Describe Cause of Problem and Remedial Action Taken.\*  
During pumping operation for frac job, the internal parts of the pump power end of the pump overheated causing a small fire at the pump. The pump was shut down and the fire was put out using a fire extinguisher. After the fire was out and no possibility of a flare up, they released pressure off the lines, rigged down the pump, and it was removed from the line. Damage was contained to the pump power end and no other damage resulted.

Describe Area Affected and Cleanup Action Taken.\*  
There was no affected area and the pump was removed from the line. (Note: No GIS mapping available yet, well too new)

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
