RECEIVED
MAR 12 2014
NMOCD ARTESIA

Describe Cause of Problem and Remedial Action Taken.*
Cause:
OXY INDIAN BASIN GAS PLANT FLARED RESIDUE SALES GAS AND INLET ENTERPRISE GAS DUE TO HIGH OXYGEN CONTENT. FLARED INTERMITTENTLY FOR SEVERAL DAYS DUE TO HIGH OXYGEN CONTENT. FLARED FOR 15 HOURS IN THE FIVE DAY SPAN.
Remedial Action Taken:
OPERATIONS CHECKED STABILIZER DISCHARGE METER WITH PORTABLE OXYGEN ANALYZER BUT DIDN'T SHOW ANYTHING. KINDER MORGAN WAS CALLED OUT TO CHECK THEIR EQUIPMENT, WHICH TESTED OUT GOOD, INDICATING THERE WAS O2 IN GAS STREAM. IT WAS DETERMINED THE SOURCE OF OXYGEN WAS COMING FROM ENTERPRISE GAS. ENTERPRISE GAS COMPRESSORS WERE TAKEN DOWN, AND PIPELINE BLOWN DOWN TO FLARE. PURGED NORTH AND SOUTH ENTERPRISE LINES TO FLARE TO REMOVE ANY RESIDUAL OXYGEN IN LINES. ONCE LINES WERE PURGED FLOW WAS DIVERTED BACK TO INLET OF PLANT.

Describe Area Affected and Cleanup Action Taken.*
N/A

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
