Re: San Juan 29-7 Unit #584
1620'FNL, 1800'FEL, Section 6, T-29-N, R-7-W
30-039-25654

Gentlemen:

The above referenced well is a Fruitland Coal/Pictured Cliffs commingle. Order DHC-1630 issued for the commingling. The following allocation formula is submitted for your approval:

Fruitland Coal -	34 % gas	0 % oil
Pictured Cliffs -	66 % gas	0 % oil

These percentages are based on isolated flow tests from the Fruitland Coal and Pictured Cliffs during completion operations.

Please let me know if you have any questions.

Sincerely,

Peggy Bradfield
Regulatory/Compliance Administrator

NMOCD - Santa Fe

Downhole Commingling Allocation Worksheet

San Juan 29-7 #584
1620' FNL, 1800' FEL, Section 6, T29N-R7W
Rio Arriba Co., New Mexico

The percentage allocation for the Fruitland and Pictured Cliffs zones were derived as follows:

The Pictured Cliffs zone was tested during completion on 10/2/97. It flowed 278 Mcf/d, 0 bo/d and 0 bw/d against a separator pressure of 253 psig.

The Fruitland Coal zone was tested during completion on 10/6/97. It flowed 142 Mcf/d, 0 bo/d and 0 bw/d against a separator pressure of 250 psig.

Production allocation for the Pictured Cliffs =

$$\frac{\text{Pictured Cliffs production (Mcf/d)}}{\text{Pictured Cliffs production (Mcf/d) + Fruitland production (Mcf/d)}} = \frac{278 \text{ Mcf/d}}{278 \text{ Mcf/d} + 142 \text{ Mcf/d}} = 0.66$$

Production allocation for the Fruitland Coal =

$$\frac{\text{Fruitland Coal production (Mcf/d)}}{\text{Pictured Cliffs production (Mcf/d) + Fruitland production (Mcf/d)}} = \frac{142 \text{ Mcf/d}}{278 \text{ Mcf/d} + 142 \text{ Mcf/d}} = 0.34$$
