This surface commingling application is a request to allow product from the four LW Ward wells to be commingled at the LW Ward Battery. All wells are from the Bronco field. Well 001 is from the Wolfcamp zone or formation, while Wells 2 UT (also known as 002) and 004 are from the Siluro Devonian zone and Well 003 is from the San Andres zone. These wells are part of a fee lease where Apache has a contractual interest in the LW Ward Joint Operating Agreement. There is no depth segregation on the assignment or operating agreement. The fee lease does not have a pugh clause, so the LW Ward working interest owners each have all depths in this quarter section.

The production details follow:

Production enters header and is separated in a 10 x 30 Production Separator. Oil is tank gauged for measurement and truck hauled. Gas is metered off of Production Separator and sent to Schenk lease (HD Schenck No. 001), which is included within a Joint Operating Agreement (the Boundary Map is included for this unit). Water is transferred from Production Separator via 4" poly lines to Bronco SWD wells in same field but located in Texas. Water is metered prior to disposal. Each well in Ward lease is tested on a monthly basis through an 8 x 20 tester where oil, water, and gas are metered for allocation back to each well.
