Application for surface commingle, San Andres and Grayburg Pools Lea County, NM (T22S, R37E, Section 11)

Dear Sirs,

Chevron U.S.A. Inc. respectfully requests administrative approval to surface commingle oil, gas, and water production from the San Andres - Grayburg Pool through Chevron's Lou Wortham 11-1 Central Tank Battery. Chevron requests the approval to minimize surface disturbance and future traffic by concentrating activities at one battery. The only well currently going to the Lou Wortham 11-1 CTB is the Lou Wortham 11-1 (API: 30025382180001). We will be commingling the Lou Wortham C4 (API: 30025102110001) and Lou Wortham 11-3 (API: 30025382360001) to the existing Lou Wortham 11-1 CTB. These wells are all located in Section 11, T22S, R37E in Lea County, New Mexico.

Each well will be tested monthly in the following manner. The Lou Wortham 11-1, 11-3, and C4 will all be tied into a single header. All three wells will send their production to the primary 3-phase separator. The subtraction method will be used for each of the wells, and the other two wells not in test will be shut-in during the test period for the well that is in test. The separator meters will be used to measure oil and water production via turbine type meters and gas will be measured via an electronic flow meter. Allocation will be calculated, as mentioned before, using the subtraction method for these wells. To reiterate, all wells will be tested monthly to ensure proper allocation.

Sincerely,

Cindy Herrera-Murillo
Permitting Specialist

APPLICATION FOR COMMINGLING and OFF LEASE MEASUREMENT AT A COMMON
CENTRAL TANK BATTERY

Proposal for commingling all oil, water, and gas for the Lou Wortham 11-1, 11-3, and C4.

Proposal for Lou Wortham 11-1 Central Tank Battery
Chevron USA Inc. is requesting approval for the Commingling of oil and gas.

Oil & Gas metering:

The Lou Wortham 11-1 Central Tank Battery (CTB) is located adjacent to the Lou Wortham 11-1 well. Each well will be tested monthly in the following manner. The Lou Wortham 11-1, 11-3, and C4 will all be tied into a single header. All three wells will send their production to the primary 3-phase separator. The subtraction method will be used for each of the wells, and the other two wells not in test will be shut-in during the test period for the well that is in test. The separator meters will be used to measure oil and water production via turbine type meters and gas will be measured via an electronic flow meter. Allocation will be calculated, as mentioned before, using the subtraction method for these wells. To reiterate, all wells will be tested monthly to ensure proper allocation.

These meters will be calibrated on a regular basis per API, NMOCD and BLM specifications. The BLM and OCD will be notified of any future changes in the facilities.

Process and Flow Descriptions:

The flow of production is shown in detail on the enclosed process flow diagram and facility diagram maps which show the lease boundaries, well locations, flow line location, CTB, and gas sales meter. The commingling of this production is the most effective economical means of producing the reserves and will not result in reduced royalty or improper measurement of production. The proposed commingling will reduce footprint, reduce traffic, and lower overall emissions.

Chevron U.S.A. Inc. understands that the requested approval will not constitute the granting of any right-of-way or construction rights not granted by the lease instrument.

All royalty and overriding interest owners will be notified. Chevron is the only working interest owner.

Application for surface commingle, San Andres and Grayburg Pools Lea County, NM (T22S, R37E, Section 11)

Dear Sirs,

Chevron U.S.A. Inc. respectfully requests administrative approval to surface commingle oil, gas, and water production from the San Andres - Grayburg Pool through Chevron's Lou Wortham 11-1 Central Tank Battery. Chevron requests the approval to minimize surface disturbance and future traffic by concentrating activities at one battery. Only the Lou Wortham 11-1 (API#: 300253821800) currently produces to this battery. We will be commingling the following wells to the aforementioned battery: Lou Wortham 11-3 (API#: 300253823600) and the Lou Wortham C4 (API#: 300251021100) as well as the Lou Wortham B2 (API#: 300252213500). These wells are located in Section 11, T22S, R37E in Lea County, New Mexico. This commingle will reduce the overall maintenance cost associated with the wells and facilities at this location.

Each well will be tested monthly in the following manner. The Lou Wortham 11-1, 11-3, and C4 will go into a header which will run to a 3-Phase Heated Separator. The test separator will measure oil and water production via turbine type meters and gas will be measured via an electronic flow meter. Allocation will be calculated through the subtraction method for these wells by shutting in the wells which are not being tested at the time.

Sincerely,

Cindy Herrera-Murillo
Permitting Specialist
