If a Watercourse was Impacted, Describe Fully.*

NM OIL CONSERVATION
ARTESIA DISTRICT
MAY 22 2015

Describe Cause of Problem and Remedial Action Taken.*
A gasket failed on the heater-treater. The vessel was bypassed. The gasket will be replaced.

RECEIVED

Describe Area Affected and Cleanup Action Taken.*
The spill impacted approximately 4,200 sq.ft. of caliche pad area inside the earthen containment around the process equipment. The free standing fluid was recovered with a vacuum truck. A hydro-vac will be used to remove the saturated soil around the equipment. Date to start will be based on crew availability. The spill area will be cleaned in accordance to the NMOCD and BLM remediation guidelines.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

Spill due to a gasket failure on the fire tube flange.

Brad tried all day to get the Hydro-vac crew on location yesterday. Will possibly get crew out today to start the soil removal

I will be in South Texas on a condensate release most of next week.

Thanks

Tony
