Watercourse was Impacted, Describe Fully.\*

Describe Cause of Problem and Remedial Action Taken.\* Truck driver left the valve open on the unloading line. Spill stayed on location. All fluid was picked up by a vacuum truck. The groundwater in the surrounding area shows > 100' using the SEO data. The following are the recommended action levels for the site : Chloride – 250 ppm, TPH – 5,000 ppm, BTEX – 100 ppm(field vapor analysis).

Describe Area Affected and Cleanup Action Taken.\* Due to the hard rock at the site, only 6" of impacted soil was able to be excavated and hauled to CRI Disposal. Confirmation lab samples were taken at the bottom of the excavation. Clean native soil was backfilled in the excavation. No re-seeding was completed due to the area being a caliche location for a battery. Attached is a plat map, field analytical, pictures, disposal tickets and lab confirmations f the remediation.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
