Attention: Mr. Nae R. Stone

Administrative Order TX-13

Gentlemen:

Reference is made to your letter of March 9, 1962, wherein you request authority to complete your Federal Fullerton Well No. 10 located in the NE/4 SE/4 of Section 13, Township 27 North, Range 11 West, NMPM, San Juan County, New Mexico, with 4 1/2-inch OD non-upset casing and produce the Dakota hydrocarbons through said casing string as a tubingless completion.

Inasmuch as you expect that the Dakota will produce with a gas-liquid ratio in the neighborhood of 100,000 to one, there should be no production problem or waste encountered by your proposed completion.

The British-American Oil Producing Company, therefore, hereby authorized to complete and produce the subject well in accordance with the procedure outlined in your letter of March 9, 1962.

The Commission does reserve the right, however, to review this matter at any time that it appears waste may be resulting from the proposed method of production.

Very truly yours,

A. L. PORTER, Jr.,
Secretary-Director

Secretary and Director

Re: Request For Administrative Approval
British-American Oil Producing Company's
Federal Fullerton No. 10, located 900' FEL
and 1775' FSL, Section 13-T27N-R11W,
San Juan County, New Mexico

Gentlemen:

Rule #107 Casing and Tubing Requirements, states that all gas wells equipped with casing larger in size than 2-7/8" OD shall be tubed. It also states that the Secretary-Director of the Commission may, upon proper application, grant administrative exceptions to this provision.

The British-American Oil Producing Company proposes to use 4-1/2" OD 11.6# J-55 API casing as the production string in it's Federal Fullerton No. 10 to be located 900' FEL and 1775' FSL, Section 13-T27N-R11-W, San Juan County, New Mexico. It is proposed to make this well a tubingless completion. The producing zone will be the Dakota gas sand and fluid recovery is estimated to be 5-10 barrels per MCF of gas. We believe this proposal is consistent with good production and engineering practices and will not cause waste. If the proposal is approved and operational problems are encountered, it would be possible and practical to run 2" tubing in this well. We respectfully request administrative approval of this proposal.
