APPLICATION FOR POOL AND LEASE COMMINGLE, OFF-LEASE STORAGE, MEASUREMENT AND SALES

Commingling proposal for MOC Federal Central Facility

OXY USA WTP LP requests to amend previously approved Order PLC-262 to add Encore 12 Indian Com 1 condensate production. As approved by PLC-262, production is commingled at individual batteries listed below. Condensate from all of the batteries is sent to MOC Federal Central Facility for storage, measurement and sales. In addition, Indian Basin A #1 (30-015-00034) has been removed from the commingling permit.

Commingling this production is the only way to economically produce these minerals and maximize reserve recovery. The estimated condensate production of Encore 12 Indian Com 1 cannot justify the \$150,000 capital investment needed to separate production at an individual battery. Commingling production will result in maximum ultimate economic recovery of condensate with minimum waste and with minimum adverse effect on ultimate recovery of other mineral resources, as per 43 CFR 3162.1(a).

Encore 12 Indian Com 1 will be sent to the North Indian Basin Unit (NIBU) 11 Battery (O-02-21S-23E). The wells feeding that battery and MOC Federal Central Facility (D-01-21S-23E) are listed below.

North Indian Basin Unit 11 Battery Process Flow:

Encore 12 Indian Com 1 will flow to a dedicated 6' X 15' three-phase separator. The vessel is equipped with a condensate turbine meter (OM-3927), gas orifice meter (C36869T) and a water turbine meter. The gas meter will serve as the FMP for the purpose of royalty payment. After separation and metering, the condensate stream will then combine with the condensate from the other wells at NIBU 11 Battery.

The surface commingling of the other wells at NIBU 11 Battery was approved under PLC-262. Comanche Fed 3 #1 and NIBU Gas Com #3 flow to a 6' X 15' three-phase production separator. The vessel is equipped with a condensate turbine meter (OM-3968), gas orifice meter (C36831P) and a water turbine meter. The gas meter serves as the FMP for the purpose of royalty payment. After separation and metering, the condensate stream combines with the condensate from the other wells at NIBU 11 Battery. In order to obtain well tests, the Comanche Fed 3 #1 and NIBU Gas Com #3 are shut-in while the other well is being produced.

NIBU #20, 21, 24 and 30 flow to a 6' X 15' three-phase production separator. The vessel is equipped with a condensate turbine meter, gas orifice meter (C36863P) and a water turbine meter. The gas meter serves as the FMP for the purpose of royalty payment. After separation and metering, the condensate stream combines with the condensate from the other wells at NIBU 11 Battery. To obtain well tests, the NIBU wells flow to a 4' X 15' three-phase test separator which is equipped with a condensate turbine meter (OM-3928), gas orifice meter (C36868T) and a water turbine meter.

The combined condensate production stream flows to the MOC Federal Central Facility for storage, measurement and sales. Condensate is allocated back to each well based on well test.

As approved by PLC-262, production is commingled at individual batteries listed below. The condensate from the facilities, except for Indian Hills State Com Central Battery, is also sent to MOC Federal Central Facility, after separation and well testing at the individual facilities. Condensate is allocated back to each well based on well test.

Attention: Charles E. Kendrix

The above named company is hereby authorized to surface commingle, store, and sell off-lease, oil and gas production from existing and future wells within the spacing and proration units as specified in the attached Exhibit "A", all located in Eddy County, New Mexico.
