Describe Cause of Problem and Remedial Action Taken.\*

Transfer lines were open ended after being rigged up but tied into a centrifugal pump on pits. A valve was not checked when starting a mix pump and the mud was released through the transfer lines. A vacuum truck recovered 80 bbls of produced water and the valve was closed.

Describe Area Affected and Cleanup Action Taken.\*

The area affected was approximately 100' x 80' on the north end of the location both on and off the well pad. Remediation was completed in accordance with the remediation plan verbally approved by Mike Bratcher of NMOCD.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
