If a Watercourse was Impacted, Describe Fully.\*

Describe Cause of Problem and Remedial Action Taken.\* Spill from frac tank ran across caliche location. All fluid was picked up by a vacuum truck. The groundwater in the surrounding area shows > 100' using the SEO data. The following are the recommended action levels for the site : Chloride - 250 ppm, TPH - 5,000 ppm, BTEX - 100 ppm(field vapor analysis).

Describe Area Affected and Cleanup Action Taken.\* Due to the hard rock and heavy traffic of the site, only 1' of impacted soil was excavated and hauled to CRI Disposal. Confirmation lab samples were taken on the bottom of the excavation. Clean caliche was backfilled in the excavation. No re-seeding was completed due to the site being a caliche well pad. Attached is a plat map, field analytical, lab confirmations, disposal tickets and pictures of the remediation.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
