenberg Well No. 2 (API No. 30-041-20965) at a location 1650 feet from the north line and 2260 feet from the West line of Section 26. The company plans to complete the well in the near future.

No amendment to any provision of Order PLC-318 is sought other than the substitution of the Stoltenberg No. 2 Well for the No. 1. Notification was provided for the original administrative application for surface commingling and no party objected or otherwise appeared at that time. Therefore, no further notification is indicated under the Division's rules.

Very truly yours,

Commingled gas production from the wells detailed above shall be measured and sold at the Central Delivery Point (CDP) located in Unit P of Section 28, Township 2 South, Range 29 East, NMPM, Roosevelt County, New Mexico..

Gas production from all the wells shall be measured continuously with calibrated allocation meters installed in the wells prior to commingling with gas from other wells. Gas production shall then be allocated back to each well utilizing allocation and sales meter volume data, and shall be determined in accordance with the following procedure:

The production allocated to each well will be the integrated volume from the CDP gas sales meter, less the sum of the other allocation meter volumes, plus any lease use gas. In the event the sum of the allocation meter volumes do not equal the integrated volume of the CDP gas sales meter, the gas production from each well shall be calculated using the volume its allocation meter indicates, divided by the sum of all the allocation meter volumes. This percentage will then be multiplied by the integrated volume of the CDP gas sales meter, plus lease use gas.

Gas is approved for off-lease measurement and sales after being metered on-lease. Any liquid hydrocarbons produced from the wells shall be commingled and gauged daily. The allocation and the CDP meters shall be calibrated semi-annually.

NOTE: This installation shall be installed and operated in accordance with the applicable Division Rules and Regulations. It is the responsibility of the producer to notify the transporter of this commingling authority.

FURTHER: The operator shall notify the Hobbs district office of the Division prior to implementation of commingling operations.
