APPLICATION FOR POOL COMMINGLE AND CENTRAL TANK BATTERY

Commingling proposal for Cedar Canyon wells:

Proposal for Cedar Canyon 16 #1H, Cedar Canyon 16 State #2H, Cedar Canyon 16 State #6H, Cedar Canyon 16 State #7H, Cedar Canyon 16 State #8H, Cedar Canyon 16 State #9H, Cedar Canyon 16 State #10H, Cedar Canyon 16 State #11H & Cedar Canyon 16 State #12H.

OXY USA INC is requesting approval for Pool commingling and use of central tank batter for the following wells:

State Lease VA-836

A map is enclosed showing the State leases and well locations in Section 16, T24S R29E.

Oil & Gas metering:

Cedar Canyon 16-1 central tank battery is located in NW/4 NW/4 of Section 16, New Mexico.

Oil, gas and water volumes from each well routed to Cedar Canyon 16-1 central tank battery will be determined by using a test separator and dedicated test oil, water and gas meters located at the lease. Care will be taken that one well is always producing through the testing equipment. Production will be allocated on a daily basis based on the most recent individual well test of oil, gas and water. Well tests for each well will be conducted at least once per month for a minimum of 24 hours each well.

The oil production from the Cedar Canyon wells listed in the list above will be commingled, measured and sold on lease using a LACT Unit. Production will be allocated by well test method. Produced water will be measured through a turbine meter and disposed at the Cedar Canyon 16 #3 SWD and/or trucked if necessary from the lease. The gas will be sold after it is measured by Oxy check meter located at the lease. The oil and gas meters will be calibrated on a regular basis per API and NMOCD specifications. The NMOCD will be notified of any future changes in the facility.

Process and Flow Descriptions:

Please see attached block flow diagram for the Cedar Canyon 16-1 CTB. The flow route of produced fluids is shown in detail along with size of each vessel.

The commingling of production is in the interest of conservation and waste and will result in the most effective economic means of producing the reserves in place from the affected wells and will not result in reduced royalty or improper measurement of production. The proposed commingling will reduce operating expenses as well as reduce the surface facility footprint and overall emissions.

OXY USA WTP LP understands the requested approval will not constitute the granting of any right-of-way or construction rights not granted by the lease instrument. These applications will be submitted separately for approval per NMOCD regulations.
